Some humorous incidents in connection with the affair are being related among the florists. It is said that on Christmas day he exhibited to one of his principal creditors three or four huge rolls of bills and said "They are all for you." He later proceeded to "square up" old accounts by giving one of his checks dated the 26th. He played the same trick to the tune of \$50 on a cigar dealer, and then made a Christmas present of a box of cigars to several of his employees and friends. The condition of the cigar man when he returned to 149 State street with the dishonored check on Friday was simply appalling, and it would be well for Mr. Neal's health not to get within his reach.

Mr. Neal came to Chicago with a bad record, it being pretty well known that he had left New York and Washington in much the same way that he has now left Chicago, and how he managed to secure credit to such large amounts in spite of his record is one of those dark mysteries which will probably never be satisfactorily solved.

He will undoubtedly now seek out some other city in which to play the same game, and florists in other cities are warned to be on the lookout for him. He is a man of about 35 years, a trifle under medium height, medium weight, and when he left Chicago wore a dark brown mustache. He is a very loud talker and great blower. The woman is rather taller than Neal, powders heavily, and has very large black eyes.

The Executive Committee of the Horticultural Society of Chicago held a meeting last Saturday. Nine of the eleven members of the committee, including all the officers of the society, were present, and much work was accomplished. The first regular meeting will be held Saturday, January 10, instead of the 3d as previously announced. It will be held

at the Palmer House. The principal business of the meeting will be to formulate plans for a mid-Lent rose and orchid show.

The Hon. S. M. Emery, president of the American Nurserymen's Association, paid Chicago a visit December 24. While here he called upon Director-General Davis, of the World's Columbian Exposition, and had an hour's interview. Mr. Emery left in the evening for Montana, where he will remain for a month or six weeks.

The regular meeting of the Florist Club will be held next Thursday, the 8th inst. The last regular meeting was omitted owing to the fact that the date fell on Christmas day.

Christmas trade averaged somewhat less than last year. There was a large supply of flowers and prices were 25% lower than at last Christmas. There was a big overstock of violets, white carnations, Roman hyacinths and smilax. Fancy colored carnations sold out clean. A big supply of all roses except American Beauties; an overstock of Perles and Niphetos, and they were sold at less than quotations. All red roses were sold. No demand for poinsettias. Quality of most stock was as good as usual. The overstock of smilax was very large. Less demand than ever before for it. Holly and green sold well at prices equal to those of last year.

As usual many flowers were held back until the last moment and then rushed in on the market. And as it was already loaded the result was an unusually heavy over-stock of many flowers when it was too late to ship.

Charles Reissig cut 112 scapes of *Laelia* among Christmas week. They retailed at the rate of 50 cents a flower.

The practice of loaning plants and giving away flowers from the conservatories of the public parks by the Park Commissioners has of late been aired with some effect by a local daily. In the past anyone who had a "pull" with the commissioners has been able to get about what he wanted, and it has often brought the park greenhouses into competition with the florists, to say nothing of the fraud on the tax-payers. The ventilation has already accomplished some good.

Boston.

The volume of Christmas trade was fully up to the average. The weather for several days preceding the holiday was more like April than December, consequently was most favorable for shoppers, so that the retail stores and street dealers had all they could attend to, and were it not for the constant complimentary reminders of the season, in the shape of decorated calendars for the coming year of grace, which came to hand by almost every mail, one might almost be persuaded that spring had arrived.

Such weather was a boon for the buyers, and in an equal degree a cross and a perplexity for the growers, who were put almost to their wits end to dispose of their unexpectedly bountiful crop at figures consistent with well established and generally accepted traditions. And they went about it in the usual short sighted way. For two weeks preceding Christmas they stored and stored, and anxious buyers were politely refused in the old fashioned style. And when Christmas was come they appeared in droves with their accumulated stock, with complacent and innocent confidence that nobody could detect the age on their goods, in which latter peculiarity they much resembled the

conventional old maid, and they succeeded in their little deception just about as well as that proverbial character. And at the wind-up they were just as persistently anxious to unload as they had previously been to accumulate. On Christmas morning it was indeed a lucky bad that escaped the cutting shears; if it only showed a speck of color that was enough for its thoughtless owner in his desperate determination to sell everything "for Christmas." So when on the day following, winter set in in dead earnest and the greenhouses were dark from the heaping snow drifts, roses and carnations were called for; there were none to be had.

The same old story year after year, and like other respectable stories it has its moral, yet how few there are who learn it or heed it.

It is said that several dealers who had bought recklessly were badly overstocked with certain varieties of flowers, which they were glad to unload finally at almost any price. Of bulbous stock there was a fair supply. Roman hyacinths were quite abundant, paper white narcissus ditto. There were a very few single trumpet narcissuses to be seen, the first cut of the season. Lily of the valley was of good quality. A limited quantity of scarlet Duc Van Thol tulips was also to be had but they were of small size and short stemmed.

Retail trade consisted mainly of orders for loose, long stemmed cut flowers, very few baskets or bouquets being called for.

Christmas "greens" of all kinds were well cleaned up. Mistletoe was very scarce, owing to the non-arrival of several expected consignments. Palm crosses from the south were used in many of the churches, to good effect. W. J. S.

New York.

Business during Christmas week was very good, although prices were considerably below those of last year. Carnations and violets were very plentiful. This was one reason why roses sold for less than last season, as there were very few of these flowers at that time.

Poinsettias, smilax, asparagus and bulb stuff of all kinds was also very plentiful.

There were a great many cypripediums in the market. Lilac made its first appearance Wednesday. There were more flowers sold than in previous seasons owing to the reduction of prices.

JOHN YOUNG.

Leaves of Advice From a Limb of the Law.

(For Young Florists.)

XXII.

MISTAKES OF LAW AND OF FACT.

You seem to be in rather a bad humor this morning. I should say that you had been gathering thistles from your fig trees to judge by the expression of your face. Let me hear what the trouble is.

You say that the Featherly family ordered ten dollars worth of cut flowers for a crystal wedding last week and you sent the best you had in your hot house, and your boy brought back a receipt signed "I. Featherly," but the day after the wedding you meet Featherly who says you occasioned him a great deal of trouble by not sending those flowers. "But I did send them and have a receipt for them." "That's impossible," exclaimed Featherly, for says he "I went to another florist for them at the last moment."

An examination of the receipt shows that the flowers were carried by mistake of your boy to the "Widow Featherly" who signed J. Featherly, and as her brother-in-law's name is John you thought the thing was all right.

The widow Featherly who is accustomed to receive flowers from her admirers was not the least surprised by the arrival of these beautiful tokens of respect and made haste to exhibit her present in her parlor window.

Well you are certainly entitled to the return of the flowers, for the law is always ready to correct a mistake of fact, bear that in mind. Unfortunately the flowers were of a very perishable nature, and although Widow Featherly has no doubt watered and sprayed them very carefully every morning they are all faded by this time. Ha! ha! ha! ha! Excuse my laughing, but it certainly is very funny. "Would laugh on the other side of my mouth if the loss were mine?" Perhaps I would, but come, cheer up. Let us see if we mayn't draw some lesson from this loss of ten dollars in cut flowers.

As I have told you, the law corrects mistakes of facts, but not mistakes of law. A man is presumed to know the law and it will not help you out of a scrape to plead that you "didn't know that was the law." You should make it your duty to know. all the law points involved in your business.

Expecting too much is it? I don't think so. A few hours each week devoted to reading over some popular work on the law of business life would soon make you quite competent to cope with all ordinary questions.

Now suppose you draw on one of your customers for the amount of his bill and he writes "Excepted" on the draft instead of "Accepted," it will do him no good to plead that mistake.

The law is always ready to excuse a little error where there was no malice or intent to defraud. For instance, the omission of a date is not always fatal to an instrument, or the omission of a man's first name, provided he has been once properly described elsewhere in the document.

The law will supply the figure of the year when it is written 189 , provided it is plain that 1890 or 1891 is meant. So too in a will, where a man writes "son" when he is talking about a "daughter." In a word, the law never lets a trifle stand in the way of doing justice between men. But when a law case turns on a question of fact, it must go to the jury. They are judges of the fact always, but the other hand, the judge decides when it is a simple question of law. For instance, he may dismiss a case on the ground that admitting all you have sworn to yet it does not come within the statute. It is a question of fact whether a signature to a note is a forgery or not. The jury may even disregard the evidence of an expert.

It may sound strange to you but laws are made for the protection of those who have brains enough to profit by them. The exception to this is the minor, the lunatic and the habitual drunkard. The law takes them under its special care and direction. Their acts are not binding upon them.

This rule very often works hardship, for a keen and unscrupulous dealer gets the best of a simple-minded and confiding man. However, when the act is so bad as to become a fraud upon the man, the law will undo it. You may not see the justice of this rule. If a man were allowed to plead his ignorance as an excuse for

BERBERIS STENOPHYLLA X.

[REPRODUCED FROM GARDENERS CHRONICLE.]

an illegal act, the world would soon be in a bad way. It would be impossible to do business. A man would drive your cow into his yard, milk her and turn her out again, saying that he found her wandering along the highway and thought he had a right to milk her.

I have heard of a man signing an agreement with a lead pencil, thinking that it would not be binding upon him. But when informed that the pencil signature was good, his ire knew no bounds. That man was ignorant and malicious. Many men sign subscription blanks with the idea that they are not binding upon them and get very wrath when they find that they are bound by their signature.

Don't get a notion in your head that you have any legal hold upon a man. I mean a business friend who advises you to go into a speculation and it fails and you lose money.

Let me impress firmly upon your mind the importance of getting the best advice in the market. That is the way to avoid mistakes in law. It often happens that successful business men are men of very ordination education, but they know

enough to take good advice, to consult those who have the brains which they lack.

When anyone asks you to put your name to a document or take your name from it or in other words to do any act involving your liability for yourself or for others, say no! Go and consult an honest lawyer! Good, I'm glad to see you smile even at the expense of my profession. While a business man may reasonably be expected to know the law of endorsement he can hardly be expected to know the statute relating to limitations, or execution of wills or formation of partnerships.

It is I must confess rather hard for a so-called "lay man" to distinguish between questions of law and fact. In a general way I may say that whether words are libelous or not, whether a paper is a contract or not, whether representations amount to fraud or not, whether entering a man's land is a trespass or not, whether an agreement to try and sell together amount to a partnership or not, all these are questions of law.

But whether the flowers you sell as "English violets" are not the American variety is a plain question of fact. So is the question as to whether certain fruit trees are grafted or not, or whether certain flower seed is the "double variety" or not.

Think these things over at your leisure, there is much profit to be drawn from them. The loss of the ten dollars is a mere trifle provided you profit by the experience. I would advise you always to be extremely careful in the delivery of your merchandise, for being so extremely perishable it often becomes worthless before you can recover possession of it.

Working as you do in a pure atmosphere there is no reason why you should not become a deep thinker, almost a philosopher like old Father Adam the first gardener, who had brains enough to give names to all the animals and have dominion over them all.

UNCLE BLACKSTONE.

Berberis Stenophylla X.

North of New York this is a case of sour grapes, but south of Philadelphia it is grateful as Alexandria muscats. It is a garden hybrid, and one of the most beautiful and elegant little evergreen shrubs in cultivation; free-growing and free-blooming, but, unfortunately barely hardy on Long Island. In European gardens it stands in the front rank of the genus.

Its parents are Berberis empetrifolia, a little plant from the Straits of Magellan, but infrequent in cultivation, and B. Darwinii from southern Chili, and one of the most admired of all the species.

Berberis stenophylla has stiff, but slender arching stems and branches: abundant, deep, glossy green, small mucronate leaves, and little clusters of rather large, showy, golden yellow blossoms that are produced abundantly in spring, with a scattering few again in fall. The plant suckers a good deal from the root, spreading, and forming broad clumps.

We have had this plant out of doors for some years and by mulching it with forest tree leaves in winter manage to save it fairly well, but in case of accident we also lift a clump in fall and winter it in a cold pit and plant it out again in spring, and the plant thus preserved is always our finest specimen. W. F.

COMMERCIAL BOTANY of the Nineteenth Century, by J. R. Jackson, Curator of the Museums, Royal Gardens, Kew, England, has been issued by Cassell & Co., London.

Address THE AMERICAN FLORIST CO., Chicago.

THE WORLD'S COLUMBIAN EXPOSITION.

The great exposition of 1893 will give the florists, nurserymen and seedsmen of America a splendid opportunity to show to the world the wonderful progress made in the last ten or fifteen years, a progress regarding which the public in general has only the vaguest information.

The growth of the florist's business during the past ten years has been truly phenomenal; that every one in the trade knows, but those who are not in the trade do not know it, and in the nature of things can not be expected to know it, until the matter is placed before them in some visible shape. And until the facts are placed before the public in a comprehensive manner the trade will not receive the consideration and attain to the dignity to which it is really entitled. The Society of American Florists has done much to bring the growing importance of the trade to the public eye and ear, but if the opportunity of 1893 is made full use of, more will have been accomplished in this direction, in that one year than in the whole history of the society which has done so much for the florists of America.

That the florists of this country are sufficiently enterprising to make full use of this great opportunity to benefit themselves and at the same time materially aid in magnifying the importance of the profession in the public mind, we are fully assured, and that the time for discussion of plans whereby the greatest results may be secured has arrived, there can be no doubt.

As Americans we are all interested in seeing that the exposition is a credit to America, and as horticulturists we are all interested in seeing our special department a credit to American horticulture.

We are assured by Director-General Davis that the Horticultural Department of the Exposition will be organized soon after the date this issue bears, and we have reason to believe that the accomplished gentleman whom the Society of American Florists, the American Nurserymen's Association and the American Seed Trade Association have endorsed for that position, namely Mr. James D. Reynolds of Riverside, Ill., will be selected as its chief. With Mr. Reynolds at the head of this department every subdivision will receive the attention its importance merits and will be moulded into one harmonious whole. Having been educated as a civil engineer and followed that profession for some years prior to entering the ranks of the horticulturists; being also familiar with the details of landscape gardening as well as those of floriculture, and a man of fine executive ability, he is peculiarly well fitted to discharge the duties of chief of the department. With such a man at the helm there can be no reasonable doubt

of the success of the department in properly showing to the world the resources of and the progress in American horticulture, if material is provided.

One wholesale grower of plants has assured us that he will expend \$2,000 in making a display at the exposition, and will feel that it will be the cheapest advertising he can buy. While this is probably an exceptional case we know that the far-sighted men in the trade everywhere will not fail to be represented at the exposition by specimens of those plants, trees, shrubs, etc. that they hope to increase their trade in, well knowing that they can have no better advertisement of them than the privilege of exposing them to the inspection of the millions who will visit Chicago in 1893.

It is time now to lay plans for your exhibit at the exposition. It is time to be revolving the matter in your mind, and it is time now to express your views upon the classification and arrangement of the exhibits in the horticultural department, through the columns of the AM. FLORIST.

It has been suggested that there be shown examples of landscape gardening. Certainly an excellent suggestion, and now that ample space is assured through the location of the exposition at Jackson Park it is quite feasible if preparations are made at once. It is doubtful if anything could be more interesting and instructive to the visitors at the exposition. These should be of different types, and should include examples of planting for city lots as well as larger grounds. An exhibition of this kind would not fail to greatly increase the demand for such plantings.

Let us have further suggestions on matters connected with the exposition.

THE DAY after Christmas we received a box of chrysanthemum flowers which had been sent us by Mr. Arend Brandt, Newport, R. I. They were large fully developed flowers. Each bloom bore two labels, one giving the name of the variety and the other stating the time the cuttings were placed in the sand bed. We append a list of the sorts, giving after each, in parenthesis, the date the cutting was taken: Nesima (August 20), Mrs. Frank Thompson (August 20), W. H. Lincoln (August 20), Mountain of Snow (September 27), Christmas Eve (September 6), Lilian B. Bird (September 6), and a number of unnamed seedlings, propagated at some one of the dates named.

There were also in the box a few whole plants, showing the height of same, which did not exceed one foot, though the flowers were nearly equal in size to those on large plants. Mr. Brandt states that he had several thousand plants of chrysanthemums in full bloom for Christmas.

We have received from Mr. Joseph Linfoot, College Hill, O., specimen blooms of

a bouvardia of a very dark scarlet. The color is excellent, deeper than in any bouvardia we have yet seen. No letter or explanatory note accompanied the flowers, nothing but a business card, hence we are unable to give name of the variety or any definite information regarding it.

A VERY WELL written article on the chrysanthemum appears in the issues of the *Sunny South* for Dec. 13 and 20.

LOS ANGELES, CAL.—The net receipts from the recent chrysanthemum fair were \$1,063.30.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (each word) on each insertion. Cash must accompany order. Plant advts. not admitted under this head.

SITUATION WANTED—As gardener and florist; can give good reference as to character and ability. W. W. DEGRAU, Hudson, Sumit Co., O.

SITUATION WANTED—By gardener and florist; single, age 31, in private or commercial place, as foreman. Scotch, good references. Address: C. J. FLORES, Box 29, Kalamazoo, Mich.

SITUATION WANTED—By florist thoroughly experienced in all branches, age 29, first class testimonials. State particulars, address: C. J. FLORES, Box 29, Kalamazoo, Mich.

SITUATION WANTED—Single man having 12 years experience on private place; first class references. Address: C. J. FLORES, Box 29, Kalamazoo, Mich.

SITUATION WANTED—By young single man as florist, 9 years experience; good rose grower and first class at cut flower and design work. Good references. Address: W. M. CARE, American Florist, P. O. Box 151, New York City.

WANTED—A man for herbaceous department of a large nursery. This is a great opportunity for a sober, steady and energetic man. Address with references: W. M. CARE, American Florist, P. O. Box 151, New York City.

WANTED—A good reliable single man to take charge of greenhouses, one that is accustomed to taking care of palm, fern and decorative plants. No others need apply. Address: CHAS. J. CARE, American Florist.

WANTED—An active, progressive greenhouse grower, who could at times assist in order and packing department of a large commercial place. Give references and particulars to: G. G. LOCK BOX 1618, Philadelphia.

WANTED—A gardener, commercial, must understand growing roses, plants and vegetables, a German married man, previous experience, stable salary and experience. J. T. BARTLEY, Oconomowoc, Wis.

WANTED—Gardener to take charge on or before the first of April of a private place near 100 miles of New York; must be thoroughly up in growing of vegetables, small fruit, flowers and grapes both in open ground and under glass; will have to board his men. Address giving experience, references, age, nationality and wages. I. G. POSTON Box 59, New York City.

FOR SALE—A country home with greenhouse, in a prosperous Connecticut town. For particulars address: BIVOTT, care Am. Florist.

FOR SALE—Set of the reports of the Illinois State Horticultural Society; also set Illinois Agricultural Reports, set U. S. Agricultural Reports. Address: Mrs. J. H. McINN, Austin, Ill.

FOR SALE.

Five greenhouses built within three years; supplied by own water works; no more than five miles from 6,000 inhabitants, eight miles from two cities; population 250,000; a fine line of fruit and shipping facilities. Small capital required. Houses well stocked with plants for cut flowers. One of the best places in the country for growing cut flowers, such as violets, etc. Good reason for selling. J. D. JARRETT, Woodville, Allegany Co., Pa.

"THE RAINBOW."

Cut blooms of "THE RAINBOW" bring a higher price than paid for any of the hybrid teas in the San Francisco market. Strong plants from out doors in best possible condition for shipment.

Per dozen, \$4.00. Per hundred, \$25.00. Per thousand, \$200.00.

Special rates given for quantities from 5,000 and upwards.

JOHN H. SIEVERS,

25 Post Street,

Mention American Florist.

SAN FRANCISCO, CAL.

PHILADELPHIA.—A daily paper announces the death of Jacob Cocklin, at his home in York county, at the ripe age of 93 years. Mr. Cocklin was one of the pioneer nurserymen of this state, and was well known among the older pomologists in this country, having been one of the first Americans to undertake the improvement of large and small fruits. Among his productions were "Cockling's Favorite" and "Triumph of Cumberland" cherries and the "Cumberland Triumph" strawberry. It is nearly half a century since he retired from active business.

MILWAUKEE.—Benjamin Gregory, proprietor of the Humboldt Avenue greenhouses, is not listed in the trade directory, and should be added.

DAISIES of the finest strain from seed-
bed \$3.00 per 1000.
JAMES HORAN, FLORIST,
BRIDGEPORT, CONN.

Extracts From Poor-man's Primer.

"Father, who is that strange man?"
 "That, my son, is the fool killer."
 "What does he do?"
 "Removes the careless, unwise and slipshod business men and others."
 "Does he come often?"
 "Yes, in his lots of business."
 "Why, don't he go everywhere?"
 "No. He always seems to avoid growers of cut flowers (amateurs as well as professional) who sell to the retail florist who runs his business on WIND and pays in the same coin."
 "Pa, is it true that a sucker is born every minute?"
 "Yes, I think about three to the minute this year."

"How does this kind of work help honest men?"

"It helps drive nails in their coffins and plant them deep."

"Should anybody really write to reliable references and try to know if their customer has money to pay with?"

"O, yes indeed, always, unless they are florists."

"Pa, is it the law that a man who don't pay well has the most credit and that only the one whose record is good must pay cash down?"

"No, it is not really the law but only florists' custom."

SPRINGFIELD, MASS.—I wish to make a correction. There is no one here by the name of Father, it should be Grout. He is a carnation grower and makes a specialty of Grace Wilder, devoting one whole house and part of another to them, both houses being 100x20 ft. A. B. COPELAND.

— ORIGINAL AND LARGEST GROWERS OF —

LILIUM HARRISII, BETTER KNOWN AS THE BERMUDA EASTER LILY.

— BULBS NOW READY FOR DELIVERY. —

THE BEST IN THE WORLD FOR FORCING FOR WINTER FLOWERS. WE OFFER ONLY STRONG FIELD-GROWN BULBS FROM OUR OWN GROUNDS IN BERMUDA.

COPYRIGHTED, 1890, BY F. R. PIERSON, TARRYTOWN, N. Y.

From a photograph taken the week before Easter, 1890, showing a view in one of our new iron greenhouses, here at Tarrytown, 20 feet in width by 140 in length, of a crop of Liliium Harrisii in full bloom. This house produced over 15,000 flowers for Easter.

This is not only the best by far of all lilies for winter blooming, but it is one of the most profitable flowers that can be grown by florists. It is very easily handled, and the flowers being especially effective for decorative purposes, always command large prices. From its name some have thought it was a bulb for florists' use for forcing for the Easter market only. This is not exclusively so; it derives its name from the fact that, in Bermuda, grown in the open ground, it blooms at Easter time—hence the name—Bermuda Easter Lily—but by growing it in this country in the greenhouse, with successive lots, it can be had in bloom all the winter from early in December until after Easter; in fact, by special culture, all the year round, or as long as cut flowers are in demand. The fact that it can be forced into bloom by the Christmas holidays adds particularly to its value, as it fills in at a time when flowers are usually scarce and in great demand at high prices, but to accomplish this the bulb must be potted early in August, something depending upon after treatment and the temperature the bulbs are grown in.

For this purpose our Bermuda-grown bulbs are indispensable, as in Bermuda the bulb reaches its highest development, and ripens off perfectly, and is ready for shipment usually by the middle of July—before bulbs in our own country have hardly begun to make their growth. Our bulbs being grown in the open ground, in a climate naturally adapted for their perfect growth, are particularly strong and healthy at any time.

The extent to which this Lily is being forced for winter flowers will be shown by a sale made by us to a large New York grower, who purchased 30,000 bulbs for his own use. We hear it said occasionally that Liliium Harrisii flowers will not keep—this is owing to improper handling. If cut as soon as open they can be kept for more than two weeks, if in a proper place. It bears shipping splendidly, as the two following letters will show. These were written acknowledging the receipt of flowers shipped last Easter.

J. L. Russell, Denver, Colo., writes: "The Lilies came in excellent shape. I don't think I lost one; it is a pretty good recommendation for your packing." The Fort Worth Nursery Seed and Canning Co., Dallas, Texas, writes: "The Lilies arrived in perfect condition, and we must compliment you on your packing. We would not have thought they would have carried so far packed dry."

THIS VALUABLE LILY IS OUR SPECIALTY.

We grow the bulbs by the acre on our own grounds in Bermuda. We were the first to grow it in large quantities and to offer it at reasonable prices, and we have always been recognized by the trade as **HEADQUARTERS FOR THE BERMUDA EASTER LILY**: supplying the trade as we do, both in this country and in Europe, and we hold by far the largest and the controlling stock of the genuine variety in the market.

The extent of our operations in this bulb alone will be best understood when we state that we expect to sell from OUR CROP of 1890, over

— HALF A MILLION BULBS. —

Be sure you get the genuine Liliium Harrisii. In order to secure "the true variety," purchase your Bulbs from original stock, which is known to be pure. The value of this Lily has led unscrupulous or ignorant parties to plant L. Longiflorum in Bermuda, planting it with Harrisii to increase their stock rapidly when Harrisii was very scarce, thus mixing the stock, irretrievably, thereby rendering it absolutely valueless for forcing, and we have known instances where these mixed bulbs have been sold to large growers as the genuine variety, where large loss has resulted, and dealers should look with suspicion on bulbs offered at prices less than market rates, as the supply has never yet met the demand. "Mixed Bulbs" only being offered at reduced rates.

Large growers or dealers in this bulb should write us for special prices, stating quantity of bulbs desired, and we will give lowest estimate on the same by return mail.

F. R. PIERSON & CO., TARRYTOWN, NEW YORK, U. S. A.

OUR FREESIA BULBS ARE NOW READY FOR DELIVERY. They are of unusually fine quality, nearly twice the size of Bulbs usually sent out. Intending purchasers should write us for samples and prices, stating quantity wanted.

News Notes.

RICHMOND, VA.—Hill Brothers, florists, 515 West Broad street, should be added to the list in the directory.

CHIEFTERTOWN, MD.—The wife of R. G. Nicholson, proprietor of the Little Grove Nurseries, died November 28.

SOUTH NORWALK, CONN.—F. S. Lyons has just completed two new greenhouses, one 50x20, the other 97x9. All heated by hot water.

CLEVELAND, O.—Charles Erhardt has opened a floral store at 358 E. Erie street since the publication of the directory and should be added to the list.

LINCOLN, NEB.—The winter meeting of the Nebraska State Horticultural Society will be held in this city January 13, 14 and 15. Special rates are expected from all the railroads in the state.

BUNKER HILL, ILL.—T. Summerville's greenhouses were destroyed by fire the morning of December 18. Loss about \$1,200. No insurance. The fire originated around the heating apparatus.

JERSEY CITY, N. J.—Florist Stone, of Greenville, who was a short time since arrested as an accessory to recent burglaries here, has been fully exonerated by a confession of the leader of the gang who was caught last week.

PITTSBURG, E. W. Williams' greenhouses at Knoxville were destroyed by fire at 2 o'clock the morning of December 27. The fire originated from a defective flue. An adjoining frame building was also destroyed. Loss on buildings \$4,500, and on stock \$2,000. No insurance. A meeting of the Pittsburgh and Allegheny Florists' Club will be held at Ludwig & Richter's store, 14 Federal street, Allegheny, Thursday, January 8, at 8 p. m.

UTICA, N. Y.—During the past season Samuel Davies built four houses, each 100 feet long. Two were for roses, one for violets and one for carnations. His house of American Beauty roses have done extra well and he is satisfied that this is a profitable rose to grow if handled right. Violets have also done finely this year with him. He will later send to the FLORIST for publication a record of blooms cut from a given number of plants during the season.

Rooted Cuttings Carnations.

We offer **EDELWEISS**, a pure white sport of Chester Pride for the first time this season, @ \$1.50 per dozen; \$10.00 per 100. Send for circular of leading varieties and several new seedlings of merit.

I beg to announce to the trade that I shall be prepared to distribute this magnificent **NEW WHITE CARNATION** on the 10th of February, 1891, and that the price will be \$12 per 100, and \$100 per 1000, for strong well rooted plants from the cutting bench. Favorable special rates will be allowed on large quantities. Cash or its equivalent should accompany orders from unknown correspondents.

Send for descriptive circular of this and other sorts. Parties wishing a few flowers of Lizzie McGowan can have them by enclosing twenty-five cents in stamps.

ADDRESS

H. E. CHITTY, PATERSON, N. J.

CONSTANCY.

We claim this to be the best winter-blooming long-stemmed scarlet Carnation that is now offered for florists and amateurs. It is a child of The Century, containing blood of Portia, and possessing its color, but with larger flowers; not running to so many small, inferior florets as does its parent after the first flush of fall bloom. It is a glowing scarlet, fringed; growth strong, and free from disease, being dark green and luxuriant; and will exceed its parent in number of blooms to the same space occupied. Strong plants from 2 1/2-inch pots in February, at \$2 per dozen; \$15 per 100. Special discount on large orders. Sample blooms of my four splendid new winter-blooming Carnations **GOLDEN GATE, WM. F. DREER, J. R. FREEMAN** and **CONSTANCY** will be mailed to any address on receipt of 35 cents.

CHAS. T. STARR, Avondale, CHESTER CO., Pa.

LIZZIE MCGOWAN.

I will be prepared to distribute my **NEW WHITE CARNATION** Feb. 10, 1891, and the price will be \$12 per 100, or \$100 per 1000, for Rooted Cuttings propagated from **STRICTLY HEALTHY PLANTS**. Special discount on large orders.

Cash or its equivalent should accompany orders from unknown correspondents. Send for descriptive circular. Parties wishing a few flowers of this **GRAND Carnation** can have them by enclosing twenty-five cents in stamps.

NEW CHRYSANTHEMUMS.

MILLER'S "WORLD'S FAIR SET."

We have been to great expense, sparing neither time or money in collecting this unequalled set. Characteristic of the leading city of this country, we have named them in honor of our representative citizens:—FERD W. PECK, or GALLIA, and J. V. FARWELL, or W. N. RUDD, were two of the set of six seedlings that took the \$100 prize at Indianapolis; S. W. ALLERTON and GEO. R. DAVIS were raised by Monahan of Philadelphia, who has originated some of our finest varieties. CYRUS H. McCORMICK was raised by Jamieson, and is one of the finest of the present year's novelties. The remaining eight are the XXX selections of 1800 seedlings that were raised by the leading grower of this country. In comparing

them with the different sets sent out this year we unhesitatingly say that they are second to none.

LYMAN J. GAGE, a grand late white.

GEO. R. DAVIS, ox blood red, Wheeler type.

J. V. FARWELL (W. N. RUDD), Lavender without, rosy violet within, a fine keeper.

CYRUS H. McCORMICK, Dark deep yellow, shaded bronze red.

ANDREW McNALLY, Crimson scarlet, fine for exhibition.

POTTER PALMER, White seedling from L. Canning, very large.

FERD W. PECK (GALLIA), Rosy pink, fine exhibition variety.

CHAS. H. WACKER, Crimson scarlet, profuse bloomer.

ROBT. A. WALLER, Chamoise yellow, extra.

CHAS. T. YERKES, Bright scarlet and gold, fine cut flower variety.

S. W. ALLERTON, An immense white fine for pot culture.

MARTIN A. RYERSON, An improved Mrs. Frank Thompson.

FRED S. WINSTON, Cardinal and Indian red of the Carnegie type.

SET OF 13 FOR \$6.

Orders booked for the above and also 100 of the leading exhibition and cut flower varieties to be delivered early in January. Send for descriptive list. "Get the best, grow the best, and keep up with the times," is our motto.

Orders booked for the PINK OSTRICH PLUME CHRYSANTHEMUM, LOUIS BOEHMER, at market price.

GEORGE W. MILLER, 1748 North Halsted St., CHICAGO.

DREER'S DOUBLE PETUNIAS

Now Ready for Delivery, our Select Strain of Double Petunias, in good, strong, healthy stock plants, in 3-inch pots.

The strain of Petunias we offer is too well known to require much description— suffice it to say, that the varieties offered this season are fully equal to our former introductions. The advantage of securing stock early in the season will be readily appreciated, as a limited number of plants will produce a large number of cuttings.

We offer 15 named varieties, at \$1.50 per dozen; set of 15, for \$17.50; \$10.00 per hundred.

Seeds of Double Petunia, from the finest fringed and blotched varieties, saved on our own grounds, crop 1890. Per trade pkt. of 750 seeds, \$1.

See Our New Trade List, offering all the good things of the season, will be ready early in January.

The Climbing Perle.

During a recent visit to Flushing I was very much pleased with the climbing Perle des Jardins as grown by "The John Henderson Company." This, as its name indicates, and as readers of the AMERICAN FLORIST are aware, is a sport from the Perle, and shows all the characteristics of its parent. It will undoubtedly prove of much value to all who grow or admire climbing roses. It vigorous growth, charming color and freedom of bloom will undoubtedly win it a place at the head of the list of climbing roses.

Mr. Anderson is also enthusiastic over the merits of a new ever-blooming gardenia, of which they have control. This will probably prove a valuable acquisition. In New York gardenias are becoming a very fashionable flower for boutonnières, as they have long been in England, and certainly no flower is more suited for the purpose. They are of very simple culture and should be more generally grown. P. M. P.

Scarborough, N. Y.

The Poinsettia.

ED. AM. FLORIST.—Will some reader of the FLORIST please give best methods of growing the poinsettia? The principal thing that bothers me is to keep the leaves from falling off. D. W.

Plants and Bulbs.

I have the following plants and bulbs in large quantities and offer them at very low prices to make room for other stock. They are all strong and mostly out of 2-inch pots:

Acyranthus, 2 sorts	2½ cts

TUBEROUS BEGONIA SPECIAL.

OPEN LETTER TO FLORISTS No. 3.

Dear Sir:—

The Xmas Garden seemed to please you very well, judging from your many-fold responses. But the January issue will be still finer. A holly branch in colors adorns the cover.

A 15x16 color lithograph of seedling begonias makes the frontispiece unquestionably the finest floral plate yet issued in America. In fact, this is a **Begonia Special**, many pages being devoted to the Tuberous Begonia by our ablest writers and growers. The superbly illustrated series on **JAPANESE EDIBLE PLANTS** begins in this issue. A splendid assortment of other illustrated matter completes the finest issue of any American horticultural journal up to date. We made you a present of the Xmas issue: Price of this one **20 cts.**, which may be deducted when you subscribe for the year.

Remember our offer to Florists: A commission of 75 cents (net price, \$1.25) if you act as our agent, and order two subs. to begin with, as proof of good faith.

Yours truly,

THE RURAL PUBLISHING CO., Times Building, NEW YORK.

In Club with The American Florist, both one year, for \$2 50.

LITTLE'S ANTIPEST

Valuable Discovery of the 19th Century.

SILVER MEDAL AWARDED

CALIFORNIA STATE FAIR OF 1890.

This preparation is a sure destroyer of the **Scale, Woolly Aphis and Insect Pests** of any and all descriptions. It may be as freely used in the conservatory, garden and greenhouse as in the orchard or vineyard. It is non-poisonous and harmless to vegetation when diluted and used according to directions. It mixes instantly with cold water in any proportion. It is **Safe, Sure and Cheap.** No fruit grower or florist should be without. Send for circulars and price list.

IMPROVED FARM AND GARDEN TOOLS FOR 1891.

BUTTEL, Both Horse and Hand, **THAN EVER**; better and more money saving. We can not describe them here, but our new and handsome catalogue is free and interesting. A good number of new tools will meet your eye there. Among these: **Gardener's Harrow**, Cultivator and Pulverizer, combined, adjustable teeth; **Market Gardener's & Beet Grover's Special Horse Hoe** with Pulverizer; **Special Furrower**, Marker and Ridger, adjustable wings; **Sweet Potato Horse Hoe**, four tooth with vine carrier; **Heavy Grass Edger and Path Cleaner**; **new Nine Tooth Cultivator and Horse Hoe** combined; **Special Steel Leveler and Pulverizer** combined; all interesting, nothing we have ever made so practical or perfect. Some improved things too are grafted upon our older favorites. A capital **LEV-ER** **WHEEL**, instantly adjustable for depth, is a great feature; put on all "hi goods unless ordered other wise. Nor have our Hand Seed Drills been forgotten in the march of improvement, nor our Double and Single Wheel Hoes, Garden Plows, Grass Edgers, Etc. Some of them are greatly altered for the better; yet do not forget that no novelties are adopted by us without actual and exhaustive tests in the field. We therefore guarantee everything exactly as represented. Send for Catalogues now.

S. L. ALLEN & CO., Philadelphia, Pa.

IMPROVED GIANT VERBENAS.

This magnificent strain of Mammoth Verbena has been produced by five years of high culture and careful selection, and is justly claimed to be the finest in cultivation. Florets measure over an inch in diameter, borne profusely in large, ball-like umbels. Finest colors. Don't fail to sow it. Trade price, 25 cts.; 5 pats. & 6 cts.; 6 pats., \$1.00.

is now published and may be had on application.

FRED. ROEMER,
SEED GROWER,
Queßlinburg, Germany.

Foreign Notes.

THE ROYAL HORT. Society of England has appointed a committee to establish a memorial commemorative of the labors of the late Shirley Hibberd.

A FRENCH journal recommends the use of sulphate of iron in a state of powder to destroy moss on lawns. It should be used at the rate of one-half pound of the sulphate to 120 square yards of surface. In a trial at the rate above indicated the moss entirely disappeared in six weeks and the grass had grown with great vigor.

THE EDINBURGH chrysanthemum show was visited by 35,000 people during the three days. There was a surplus of about \$600, though \$1,500 was expended for music in addition to prizes and other expenses.

THE ANNUAL MEETING of the National Rose Society of England was held December 9. During the coming year an early show of ten roses will be held June 23, general exhibition at the Crystal Palace July 4, and Provincial show at Hereford July 16.

Long Island Notes.

BY WM. FALCONER.

SCARLET BERRIES—Out in the snow bushes of Berberis Thunbergii, thickly arched with coral fruit, give a warm glow to the gardens otherwise now cheerless enough.

HEAVY SNOW has spread apart and weighed down the branches of your retinoropas, thujas, yews and other nice evergreens, go out among them with a bean pole and shake the snow off the branches, lest your handsome shrubs retain their spread apart appearance after the snow passes away.

LEPTOSYNE MARITIMA from the Californian sea coast is in good bloom. Its large sunflower-like yellow flowers are a welcome addition to our winter blossoms. It is easily raised from seed and six months' old plants bloom freely.

GROWLING.—Page 305.—Please Mr. Evrding, don't deny us one of the pleasures of life—the privilege of growling. Till the Millennium anyway, let us growl.

MISTLETOE—A friend in Tennessee sent me a barrel of mistletoe which I shared with my neighbors, and I was astonished to find many among them who had never before seen the festive parasite, notwithstanding its delightful yule associations. It is not indigenous, so far as I know, on Long Island.

KALANCHOE CARNEA.—It is in bloom again, pink, fragrant and pretty. I presume it has come to stay, it is so easily grown and blooms so full and surely, and will be indispensable to the private conservatory, but I don't think ever much of a market plant.

THE TREES OF NORTH EASTERN AMERICA.—(Putnam, New York.)—If you are too hard-shelled a florist to care anything about our native trees yourself, get this book and give it to your children. It is just such a book as our hearts have yearned for many a day, a plain popular story, with simple but pertinent descriptions, and clearly defined engravings of the foliage and often the fruit of the different trees, enough to enable anyone to distinguish them at a glance. The author is Mr. Charles S. Newhall.

CLITORIA MARIANA.—The Brooks sisters of Sorrento, Florida, send me flowers and seeds of this very pretty little vine. They write, "It grows here in the pine woods and also in the bay-heads where, in the latter place its flowers are of a creamy color on account of shade, and in the former, it is sometimes pink or lavender. It is a very beautiful flower, excelling the sweet pea in loveliness. The flowers are sometimes two inches across. It is a perennial, and begins to bloom in April or May and continues into August." It is not uncommon in cultivation in greenhouses in the north, and although

the pea-flowers are large, showy and beautiful, they are not plentiful enough to justify us in growing it in quantity.

THUINERGIA LAURIFOLIA is a rapid growing vine from India. I have it planted out in a box at the warm end of a greenhouse, and let it spread along and droop from some vines near the top of the house, and it now is in full bloom. It has hundreds upon hundreds of large, pale blue flowers in the drooping fascicles—a beautiful sight. But its only worth is for the decoration of the greenhouse, as cut flowers its blooms are useless, the individual blossoms don't hang on to the clusters for long after they are cut, and they wilt in a day after being severed from the plant; besides, although the color is beautiful by day it is very poor with night light. This plant blossoms full twice a year, in summer and in winter. The only care it gets is watering and cutting it in and keeping it thin as necessary.

AUGUST-STUCK CHRYSANTHEMUMS.—Your reference to these, page 360, prompts me to say that we grow a few hundred of them and find them invaluable for December blossoms. While we encourage stocky growth and substantial foliage, we discourage early blooming by keeping these small plants plunged out in cold frames as long as we can conveniently and safely, usually into November. The plants are in four and five inch pots, and bear from one to five flowers each, and they are good flowers. And they are very handy to stand about in the greenhouses where there is a little empty patch or corner, or to pack to send away, and a joy to the ladies who sell plants at the church fairs, for they are a capital sale for this purpose and in bloom at the proper time. Mrs. Langtry, Moonlight, Christmas Eve, Hon. J. Welsh, Necesia and Frank Wilcox were among the latest we had.

CYPERUS PAPYRUS, THE EGYPTIAN PAPER REED.—At Staten Island, the other day, I noticed that Mr. Tricker was raising it from seed, he had two large flats filled with nice little seedling plants. Planted out in summer in deep rich open soil kept abundantly moist, it grows rapidly and makes a very imposing clump in the flower garden and is very appropriate in the vicinity of water. Although often treated as purely an aquatic, the finest specimens of it I have ever seen were planted out in the open garden with cannas and musis.

NYMPHOLEA ZANZIBARENSIS.—Mr. Tricker, who also makes a specialty of fine flowering aquatics, showed me some shoots of this tropical pond lily at rest. "But, indeed," he remarked, "I don't care much whether I save them or not, because I can get it up so readily from seed, and seedlings bloom freely the first year."

NELUMBUM SPECIOSUM, the Egyptian

Lotus is hardly with him in the open air tank basin, but he is careful always to have the water deep enough that the ice never forms thick enough to come within reach of the tubers. In this same way I have found *Nymphaea flava*, the Florida yellow pond lily, and *Aponogeton distichyon*, the delicious Cape of Good Hope pond weed, also hardly.

MIGNONETTE.—Mr. Tricker nips out the point of the stout main shoots so as to get well developed side shoots; and in the case of weak main stems he rubs off the side branches in order to invigorate the leader. He likes Machel.

ELÆAGNUS LONGIPES will probably be pushed considerably next spring, and it deserves to, for it is a highly ornamental and useful Japanese hardy shrub. But we have four names, viz. *longipes*, *edulis*, *Simoni* and *umbellatus* and two distinct plants and they all seem to be very much mixed up together, and in this country so far as they have come under my notice, all have been grown as *longipes*. Of course our nurserymen and florists import a deal of young stock from Europe and many rely upon the names in the European nurseries. And here is a case in point. A firm who has sent thousands of *elæagnus* to this country has the genuine *longipes* under the name of *edulis*, and this is all right for *edulis* is a syn. of *longipes*, but the same firm has *E. umbellatus* under the name of *longipes*, and it is here where the trouble comes. The true *longipes* is the dense bushy grower which begins to bear fruit when two years old and only two feet high; and the *umbellatus* (or *Simoni*), as I have it from one source) is the vigorous willow-like shrub that often attains a height of ten feet without showing the least inclination to bear fruit. *Longipes* is the better species by far.

One Dollar Each for Carnation Flowers.

Yes, I did tell Ed Lonsdale that carnations (Divine flowers) will be produced four inches in diameter and that they will be sold for one dollar each within eight years. I think I did say 10 years, but I will take off two years.

Somebody says they have carnation flowers already three inches in diameter. That is good, very good, but carnations are not modeled out of clay directly, or my four-inch flower would be figured in the A. F. next week. To obtain a flower simply four inches in diameter is not a difficult task; in fact all the Malmaison varieties are fully four inches in diameter when well grown, but they are not what my four-inch carnation ideal is.

Here is my model:

First. The flower is to be not less than four inches in diameter. The petals must be thick and regularly disposed. The color, any color. It must have a decidedly sweet perfume.

Second. The calyx is to be not less than half the diameter of the flower; it must be sufficiently large so as not to burst during the period of the petals emerging from it.

The stem must be in proportion to the size of the flower, and long enough to be cut not less than eighteen inches long.

BUNCHING CARNATIONS

The lower end of the stem not thinner than an ordinary lead pencil. The stem to be clothed with leaves as are the best varieties to-day, excepting that the lower leaves are to be eight inches long, one-half inch wide, covered with a glaucous surface, which only carnations have. The leaves to be curved in that lovely way already possessed by the Divine flower.

Such flowers will sell for \$1 each.

I will further predict that we shall have exhibitions where carnations will be the leaders and that will be within six years.

There is a brilliant future for the carnation and I hope I may live to make at least one more brick for the structure.

JOHN THORPE.

Bunching Carnations.

Bunching carnations seems a simple matter enough, yet we often find them resembling more a ball of color than a bunch of flowers, or as a noted grower (who delights in seeing his favorite flower at the best advantage possible) says, "they are pulled, the flowers made even carefully, and then tied up close like a broom."

Now this is rather a detriment to their sale, and as long stemmed carnations are being used more and more every year, it is a matter of wisdom on our part to not only grow them to the highest perfection, but to present them to our customers in an attractive shape.

The grower sending to a retailer or commission house should put his blooms in bunches of twenty-five. Fifty makes the bunch too large and heavy. There

will of course be a difference of a few inches in the length of stems. Now in place of making the flowers even make the bottom of the stems even and tie as low down as possible. Tied in this manner a bunch being held up for inspection shows each individual flower and is fully 50 per cent more satisfactory than the compact tightly bunched one.

When carnations are four inches in diameter and bringing a dollar a piece it will be necessary to put a few sprigs of foliage in the bunch to even matters up a bit. A little foliage is a great improvement now, but until dealers are willing to count each sprig as a long stemmed flower no grower could afford to use them at the prices they are often sold.

ALBERT M. HERR.

Carnation Lamborn.

I have recently received several private letters calling my attention to an article which appeared over my name in the *AMERICAN FLORIST* of October 1 last, in which I made a statement to the effect that I had said good bye to Hinze's White carnation and instead had somewhat largely planted Lamborn. Most of these letters also remind me of an additional remark made in my article which appeared in the *FLORIST* November 13, in which I emphasized the above in a forcible manner by saying that up to that time I was more than pleased with the move and considered it the best one that I had made in carnations in a long time. One of the letters referred to came from England, the others mostly from distant points and all expressing such intense interest in the subject that it would have

SABAL PALMETTO

afforded me great pleasure to have answered each separately, but as that would have been quite a tax on my time I ask the indulgence of the FLORIST to permit me to answer them all together as briefly as possible through its pages.

The two side benches of my new iron house are occupied with this variety, also the largest part of a side bench in another house, there being altogether a little more than 3,500 plants. From this number of plants, since October 1, I have gathered within a mere trifle of 10,000 flowers, mostly long stemmed. These flowers with the exception of 1,500 which I shipped to New York have been sold and used in my own store. For those which I sent to New York the consignees allowed me \$2 per hundred, less of course the necessary expenses, but the long stemmed ones sold in my own store have all brought 50 cents per dozen, except the day before and on Christmas day, when the price was 75 cents per dozen. But quite a considerable number were gathered without stems, for making the groundwork of funeral pieces. Being anxious to get an idea of what these

short or stemless flowers netted me, I requested the young man in my store who superintends all the making up to keep an exact account with several floral pieces, charging everything against the piece; then allowing a fair valuation for the roses, hyacinths, freesias, mignonette and other flowers used in finishing the work, cost of frame, moss, time and everything else, we found that the carnations in nearly every instance netted a little over ten cents each. Now as these flowers used for funeral work formed quite a considerable part of all those gathered, although many of them so used are gathered with long stems, I have found after charging the 10,000 flowers with every item of expense that it is possible to think of, that they have netted me five cents each or \$50 per 1000, or close on to half the actual cost of my new iron house. And what is more, I am thoroughly satisfied that my bank account fully sustains this calculation.

The question now is, will Hinze's White or any other of the older sorts do as well or anything like it? I know that last year and other years when I was grow-

ing and depending in a great measure upon Hinze's White, I had lots of them when the crop was on, but between the crops I had to buy a good many thousand flowers at a cost most of the time of \$3 and \$4 per hundred.

Another pleasant feature to contemplate in Lamborn is the fact that the 10,000 flowers gathered from my plants are not missed, in fact no person to look at the beds would suppose for one moment that any considerable number of flowers had ever been gathered from them; the mass of buds in the several stages of development remain just about the same, or if anything still more numerous than a month or two ago. Another important and exceedingly valuable feature of this variety is its adaptability to culture on side benches near the glass; the greatest height of the grassy part of the plant is about eight inches, while the extreme height of flower stem is fifteen inches, and the stems are thrown up singly and in most cases with only one bud, no sticks or tying up being necessary.

I think after the above explanation that Brother florists will agree with me that I have every reason to be well pleased, yea, more than pleased with the results of just saying good bye to Hinze's White and substituting Lamborn in its place. At the present time there is not a single plant of Hinze's White on my place and hereafter I have no room for that carnation.

Recently I have been favored with pleasant calls from several Brother florists, most of whom have made the Lizzie McGowan the main object of their visit, but all have expressed themselves as greatly pleased with Lamborn, and in most cases are losing no time in providing themselves with stock. My last visitors, just before Christmas, were Messrs John N. May, of Summit and Robert Craig, of Philadelphia. Neither of these gentlemen are over and above demonstrative, but they are exceedingly practical, and Mr. May can detect the good qualities of a carnation as readily as he can those of a rose which his keen, well trained eye may rest upon, but Mr. May does not pretend to be a carnation grower, roses are his forte with a great big F. Somehow or other I got the impression that Mr. Craig was highly pleased with Lamborn, but then again I may be mistaken, because as I said before, he is not over demonstrative, but when I passed up out of my flower cellar a pot containing two or three hundred large pure white flowers of this variety, I thought I did detect a satisfactory twinkle in his eye but could not be certain as he only ordered five thousand plants, and then again these gentlemen came to see Lizzie McGowan. H. E. CHITTY.
Paterson, N. J., Dec. 26, 1890.

Sabal Palmetto.

Our illustration is from a photograph of a specimen growing in the open ground at the Bloomingdale Nursery, New Orleans. It was raised from seed by Mr. J. Fonta, the proprietor of this nursery. It is 19 years old, and now 30 feet in height.

Tuberoses at Christmas.

To have tuberoses at Christmas, get the bulbs in October, and keep them in a dry, warm place buried in tobacco stems until the following August. Then plant as usual and they will be in full bloom at Christmas. T. M. C.

Gypsophila in Floral Arrangements.

The accompanying illustration is engraved from a photograph sent us by Mr. Richard Bagg, Bridgeton, N. J. He calls attention to the effect the *Gypsophila paniculata* adds to the arrangement, and says: "Several customers have taken quite a fancy to its sprays of tiny flowers, and one had the accompanying photograph taken. I do not think the *Gypsophila* would force well, for its root is large and goes down in the earth like a Chinese yam, but it is useful to have planted outside. It is perfectly hardy. Seed sown now under glass will produce young plants that will set out next spring will bloom next summer. But the plants will not attain full size until the following season."

Canna Star of 1891.

This is a dwarf gladiolus-flowered canna and the finest of its race that I have ever seen or know anything about. It was raised by M. R. Catlin, of Richmond, Va., and sold by him to Hallock & Son, of Queens, L. I., who in turn sold it to J. L. Childs, of Floral Park, who now holds the stock of it.

About the end of October '89 Mr. Catlin sent me cut flowers of this canna, he then proposed calling it "Virginia Dare," and under this name I described it in the *FLORIST*, page 161, November 15, '89. He also presented me and Mr. W. R. Smith of the U. S. Botanic Garden at Washington, each with a small plant. I potted mine and kept it in a warm greenhouse and by Christmas it was in bloom, and it has never since been out of bloom.

The plants are dwarf and stocky and very vigorous, about two feet high indoors and 3 feet high out of doors; every shoot bears a spike which in time produces three to five laterals, each of which carries from thirteen to twenty-seven blossoms; the well matured open flowers are about four inches across with petals an inch wide, and the color is vivid orange scarlet with a slight border of golden yellow and yellow in the throat. And in the greenhouse in winter the color is brighter and better than it is out of doors in summer, and the individual flowers last longer.

As soon as I found out its great excellence I advised Mr. Catlin to hold on to it, keep quiet about it and multiply it with all his energy till he had 25,000 or 50,000 plants, then give it to the people. And to assist him in this was the sole reason for my absolutely refusing to tell the several florists and horticultural gentlemen who saw and admired it in bloom here last winter, one word about it or its origin. But its fame spread and so deep an impression did it make that last February J. L. Childs offered me \$1,000 for my one plant, but as it was not mine to give he couldn't have it.

Last April the Hallocks bought the stock, 300 plants of Catlin, and during the summer grew them out of doors on their bulb farm at Queens, and where they were seen by representatives of most all the leading florist and seed firms in the country and it is generally known in the trade as "the Hallock" canna.

In May I divided my plants into three parts and planted them out, and in September I lifted and redivided them making thirty plants, and these are now in pots in the greenhouse and blooming beautifully.

For a time I was afraid there might be some mistake about the identity of this fine canna, especially as the description

GYPSOPHILA IN FLORAL ARRANGEMENTS

of Madame Crozy fitted it pretty exactly, but on comparing it with excellent large specimens of Madame Crozy in bloom, kindly furnished me by Peter Henderson & Co., and Henry A. Dreer, I am satisfied they are quite distinct. Both, however, resemble each other in habit, growth, flower spikes and large-sized blossoms, but the color of the Star of '91 is more brilliant and velvety.

And I am inclined to believe that a year or two hence this canna will be grown in quantity by florists for cut flowers in winter; certainly, I will grow it. But let me here remind you that all of the flowers on a canna spike of any variety do not open at one time, and before those at the end of the raceme expand the first open ones begin to drop; also before the last lateral is in bloom, the first raceme of the spike is out of bloom.

W. F.

Chrysanthemum Beacon.

This is a full double, creamy white flower with strong stems. The outer row of petals are tubular and reflexed, while those nearer the center are incurved with convex tips. Winner of the first prize, silver medal, of the Mass. Hort. Society, Boston, 1890, for the best seedling.

Leaves of Advice From a Limb of the Law.

(For Young Florists.)

XXIII.

LIABILITY OF SHIPPER AND CARRIER.

To compare you to something in your own line, I should say that while your cheeks have the color of a red, red rose, your language is entirely lacking in the fragrance of moderation. Excited are you? Well calm yourself. Too much temper is like too much compost, it forces things but it burns them up in the end.

Don't be so much like a sensitive plant. Like to be a Scotch thistle would you? Well, now that I have heard your story, please cease that pendulum motion

of your body and I'll attempt to elucidate the point.

Whether the shipper or carrier of goods be liable for damage to them depends upon where the primary negligence lies. For instance, if a dealer in glassware ships me a box of cut glass goblets and when they reach me half of them are broken, either the shipper or carrier or both may be liable. If faulty packing could be proved, the shipper would be liable, for the carrier cannot remove the covers of cases to ascertain whether the goods are properly packed. All that the carrier can exact from the shipper is that he disclose the nature of the goods, by such plainly written or printed directions on the case as "Keep Dry", "This Side up with Care", "Glass with Care", "Keep Warm, Liable to Freeze", etc.

But no matter whether the negligence lies with shipper or carrier, under no circumstances may the buyer be held liable. The law exacts that goods must reach the consignee in good condition. There is one exception, however: The buyer must remove the goods from the freight house promptly, for after the lapse of a reasonable time the carrier's liability as carrier ceases and he becomes merely liable as a warehouseman. Quite a different thing, by the way.

Now let's get down to your case: A ships you one thousand tuberose bulbs via B's line of boats or railway. It was A's duty to mark them "Perishable, Keep from Cold" if the shipment was made in the winter, and if he fails to do so and the bulbs are frozen your redress is against the carrier, who in turn has a cause of action against the shipper. If, however, you neglect to remove the bulbs from the freight house upon their arrival and a cold snap sets in, then you become the negligent party and must stand the loss. But only in the last-mentioned case could you be held for the damage.

Now as you suggest, the negligence might plainly be with the shipper. For instance, if he were to ship you per express one box of cut flowers and fail to pack them properly you couldn't hold

CHRYSANTHEMUM BEACON

the express company. Your redress will be against the shipper.

But let me warn you that the law will not impose a hard condition on a carrier, by which I mean this: Suppose you ship a box of cut flowers and give notice on the box, "Keep in even temperature," but the weather changes and the flowers are ruined. You'd have no cause of action against the carrier, any more than you would if you sent a child by express and it caught the measles en route.

Thanks, I'm glad you spoke of that. A shipment of cut flowers arrives and your place is closed, they are taken back to the company's office and are ruined. You are the loser except you could prove that the express agent put the flowers carelessly in a warm place when he might have put them in a cool one.

Now, as you know, a carrier may limit his liability, but he must bring such limitation to the shipper's knowledge, otherwise it will not be of binding force upon him. No carrier may be held liable beyond the end of his route.

Now in your business your merchandise often being of a perishable nature you should exercise extraordinary care and diligence both in packing your goods and in plainly marking the case or box, so that the carrier may understand fully the nature of the contract he is entering into. There your liability ceases and unless some act of God or the public enemy destroys or damages the goods you may

not be held liable for their loss. The carrier must perform his contract with the limitations above referred to.

Now there is another side to this question. Suppose the carrier were not a common carrier but a mere private carrier, that is, suppose you send a thousand bulbs of some kind to a customer by a man specially hired to do the job. This would be quite another thing. You would be obliged to show negligence before you could hold him liable for loss by freezing or otherwise, and if he did it as a favor, without pay, then gross negligence would need to be shown, but no public or common carrier like a steamboat line, railway or express company may plead the negligence of their own employees. They are always liable except as above set forth. But one thing you must always do, give immediate notice of the damaged condition of the merchandise both to shipper and carrier.

UNCLE BLACKSTONE.

Society of American Florists.

Members of the society who paid for a photograph for group pictures taken at Mrs. F. B. Hayes' at Lexington and who have not received their pictures up to present date, are requested to forward their names to Wm. J. Stewart, 67 Bromfield street, Boston, as an effort is to be made to compel the party to fulfil his obligations.

Management of Exhibitions.

MR. EDITOR:—Noticing your request in a recent issue for a full discussion on the subject of the management of exhibitions I venture a few remarks for that purpose. Ofcourse I have reference to a flower show. The management of a flower show, and all those who do and who are invited to in any way contribute should bear in mind that the show of flowers is an educator of the public in that particular direction.

But like the professors in our colleges, we florists must be supported and must see to it that the good we are doing in the world is being paid for. Our store windows help to educate the public. We do not dress our windows daily with that benevolent object in view, we do it to show those who have cultivated the taste for flowers that there is the place to gratify their desires, but in doing so how many hundreds of others in a day have been impressed by our display of beauty. We have sown the seeds the harvest of which will, though perhaps indirectly, surely bring us full compensation for our labor, and those same flowers brought a fair profit. May the florists' window never be curtained.

The flower show is but a step in the evolution of our business higher up than our show window. During the last ten years or more our windows have educated such an army to their level that there is a

large class ready and anxious for promotion. That this is a fact the increased attendance from year to year at the different flower shows certainly proves.

Now a word upon the management of shows, and it is upon the management in arranging the preliminaries that the success of the venture largely depends. It is the business of the management to arrange matters as nearly as possible so that each contributor will receive a fair price for all he does, and also to give each of their possible exhibitors an opportunity of doing that which he can do best. It is very well to call the exhibition a chrysanthemum show and make them a leading feature while they are so popular, but the management must be true to their calling and not overlook a single opportunity of adding any flower or plant that is beautiful, whether they be expensive or low priced, and it would certainly be to our advantage to make better and more use of some of the cheaper flowers than we do. They should know the growers of their neighborhood and contrive to have their premium list so arranged as to bring out the strongest points of each so that each one will feel paid for his exertions. No one should be expected to work for nothing. That is the object in awarding first, second and third prizes for the same thing. The management must consider themselves for the time in the show business, and must pay for all services, although it is done by the prize system in place of contract. Of course this is easier to say than to do, but it appears to me to be the only way of getting all there is to be had. The next task is to arrange the whole so as to bring out the beauty of each feature without injuring any other. You may be sure that if you can get the best of what surrounds you and show it off to advantage the public will appreciate it and pay the expenses by an increased attendance, and the benefit will be mutual. But who will have charge of the management? It is generally a committee appointed by a club or society. They overwork themselves and their compensation is the kicks and grumbling of every one who has any criticism to make. As the exhibitor is tempted to exert an effort to win the first prize, why not allow the management 50% of the net profits. C. B. W.

Andromeda Speciosa.

This is a very pretty little shrub found wild along the borders of swamps and ponds in low pine barrens from North Carolina to Florida; but it is perfectly hardy in cultivation as far north as Boston. European botanists call it *Zenobia speciosa*.

It grows about 3 to 4 feet high and is of slender, arching, bushy form. The oblong leaves are plain green, or green above and silvery white below, or silvery white both above and below according to variety, and these varieties according to kind are styled by nurserymen *A. speciosa*, *A. s. var. pulverulenta*, or *A. s. var. pulverulentissima*. The flowers are pure silvery white, open bell formed, nearly half an inch across, and produced in fasciated racemes. It loves a somewhat moist soil, shelter, and partial shade (but not overhead from noonday sunshine). It comes into bloom with about the 28th of May and the flowers last through June.

This beautiful little *andromeda* is one of the best twelve hardy shrubs for florists' use mentioned by Mr. Jackson Dawson at the Boston convention (see Proceedings, page 98). And much of its

ANDROMEDA SPECIOSA. FLOWERS WHITE.

[REPRODUCED FROM GARDENERS' CHRONICLE]

popularity about Boston is due to the bunches of its beautiful flowers annually exhibited by Mr. Dawson at the exhibitions of the Mass. Hort. Society.

W. F.

Exochorda Grandiflora.

This is a very beautiful garden shrub from Central China, and used to be known as *Spiraea grandiflora*. The habit of the plant is one-stemmed, with a broad, bushy, symmetrical round top about 6

to 9 feet high, and firm, wiry wood. The flowers are large, white, in small racemes from the axils of the leaves on the one-year old wood; here they begin to open about the 8th of May, are at their best about the 12th, and pretty well over by the 18th. As cut flowers they are not very satisfactory, they drop off too quickly, but it is with this *exochorda* as it is with *Deutzia gracilis*, cut flowers from plants forced in the greenhouse in winter last longer than do those from outdoor plants in May.

EXOCHORDA GRANDIFLORA; FLOWERS WHITE. [REPRODUCED FROM GARDENERS' CHRONICLE.]

Because of the difficulty experienced by our nurserymen in propagating the exochorda in large quantity it has always been a rather scarce shrub in gardens. It is generally propagated from seed, but seeds are hard to get, and by layers and splice-grafting on pieces of its own roots. Some nurserymen, however, Hoopes, Brothers & Thomas, for instance, have large seed-bearing plants of their own. As this shrub grows exceedingly well in the southern states, I am inclined to think that it would be to the advantage of some of our southern friends to grow it for its seed.

The exfoliation of its bark is a peculiar characteristic of this shrub, but the idea that this is caused by enervation is erroneous; this is as natural to the exochorda as it is to the plane tree.

Exochorda Alberti is a new species from Central Asia and recently introduced to cultivation. Apparently it is quite hardy here, but our plants have not yet blossomed. The leaves are larger and broader than those of *E. grandiflora*. The blossoms are also white. It is highly recommended both by French and German nurserymen.

W. F.

The Poinsettia.

In response to the query in last issue of the FLORIST I give my method of treatment, which is as follows:

Stock that has been resting through the winter, if healthy, is shifted up into convenient sizes of pots, not too large, shaking off all the soil. Use a soil composed of good rotten sod three parts, rotten cow manure one part, and sand one part. If the plants are placed in a good sunny position and syringed regularly they will soon break, producing plenty of shoots. Give them a night temperature of 60° and a day temperature of 75°. These shoots should be taken off close up to the old wood and struck in the propagating bed, keeping well shaded and maintaining a moist atmosphere. Or they may be struck under hand-lights. The temperature should be the same as in the rose propagating house, only warmer overhead. The best time to commence is in April and May, starting your plants during these months or even later. Take the cuttings about four inches long or longer. After striking root, if potted off in the

usual way and grown in a rose house temperature, they will soon be ready for planting in benches from 4-inch pots. Or they may be kept in pots, but never allow them to become pot-bound. If grown in a temperature of 60° at night and 75° during the day, they can be carried through without losing a leaf. The dropping of the leaves is usually caused by too low a temperature or allowing the plants to become pot-bound before the bracts are set.

If required late, say for Christmas, grow the plants out of doors during the summer, housing early, never allowing them to become pot-bound. Give the last shift in September. A little liquid manure will help them along after they have set the bracts. I have grown late July struck plants this way and flowered them in 5-inch pots, the bracts being of immense size and the plants dressed down to and over the pots with foliage.

JOS. REEVE.

Cleaning Brick Flues.

C. P. asks for some way to clean the old brick flues without taking down the

flue at intervals. In volume 3, a subscriber related how he had accomplished this by making use of pussy. He tied a cord to pussy's leg, placed her in an opening at one end, and shut her in, making the other end the only way of escape. As she didn't propose to stay in she made tracks for the opening and in this way the cord was passed through, then a bag of hay was tied to the cord and drawn through.

Greenhouse Improvements.

A recent visit to the establishment of Messrs LaRoche & Stahl at Collingdale Pa., disclosed the fact that very many improvements have been made since my last call, nearly a year ago. Four rose-houses, each 18x100 and two palm houses have been added, and they are built in a solid block, having merely glass partitions to divide them. This glass partition is no doubt a capital thing, as it gives the front bench nearly as much light as any in the house, and certainly more than in houses that are separated by a solid dark wall. An inspection of these houses will, I believe, convince any one that it is not necessary to leave a space of 10 to 12 feet between houses as is frequently done.

The houses are three-quarter span and are glazed with 16x24 inch double thick glass. One-inch gas pipe is used for the purlins which are supported by truss-rods of 1/2-inch iron 8 feet apart. The rafters used are a keystone pattern, 2x3 inch yellow pine. Steam is used for heating the whole establishment, and the piping is both overhead and under each bench, which system is giving splendid satisfaction here.

A fine, large three-story brick building has also been erected, the first floor being used as an office and the second floor for storage. On the third floor is a large tank with a capacity of 10,000 gallons. The water is lifted by a steam pump, which also supplies Mr. LaRoche with some residence and stables which are in close proximity to the greenhouses. Another new 30-horse-power boiler has been put in, to heat the new greenhouses, office, etc.

Great credit is due to Mr. D. T. Connor, the able foreman at this place, for the excellent condition of the roses in the new houses. One house contains Brides and Hermets, another La France, and a third Papa Goutiers, all in fine condition, and at the time I saw them with a full crop for the holidays. The greenhouses are close to Collingdale station and will repay a visit.

W. W. COLES.

New York.

This has been the poorest Christmas New York has seen for many years. The general uncertainty of the financial outlook made flower buyers cautious. Society people were very quiet, not one half the usual floral compliments were exchanged. An analysis of the trade shows that the middle classes were the principal flower buyers.

Flowers were never so cheap at Christmas before, prices in many instances only reaching half those of last year.

It is more than probable that a much larger business would have been done by all if the public knew flowers could have been bought at reasonable prices, but unfortunately the florist is looked upon as a robber at Christmas and New Years, and people pass the flower windows with a sigh and visit the neighboring candy or jewelry store. It is only natural for growers and retailers to try and get as much as they possibly can for

stuff, but the question to be settled is, do high prices at Christmas tend to benefit our trade?

There were many reputable retailers here who bought very little at Christmas. Why? It was the same answer from all. Their customers would not pay the high prices.

There was a good plant business; flat pink baskets filled with small pink ericas brought good prices, silvered fern baskets filled with growing lily of the valley and white violets was a favorite design. Pandanus Veitchii in white and gilt pot baskets trimmed with silvered ribbons also sold well.

Araucaria excelsa was a favorite Christmas tree for the dinner table. Small orange trees with half a dozen fruit sold well at \$5 each.

Holly was very beautiful and sold well, there being but little left unsold. It was a good year for green stuff as the principal restaurants were all gaily decorated, an item that considerably helped the "green" market. English mistletoe seemed to be "too English" for the American people this year. Besides its English traditions do not appeal to the American heart such a degree as to warrant us in paying \$30 per crate (100 lbs.) for it.

Small roses were very plentiful as were also carnations and violets. Some of the violets seen around looked as if they had been well picked.

Red roses were the favorites and Meteoors and Woottons and Papas had it all to themselves. Beauties were in great demand, and this was the only rose that brought its usual Christmas price, there being no other large rose, with the exception of a few Alexis, in the market.

Lilium Harrisii sold well and were much used in church and other decorations.

Orchids seem to be losing the popularity they enjoyed the last three or four years. There were very few of them used this Christmas.

Gardenias and violets and American Beauties were mostly worn in the street.

Many pretty designs were seen in the windows along Fifth avenue and the principal club houses of the city. Wreaths of mistletoe tied with silvery white ribbon were hung in the windows of the Astor mansion, while the Vanderbilts decorated theirs with handsome wreaths of English holly with a broad wreath of berries in the center of the leaves and hung with cardinal ribbon tied in a Parisian bow.

Crescent wreaths of "Princess pine" with a little basket filled with berries and tied with red ribbon at one side was a novelty sent up by Stump.

Baskets filled with holly and poinsettias and scarlet carnations were much used for table decorations.

Baskets of mistletoe and Cypripedium insigne with frills of sea-green silk de chine made a very pretty combination.

Thorley had his window beautifully arranged with orchids and American Beauties. One of the windows was filled with violets with a background of lily of the valley. He says he has done a larger Christmas business this year than ever, having had to hire another store for his green stuff.

Scallen is noted for his tasty window displays, and whatever he exhibits shows well in his well arranged window. On Christmas day he had his window filled with violets, lily of the valley and Beauties and he did a good business. It was said that Thorley and Scallen were the only Broadway florists whose Christmas trade reached the standard of former years.

The Fifth avenue florists are all complaining, as are also the Madison avenue ones, with the exception of Stump, whose windows were a feast for the eyes. Stump is an enthusiastic lover of window decorations and spares neither labor nor expense in making his windows attractive. He says it pays, for people will naturally go where they see and get fine goods. His Christmas trade has greatly exceeded that of former years.

Johnny Weir is happy. This "Jay Gould of the Flower Market" was in high glee over the condition of the market on Christmas day. He says he bought fine Hermets and Brides etc. for \$50 and \$60 per thousand, one fourth of last year's prices.

Thursday was a beautiful day and many flowers were worn on the street, but we were visited on Friday by a terrific snow storm. Had this storm come on Thursday it is believed that there would have been a panic in the flower trade.

New Year's trade was anything but satisfactory, and tended only to further convince us that its importance in a floral sense is fast declining; to add to its drawbacks this year there was a cold drizzling sleet coming down all day; this in addition to the awful condition of the streets, owing to the heavy snowfall on Friday, made street travel impossible. No flowers were worn on the street, and many a dinner table lacked its usual "Smiles of nature."

There were no decorated ball rooms this New Year, no novel "dance bouquets" and very few "affairs" where flowers were a consideration.

The New York Florist Club intends giving an exhibition of plants, flowers and designs the week preceding Easter. The fact that such men as Amus, May, Thorpe, Taylor, Anderson and Manda, are interested guarantees the magnitude and success of the undertaking.

The Club's annual dinner will be given at Morrello's next Saturday.

The Alpine Florists, 34th St. and Broadway, exhibited a novelty in their windows on New Year's day. It was a basket filled with American Beauty roses frozen in the center of an immense cake of ice. It attracted a great crowd, and I heard the cynic remark, "It was a case of frozen beauties admiring frozen Beauties."

We read in this week's newspapers of the exploits of the notorious Neal in Chicago. "I told you so" is the only observation one hears amongst the florists here.

Wm. Ellis has leased and reopened the Fitzpatrick flower store, 30th Street and Broadway. JOHN YOUNG.

Chicago.

Mr. Bassett wants it understood that the \$100 he lost on the recent Neal was on an old account contracted when there was supposed to be a very considerable financial backing by responsible parties, and not on the latest deals of the "King fakir."

One large florist claims that there was more picking about high prices at Christmas than ever before, in spite of the fact that prices were really lower than they have been at the holidays for a long time. Customers assumed that the prices were high simply because Christmas prices were traditionally exorbitant.

Many amusing stories are told about various growers who "pickled" stock, refusing high prices just prior to Christmas, and then almost giving it away afterward. As one florist puts it, "There were enough violets in the market Christ-

EFFECTIVE GROUPING OF HARDY PLANTS [REPRODUCED FROM LONDON GARDEN]

mas day to pave State street and then leave enough for New Year's."

The horticultural department of the World's Columbian Exposition has not yet been organized, and as Director-General Davis has gone east to remain some time, it may be towards February before the appointment of Chief of the department is made.

The first regular meeting of the Horticultural Society of Chicago will be held at the Palmer House next Saturday afternoon at 3 o'clock.

Mr. O. P. Bassett will spend the remainder of the winter in the south for the benefit of his health.

It is reported that the store at 149 State street will be taken by one of the principal creditors of Neal and that he will continue the retail business there.

Effective Grouping of Hardy Plants.

This beautiful picture of an English garden well illustrates how bold hardy plants can be effectively used in parks and large gardens. The large-leaved plant in front is *Gunnera scabra*, the other beyond it is the Turkish rhubarb, *Rheum officinale*, behind which is the strap-leaved New Zealand flax, *Phormium tenax*, and the grass-like plant behind the *Gunnera* is the hardy bamboo, *Bambusa metake*. The background is made up of trees and shrubs, prominent among which is the variegated box elder (*Negundo aceroides* fol. var.).

Now such finishing off touches as this represents is common here in all large parks and well regulated gardens, but the outer plants we generally use are yucca and hollyhock.

While these European pictures are very suggestive we can not follow them in de-

tail. Sometimes, as in the case of the *Gunnera*, the plants are not hardy here, or, as we have it in the variegated box elder, the trees get scalded and unsightly after midsummer. And many plants are of too brief duration to be eligible, for instance, the Turkey rhubarb has very handsome leaves till after it blooms, then decrepitude becomes evident in the foliage.

We have got to find our own plants. *Bambusa metake* and the variegated *B. Fortunei* are hardy and do well with us; *Yucca angustifolia*, also *Y. filamentosa* in variety are hardy and appropriate; the *acanthuses* although barely hardy live all right if an armful of dry oak leaves is laid over each crown and an old soap box tipped over the leaves in winter; *tritomas* can be saved in the same way; Siebold's plantain lily, in the shade and Thunberg's day lily in the sunshine are also appropriate, and the cut leaved prairie docks (*Silphium*) so despised on the western prairies, fit in here nicely; so do tree peonies, *Crimean* statice, baptisias, and the like. Whatever we use should last in good foliage and character all summer long. *Spirea Aruncus* and *Bocconia cordata* are also occasionally used, so too are the giant knotweeds, *Polygonum cuspidatum* and *P. Sachalinense* and Oriental poppies; but I would disavow the use of the *polygonums* as they spread too much, and the poppy because it dies down too soon. Among grasses *arundo*, *eulalia* and large briza hold the front place for this work.

We have a few shrubs that can be used to capital advantage for foliage effect in the same way, chief among them are the *Mandschoorian* *dimorphanthus*, our southern *Hercules* club, and the fern-leaved form of the sumach, *Rhus glabra*. To obtain a fine foliaged or tropical ef-

fect, *Paulownia imperialis*, *sumachs* of several kinds, *alanthus*, *catalpa* and the like are planted thickly in groups and annually headed down to or near to the ground; the young sappy growths that spring up year after year bear unusually large foliage. But I am not in sympathy with mutilating a large tree to obtain the same end that can be secured with low growing plants quite as good and which need no mutilation.

Tender plants are often used in summer for this kind of gardening, and a very gratifying addition they make. The most appropriate ones are musas, cycads, palms, tree ferns, *eucalypti*, *melianthus*, *cannas*, and the like. And in large parks many plants are annually raised from seed that would fit well for such a situation; they are the large *solanums*, *cycas*, *oil*, *wigandia*, *ferdinanda*, *tobacco*, etc.

W. F.

NEW YORK.—A New York *Herald* reporter fell foul of a Scotch gardener on Long Island the other day and had to cry for quarter. In the *Herald*, December 11, he wrote: "J— D—, a Scotchman, who knew more twenty syllabled names than any man I ever saw before * * * fired off such a volley of Latin names at us that my head swam for an hour. * * * But I cried for quarter and J— D— was merciful."

New Books.

THE TREES OF Northeastern America, by Charles S. Newhall has been published by G. P. Putnam's Sons, London and New York. It is an octavo volume, devoted to the description and illustration of the trees of Canada and of the North-Eastern states of the Union, east of the Mississippi.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Monday to secure insertion in the issue for the following Thursday.

Address THE AMERICAN FLORIST CO., Chicago.

SHIPPING C. O. D.

Queries recently received indicate that the folly of shipping perishable goods C. O. D. without any portion of the value of the goods having been received with the order, from unknown parties, is not understood by all shippers. That this method of doing business will sooner or later result in loss to the shipper has been demonstrated time and again, and all wise shippers make it a rule not to ship perishable goods C. O. D. unless cash to the amount of at least one-fourth the value of the goods accompanies the order.

A trick that has been successfully worked by shady characters is to order flowers and plants to be shipped C. O. D. then refuse the package when delivered and later buy it in through an agent at a much reduced price. For the shipper when notified of the state of affairs will almost always advise the express agent to dispose of the stuff to the best advantage possible, it being better to stand a partial loss than a complete one, as the flowers or plants would probably be worthless when returned and he would have to pay express charges both ways. And again the express agents have instructions from their company to at once dispose of any such perishable freight when refused by the consignee.

Thus it will be seen that shippers who send goods C. O. D. to parties regarding whose responsibility they know nothing, unless a portion of the price accompanies the order as a guarantee of good faith, invite a loss, and encourage the class of swindlers referred to.

The best way is to have no dealings with an unknown buyer except on a cash basis, until he has supplied satisfactory references, and you have written to each of the references, and had a favorable reply. If you neglect these common business precautions you are pretty sure before long to contribute to the support of a certain class of dand-bents who are on the look-out for just such careless business men.

CREDITS.

In business it is necessary to give credit. Business could not very well be conducted entirely on a cash basis. But the credit system opens a splendid field for the swindler, and credit should be given to would-be customers about whom the seller knows nothing, only after satisfactory references have been given and these references fully verified. And a single reference is always safe.

We will relate the experience told us by the head of a well-known firm in the trade. His concern received a mail order from an unknown buyer. The cash came with the order and it was shipped. Later other and

larger orders came in, each accompanied by cash, and were shipped. Then came an order which the cash did not fully cover, but in view of the buyer's previous good dealing it was sent and the balance billed. Remittance came promptly back, and before a great while, without any investigation of the party he became in a small way a credit customer. Then came from other men in the trade queries as to this party's responsibility. Replies were sent that while knowing nothing especially about the man he had been a liberal buyer and always paid his bills promptly. Soon after this the gentleman was deluged with reproachful letters from those who had inquired about the man, stating that he had beat each one of them out of considerable amounts. The rascal had managed to secure shipments of goods at the same time from each of these parties, had disposed of them as soon as received and left town. It was evident that his entire dealings with the first mentioned party had been to secure a good reference from them with which he might swindle a dozen others.

FLORICULTURE IN THE SOUTH.

A southern florist writes asking for more information regarding the work of the commercial florist, adapted to the climate of the south, and mentions the following matters regarding which he would like the benefit of other's experience.

"Should we build wider houses than recommended for the north, with steeper pitch? Do we not need larger ventilators than at the north? Ought our roofs to be immovable or would it be better to substitute a roof that can be entirely removed? How can the condition of quite warm days and very cool nights be best provided for in heating? Should it be hot water or steam, if the former should we use small or large pipes, overhead or underneath? Is it better to raise our own carnation plants or buy them from the north? How about violets in the summer? What would be the best way to prepare roses for winter blooming here in the south? How would it do to plant in the open ground and cover with specially prepared sectional house?"

Our correspondent adds that he has many more questions that he would like to propound, and calls upon the florists of the south generally to take advantage of the columns of the FLORIST for an interchange of opinions and experiences as the methods of those in the trade in the north are rarely adapted to southern conditions.

We trust that our southern readers will act upon the suggestion and that a start will be made by giving their views upon the matters presented by our correspondent. It is the aim of the FLORIST to supply as nearly as possible the needs of the trade in every section of the North American continent.

THE AVERAGE returns from the Christmas trade, taking the whole country into consideration, probably equalled those of last year, but there was an apparent falling off in some of the large producing centers. This was probably due in a measure to the fact that cities and towns which have formerly been obliged to depend upon these producing centers for at least a portion of their supply, were, owing to the unusually favorably weather, enabled to fill their orders more nearly complete from their own cut and were not

obliged to buy so heavily. The recent disturbances in financial circles also unquestionably had their effect in lessening demand as the uncertainty of the situation induced conservatism among those buyers who are generally most lavish in their expenditures.

A FLORIST of Nashville, Tenn., writes complaining that growers and commission men have been selling cut flowers to retail buyers in his city at wholesale rates. While this is certainly to be deprecated we do not see that anything can be done except to retaliate by withholding his own trade from the growers and dealers complained of, and possibly securing the concerted action of the other florists in the city in the same direction.

THE BOUVARDIA flowers of which we made note in last issue as having been received from Mr. J. Linfort, College Hill, O. were of the variety "Grandeur." Mr. L. has since sent us a letter regarding same. He writes: "I have grown it this season for our Cincinnati market and find it much admired. It is a good grower, blooms freely, and the flowers have met with ready sale."

WE HAVE received from Mr. P. H. Meehan, Washington, a specimen bloom of a rose which he states is a seedling from Safrano. The flower is deeper in color than Safrano, much larger and more double. He states that the plant is a strong grower and free bloomer like its parent.

WE CAN supply the FLORIST and the American Garden together for 1891 for \$2.50.

J. B. T.—The subjects of your queries have been fully covered in recent issues.

Catalogues Received.

Joseph Renard, Unionville, Pa., carnation plants; E. H. Hunt, Chicago, cut flowers; A. Cauchois, Orleans, France, roses; Heatherside Nurseries, Frimley, Surrey, England, plants and nursery stock; Pike County Nurseries, Louisiana, Mo., nursery stock; C. Platz & Son, Erfurt, Germany, seeds; Johnson & Stokes, Philadelphia, seeds, bulbs etc.; Academy Nursery, Franklin, Neb., Rocky Mountain trees; Osage Nursery, Osage, Iowa, nursery stock; H. E. Chitty, Paterson, N. J., rooted carnation cuttings; W. B. Woodruff, Westfield, N. J., verbenas; Wm. Swayne, Kennett Square, Pa., carnations; Oscar H. Will, Bismarck, N. D., seeds; Wm. Paul & Sons, Waltham Cross, Herts, England, roses; Albert M. Herr, Lancaster, Pa., carnation novelties; Ludwig & Richter, Allegheny, Pa., seeds; John Palmer & Son, Dumfriesshire, Scotland, nursery stock.

PHILADELPHIA, JAN. 3.—The result of the bowling match to night was as follows: George Anderson, first prize, with a score of 181; A. B. Cartledge, second prize (a turkey) with a score of 147; John G. Lamb, third prize (a turkey), with a score of 118. The booby prize (a rooster) went to William Quibell who had a score of 67.

LOS ANGELES, CAL.—Christmas trade was about six times larger than last year. Carnations, violets, roses, Roman hyacinths, etc., were plentiful and in good demand. The Southern California Floral Society announces its Rose Show to commence April 14. An effort will be made to make the exhibition educational as well as artistic.

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president; JOHN FORTLER, Jr., Boston, secretary and treasurer. The annual meeting at Cincinnati, June, 1891.

Points on Advertising.

We have been interested in reading Mr. Burpee's "Facts and Figures" about advertising, and beg to submit our experience as to the cost of catalogue applications and general results. We do not keep a record of the returns from each paper as Mr. B. does, trusting to general observation for a guide as to what papers do or do not pay. We think we use pretty nearly the same class of mediums Mr. Burpee does, with the exception of papers known as "Co-operatives" which we use to considerable extent while he does not. Our results last spring were as follows: We paid out for advertising, \$13,307.71 to which can be added commissions, electrotypes, postage and other expenses \$1,599.66, making a total cost of \$14,907.37. From this expenditure we received a little over 62,000 applications for catalogues, 42,053 of which were paid for at ten cents each, which reduced our net advertising cost to \$10,702.07. This makes the net cost of each applicant about 17 cents.

This good result may seem surprising to some who know that we spent a fair share of the above amount in Kellogg's Lists of fifteen hundred co-operative newspapers. The fact is these little country papers pay much better in direct returns than they usually get credit for, yet in indirect returns we consider them much more valuable. In the first place, the competition from rival houses is very little; as few seedsmen or florists advertise in them; and in the second place, the amount of territory which they cover at small cost is very great. Here are fifteen hundred papers circulated through parts of the west where we have many thousand customers residing, who have our annual catalogue. I contend that the "moral effect" on these people at seeing our advertisement in their own little town paper is very great, and that it does much towards deciding them to sit down and send us an order from the catalogue already in hand. At least, we have always found it so. When our ads. in Kellogg's Lists appear a great increase in our general orders from the section of country covered by these papers is at once apparent. We have never been able to get satisfactory results from the so-called agricultural papers. There are, of course, exceptions, but as a class we have not been pleased with them. This seems strange, as one would naturally suppose them to be excellent, circulating as they do among the class of people the seedsmen desires to reach. We can account for it only that these papers, as a rule, have very small circulations and charge the advertiser exceedingly high rates. The large weeklies and family papers are generally good. Magazines are fair, and would be the very best mediums were it not for the fact that the ads. are all paged together by themselves and are seen only when one looks for them; this the average reader seldom does. The practice of running a series of comic pictures through the advertising pages, which some magazines have recently adopted, is to be commended, and will do much towards increasing the value of such publications as advertising mediums.

The returns from religious papers come rather slow, but are from a splendid class of people, who, when once secured, make good customers.

Mr. Burpee's idea of offering a prize for the best advertisement may be a good one, but we would like to know in what way they can be fairly judged without a practical test. Our experience has been that no man can tell how an advertisement is going to take until it is tried. Such as might be considered the best is quite liable to prove the poorest. Experience has shown that only the public at large can decide what advertisements are good and what are not. Some of the largest and best, (in our estimation,) which we ever put out have paid the poorest, while others that we did not consider strong have proved to be so.

JOHN LEWIS CHILDS.

Floral Park, N. Y. Dec. 31, 1890.

[We rather prefer the exact records supplied by Mr. Burpee to Mr. Childs "general observation," but Mr. C. makes a point in the "moral effect" of the small country papers. Good judges, however, report very light direct results from that class of papers.—Ed.]

A GOOD STORY is told of a certain Philadelphia house who are said to keep five or six different names over each potato bin, for instance, a rosy early potato would fill the bill for Early Rose, Clark's No. 1, Chicago Market, Early Maine, etc. A large late white variety would answer for Burbanks, White Star, Empire State, etc. We hope this had no foundation except the jealousy of a competitor.

SAN FRANCISCO, Dec. 21. Among other enterprises incorporated yesterday was the Cox Seed and Plant Company, with \$100,000 capital and subscribed stock. Directors—Aaron, Thomas A., William A., R. L. and S. W. Cox.

Philadelphia.

Christmas has come and gone and as far as we can hear the trade generally are satisfied. Growers report a good cut and most of the stores a better business.

What a blessing Christmas is. The people that gather and sell holly, mistletoe, laurel trees and other Christmas greens look forward and lay their plans for months ahead, and many a dollar is made by those who have no capital save willing hands. Such a chance too, it gives the grower to improve his prices and how he does take advantage of it. Prices jumped from \$10 for Mermets, La France and Brides on the 18th, to \$25 for the same kinds on the 23d, and stock was not all first class even at that. Everything goes at Christmas, but it is rather galling to the dealer to see would-be customers go out of the door on the announcement of prices.

John Burton had some fine Laings and Luizes in these brought 75 cents. Geo. Anderson also had quite a few hybrids, among them some choice Brunners.

There was plenty of stuff of all kinds and no word of "We can't take any more orders as we haven't got flowers enough to get out what orders we have," as used to be the case in former years. Philadelphia now has plenty of flowers for her own market and an abundance for shipping.

Mr. Heacock, of Jenkintown, has put in a telephone, the first grower to connect his place with the city. The telephone is scarcely used by the trade here, only two firms have them and they say they don't pay. We think the latter move is in the right direction and hope that more growers may see fit to follow suit.

Jacob Becker lost considerable glass by a recent storm. The wind lifted the roof off a shed on to the greenhouses beyond with disastrous results. Mr. Alburger, of Gray's Lane, suffered in a like manner, but the loss was not so great.

Robert Craig has some fine roses at present; a bunch of Hostes is looking very well and produces some fine flowers. There are a great many opinions expressed about this rose. Some men say they have thrown out what they had, while others are very well satisfied. Store men say it sells well when it comes good and is a great keeper, but will not bear much handling.

The bowling alley at the club is affording much amusement and is well patronized. Scores too are getting better—209 and 211 are the best so far. L.

Echoes from Philadelphia.

The volume of trade was greater at Christmas than usual. Many florists claiming an increase, while none will admit but what they held their own over former years.

The great bug bear—prices—was again the bone of contention between the retailer and commission man and grower. The former went so far as to dub the two latter "robber-barons," whereas the retaliation run somewhat in this shape: "The retailer hesitates not a moment to charge \$18 per dozen for what he has just paid \$6," and besides he continues, "what did the barons have to accept for their wares up until the gay and festive Christmas time?"

No matter how much the "kicking," the law of supply and demand will continue to regulate prices, until the much talked of syndicate buys up all the growing establishments, then, and not until then,

will the prices be systematically regulated.

It was the elder Rothschild who said the way he made his money was by "buying sheep and selling deer," and the florist-Rothschilds today are following in the old gentleman's footsteps.

Since Christmas day trade has been flat to put it quite mildly. New Year's day is getting worse and worse. It is a short season between now and Lent. It is to be hoped that it will be as lively as it is short.

Hon. John Burton is cutting some fine Brunners at this time; so also are Messrs George Anderson and Charles S. Price. This is the most satisfactory high priced rose to handle that we have; it is perfect in form, bright and cheerful in color and gives universal satisfaction to both retailer and flower lover, but alas! and alack-a-day!! the barons are indignant because it fails to flower freely, consequently they do not fully enter into its popularity. At Christmas it wholesaled at \$1.00 each, now it has dropped to 75c apiece. Either Laing, Luize or Magna Charta will pay the grower better at half the price.

By way of recreation the members of the Florists' Club and their friends will engage in a bowling contest for turkeys on Saturday evening. There will be three classes—those having made more than 150 forming one class, those having made less than 150 another class, and to help the unfortunate ones, those having made less than 125 will have a class all by themselves. The one making the lowest score will also be rewarded regardless of the class he rolls in, this will be known as the booby prize. M.

Vegetable Seeds for Market Gardeners.

Flower Seeds and Bulbs for Florists.

Our reputation among the critical Market Gardeners of this country, for having varieties and strains specially adapted to their wants, is second to none.

Our new Florists' and Market Gardeners' WHOLESALE PRICE LIST is the best and most complete list of its kind ever sent out. Write for it on your printed letter-head or enclose business card to show you are entitled to it. Our Horticultural and Poultry Supply Circulars are complete and can be had for the asking.

Boston.

The cut flower trade has had a bad cut down since the holidays, prices being lower than ever before at this season of the year. Roses especially have been affected, and unless there is a very decided and speedy advance in prices growers will suffer severely.

The annual supper of the Gardeners and Florists Club will take place on Thursday Feb. 5, at the Quincy House.

The opening meeting of the Massachusetts Horticultural Society for 1891, was well attended and President Spooner's address gave much satisfaction. He spoke of the achievements of the society during the year just passed, giving the committee in charge and the exhibitors at the August exhibition in Music Hall, much praise for their well directed efforts, and stated that the recent chrysanthemum show was the most successful pecuniarily that the society had ever held. The finances of the society are in a prosperous condition and the schedule of prizes for 1891 which has just been published, shows a liberal advance in value of premiums offered over previous years. W. J. S.

Minneapolis, Minn

Christmas trade in St. Paul and Minneapolis was as brisk as usual, every one doing a good business. Violets and valley were very scarce and high.

The stock of roses and carnations was unusually fine this year, the sunny weather for the past few weeks bringing everything in fine color. Home supply not equal to the demand. Bulls were plentiful but not exceeding the demand.

Chrysanthemums were gone. The florists did not object but some of their fast customers thought "it was just too bad!" not on account of the price you know but they "liked chrysanthemums so much better than roses."

The inquiry for specimen plants in bloom was much greater than ever before. A few well grown specimens of Harrisii, azalea and assorted ferns in pots, was about all that was offered. Jardinieres filled with assorted plants sold well in some places. One florist in particular having more call for these novel arrangements than he could supply.

In spite of the fact that our friends the commission men assured us that flowers would be scarce and high, it was found that unlimited orders were filled literally as they had never been filled before. In among the profits of our Christmas trade. No doubt we shall take the "limited" next time we visit our friends. S.

REGARDING the floral wreath of which we gave an illustration in issue before last, Mr. Whitnall writes that the arrangement was not his, but that the photo was one secured from Mr. D. B. Long of Buffalo.

Denver, Colo.

Christmas trade was brisk in loose cut flowers, long stemmed roses and carnations having the preference. Very little demand for made up work of any kind. Home grown flowers were very poor, and fully three fourths of the roses and other choice stock sold during the holidays had to be shipped from eastern cities. Even then the supply was not nearly equal to the demand. Fancy roses retailed at from \$3.00 to \$4.00 a dozen, and in some cases as high as \$5.00 a dozen. Carnations with long stems retailed at \$1.00 to \$1.50 a dozen, Roman hyacinths at \$1.00. Valley and violets were scarce.

The building boom during 1890 was quite extensive, fully 50,000 feet of new glass having been added during the year. J. L. Russell, successor to Gallup's old place, put up nearly one half of the amount. The others were H. Hously, a new florist, 6,000 feet, principally for roses; Chapman & Hanselman, 7,000 feet for roses and carnations; Hitchcock & Hubbard, another new firm, three rose houses containing 6,000 feet. This last named firm contemplates building the largest horticultural establishment in the west, and if money, perseverance and knowledge will do it they will certainly succeed.

Braun & Miller are continually adding to their Peterburgh establishment and their foreman, Mr. Foster, is now sending into the city the finest Nemets and Brides ever grown in quantity in this section. Charles Mauß, the Capitol Hill florist, is also growing splendid specimens of the two above named roses, also large well colored blooms of La France. This establishment also added three new houses last year. Witter & Co. have added two new rose houses, Newlander & Rollin two new plant houses, and these are to several new outside aspirants.

ROOTED CUTTINGS.

— Send for Lists. The prices and quality are sure to please. —

CARNATIONS—All the leading sorts. Eight 100 foot houses.**COLEUS**—An immense stock. Twenty-four varieties.**GERANIUMS**—A choice assortment in mixture, at \$10.00 per 1000.**CANNAS**—French and others, and numerous items of interest to florists. A new feature in Smilax culture.**CARNATION NOVELTIES.**

Lizzie McGowan, Louise Porsch, Golden Gate, J. R. Freeman, Wm. F. Dreer, Hector, Edelweiss, Angelus, Dorothy, Nellie Bly, Snow Bird, White Wings, May Flower, Orange Blossom, Beauty of Oxford, Emily Louise Taplin, and others are described in my list.

L. B. 338.**ALBERT M. HERR, LANCASTER, PA.****LIZZIE MCGOWAN,**

* * THE QUEEN OF WHITE CARNATIONS! * *

Will be ready for distribution February 10th, '91. Price, \$12 per 100; \$100 per 1000, for strong well rooted plants from cutting bench. Plants well established in small pots, \$3 per dozen.

Send for price and descriptive list of this and other sorts.

ADDRESS

H. E. CHITTY, PATERSON, N. J.**WINTER-FLOWERING CARNATIONS
FOUR GRAND NEW VARIETIES.**

You cannot afford to pass by without trying our seedlings of merit for 1891; there is more profit in growing fine, fancy flowers every year; and in **GOLDEN GATE** (yellow), **WM. F. DREER** (rose pink), **J. R. FREEMAN** (cardinal crimson), and **CONSTANCY** (scarlet), you have a good range of color in the most perfectly shaped flowers and productive of bloom.

Prices, **Golden Gate**, \$2.50 per dozen; \$20 per 100. **Dreer**, **Freeman** and **Constancy**, \$2.00 per dozen; \$15 per 100. On an order at one time for 100 plants of each variety or 400 plants in all, the price would be \$50; or half the amount, \$25. Sample florets of the four varieties will be mailed on receipt of 35 cts.

CHAS. T. STARR, Avondale, Chester Co., Pa.**LIZZIE MCGOWAN THE NEW WHITE.**

ROOTED CUTTINGS, \$12.00 per 100, or \$100 per 1000.

LOUISE PORSCH FINE YELLOW.

Better grower than Buttercup; \$7.00 per 100; \$50.00 per 1000.

Both ready for delivery February 10, 1891. 500 at 1000 rate, and 50 at 100 rate.

ADDRESS

CARNATIONS.

News Notes.

EAU CLAIRE, Wis.—Fire damaged the greenhouses of B. F. Millard, causing a loss of about \$800, early in the morning of December 24.

HACKETTSTOWN, N. J.—Wm. B. Heymann & Co. have let the contract for the building of two additional greenhouses, each to be 150x26½ feet.

SALISBURY, Mo.—Chas. Pomeroy has started in the florist business here since the publication of the directory, and should be added to the list.

VALLEY FALLS, R. I.—The father of Walter Sword, the florist, died at Pawtucket December 28. Mr. Sword has the sympathy of his friends in the trade.

NASHVILLE, TENN.—Cantrell Bros. succeeded M. Trischler & Son, the florists on Hydes Ferry Pike. The firm is composed of Robt. W. Jas. G. and Harvey W. Cantrell.

PITTSBURG.—A blaze in the greenhouse of John Bournatreg, on Homewood Ave., caused a loss of \$1,500, on the morning of December 18. The fire originated from an over-heated flue.

ATLANTA, GA.—It is reported that a stock company has been organized with Robert J. Lowry as president, to grow flowers and plants, the glass to be located at West View Cemetery.

LEXINGTON, KY.—Christmas trade here was extra good. Flowers of all kinds brought good prices. Mrs. D. Honaker has opened a city store at 41 North Broadway, in the Opera House building.

LITTLE ROCK, ARK.—Holiday trade a little better than last year. The supply was rather short on account of a large funeral on December 24. Prices were very low. Bride roses sold slow at \$1 a dozen. The demand was mostly for loose flowers.

SHOCTON, Wis.—Eben E. Rexford, the well known writer on floriculture for amateurs, was married recently. He had just completed a new house for the occupancy of himself and bride, but it caught fire and burned a few days before the date set for the wedding.

ALBANY, N. Y.—Among the new companies incorporated with the Secretary of State is the Long Island Nursery Company, of Manor, Suffolk county, to carry on a general farming and nursery business. Capital, \$20,000, and trustees: Joseph Simons, Henry de Perigny, Edward H. Potter, Arthur M. Davis and John Seymour Montgomery.

CLEVELAND.—J. M. Livingston & Sons, the Crawford road florists, suffered a loss of \$1,000 on buildings and \$2,000 on stock, by fire December 29. No insurance. The fire started about 2 a. m. in the greenhouse-shed. This building and about 20 feet of the ends of five greenhouses were burned. The cold destroyed what stock was not touched by the fire.

OAKLAND, CAL.—James Hutchison will retire from active business May 1. The business will be continued by H. M. Sanborn (who has been with Mr. Hutchison for 21 years) and the firm name will be Hutchison & Sanborn. Mr. Hutchison recently sold the lot upon which his down town depot stood for \$72,500, an advance of \$60,000 on the price paid by him in 1876.

LOUISVILLE, KY.—Christmas trade in holly was the largest we ever had. It

was 50% better than last year. The flower trade was good but would have been better if the weather had been good. The heavy snow prevented the people from coming out. Roses, hyacinths, and narcissus were the leading flowers here. Violets were very scarce. Take it all together we had a good trade.

WORCESTER, MASS.—The recent heavy fall of snow was not removed from the streets by the authorities as promptly as it should have been, and one of our Main street florists in front of whose store the snow had been piled to a height of five feet, as a joke on the city government, planted the drift with a few pinks, ivy, etc. and placed a "keep off the grass" sign on top. It excited much amusement.

BROOKLYN, N. Y.—The evening of December 20, a spark set fire to a quantity of pampas plumes in front of florist Mallon's store and in a moment had spread the whole length of the stand on which the plumes were displayed. The wooden awning frame caught and for a short time it looked as though the main building would not escape, but the burning plumes were scattered and the awning torn from the framework in time to save the building. Loss only about \$100.

SYRACUSE, N. Y.—All our florists feel very happy over their Xmas trade which has been far in advance of previous years—not a pound of holly or green was left over. Cut flowers sold well, the chief call being for roses, carnations and violets; hyacinths and tulips moved off slowly. There was a marked falling off of orders for made up pieces, loose flowers being preferred. Prices ruled well, but it is to be regretted that there is not a better understanding amongst the florists, so that the cutting of rates may stop, for it is not profitable or satisfactory.

H. BAYERSDORFER & CO.,
WHOLESALE
FLORISTS' SUPPLIES ONLY,
56 N. 3rd Street,
PHILADELPHIA, PA.

We can now furnish in any quantity desired Debit and Credit Tickets of which we give below samples reduced one-half in size.

DEBIT. <i>Jan 10 1889</i>			
<i>John Smith</i>			
100	<i>Verbena</i>	3	—
50	<i>Geranium</i>	4	—
		7	—

The debits are printed in black and the credits in red, so they can be readily distinguished. They are put up in blocks of 100; 50 of each, placed back to back; thus but one block will have to be carried. By means of these tickets an entry of a sale or receipt of goods can be made anywhere—in the house or in the field—and afterwards filed. Tickets for each transaction in your business will make data from which a book-keeper can readily work. With this simple and easy means of keeping a record of your business can you afford to neglect so important a matter?

Price of Tickets, postpaid, 100, 20c; 200, 35c; 300, 50c; 500, 75c; 1000, \$1.40.

THE February issue (1891) of THE AMERICAN GARDEN will be especially devoted to Orchids. It will be racy, artistic, instructive, correct. For the first time in this country the question "What is an Orchid?" will be answered. Among the notable features of the issue will be the following articles and discussions:

- A GENERAL VIEW OF THE ORCHID FAMILY.
THE BEST NEW ORCHIDS AT THE ROYAL GARDENS, KEW.
ORCHIDS AT HOME IN BRAZIL.
ORCHIDS FOR BEGINNERS.
- CYPRIPEDIUMS.
METHODS OF CROSSING ORCHIDS.
ORCHIDS IN CALIFORNIA.
CONSTRUCTION OF ORCHID HOUSES AND TREATMENT OF ORCHID PESTS.

The number will also contain an account of the Government Seed Bureau, by the ex-Chief of the Division. Every gardener, and especially every seedsman, should read this article. The number will be beautifully illustrated.

THE RURAL PUBLISHING CO., Times Building, NEW YORK.
Price, \$2.00 a year. In club with American Florist, \$2.50.

THE CHEAPEST AND BEST OF ALL.

FIR-TREE OIL

INSECTICIDE—soluble.

FOR PLANTS.—To make a solution for washing or cleansing purposes—1-1/2 a Pint of Fir-Tree Oil to ten gallons of water.

For Green and Black Fly, Thrip, American Blight, Woolly Aphis, etc.—Half-a-pint of the Fir-Tree Oil to two or four gallons of water, or two or three tablespoonsful to the pint.

For Red Spider and Caterpillar—Half-a-pint of the Fir-Tree Oil to two gallons of water, or three tablespoonsful to the pint.

For Mealy Bug, Brown or White Scale—Half-a-pint of the Fir-Tree Oil to four or six quarts of water, four to eight tablespoonsful to the pint.

For Mildew and Blight on Fruit or Foliage—Half-a-pint of the Fir-Tree Oil to a gallon of water, or six tablespoonsful to the pint.

For Ants, Grubs, Worms, Wood Lice, etc. in the Soil—Half-a-pint of the Fir-Tree Oil to ten gallons of water.

The most efficacious way to use Fir-Tree Oil in small quantities is to apply it with one of HUGHES' APPLICATORS.

When applied to the roots of delicate plants the soil should be drenched with clean water immediately afterwards, in all other cases washing is not necessary. Used with warm water it is quicker in its action than when cold is used.

Soft or rain water is necessary, and Applied in Wood, Tin or Pot Vessels. —Galvanized Iron Vessels must not be used.

FOR ANIMALS.—For Skin Diseases and Killing Vermin mix one part of Fir-Tree Oil with three parts of warm water and wet the affected part each day. In some cases it may be used stronger. For Ringworm apply full strength with a brush each day.

FOR WASHING DOGS.—Put a large coffee cup full of Fir-Tree Oil in a pail full of warm water and use a piece of common soap to make a lather.

For MANE apply with a brush full strength every day.

FOR BIRDS INFECTED WITH PARASITES.—Put a tablespoonful of Fir-Tree Oil in one quart of warm water and dip the bird in it, taking care that its eyes are protected, hold the bird in one hand for one minute, then dip into clean tepid water; this may be repeated. If necessary a much weaker solution may be used with a spray producer.

FOR CAGES.—The Fir-Tree Oil to be brushed into the crevices, or a solution of one part to three of water applied to inside with a brush.

FOR NITS IN CHILDREN'S HAIR.—Mix one part of Fir-Tree Oil with three parts of warm water and apply with a comb or brush, the hair can be washed shortly after.

FOR WASHING FLANNELS AND UNDERCLOTHING.—Put a wine glass full in ten gallons of water for steeping, the same may be put into the boiler. Common soap may be used but no other preparations.

Sold in bottles, half pints 15 cts; pints 25 cts; quarts 45 cts; half gallons 75 cts; gallons 1.25 cts.

Drums, 5 and 10 gallons each, at 1.75 per gallon.

Manufactured by E. GRIFFITHS HUGHES, Victoria St., MANCHESTER, ENGLAND.

NEW YORK—A. BOLKER & SONS.

TOBACCO STEMS FOR FLORISTS.

For Sale, packed in bales 250 to 250 lbs.

No Charge for delivering to depots.

PRICE:

\$10.00 per ton. \$1.50 per single bale.

S. F. F. ATTENTION.

NOTICE RELATIVE TO THE AWARD FOR STANDARD FLOWER POTS.

Many of our friends agreeing with us that the award on Standard Pots at our late Exhibition was an unjust one, we shall use the advertising columns of the AMERICAN FLORIST to state our side of the question.

We asked the Executive Committee to give us an impartial committee of award. The following propositions should convince anyone whether **WE FEEL** that we have had such a Committee.

The following is the text of the matter in question, taken from the official programme:

"Manufacturers of FLOWER POTS are notified that a Certificate of highest merit will be awarded to that display of Pots shown at this exhibition, which most nearly approaches the Standard. Such displays shall consist of not less than one dozen of each size, made from working molds and not turned down."

One member of the Committee of Award said that we were not entitled to any award because we exhibited but fifteen sizes, while others exhibited seventeen, and that seventeen cuts were represented on a white sheet of Standard Pots. We fail to see that the award was offered for any specific number of sizes, but that twelve of each size should be presented. **A MUCH MORE IMPORTANT PART OF THE COMMITTEE'S ANNOUNCEMENT** was that the pots should be **MADE FROM WORKING MOLDS AND NOT TURNED DOWN.** We do not hesitate to make this public statement that the Flower Pots to which was awarded the Certificate of highest merit were **VERY MANY** of them **EITHER GROUND, FILED, TURNED OR SAND-PAPERED** to size, and for that reason alone were not entitled even to a measurement by the Committee of Award.

WE WISH TO MAKE TWO PROPOSITIONS.

First. We will put up **\$1,000 in Cash** and submit the same pots exhibited at the late Exhibition against the pots exhibited by our competitor, and leave it to an impartial committee of three, and if our pots do not come the nearest to the requirements, we will present the \$1,000 to the fund of the Society of American Florists.

Second. We will put up **\$2,000 in Cash** and produce 500 pots of each size from 1 1/4-inch to 7-inch inclusive, and 250 pots each from 8-inch to 12-inch inclusive, making 7,500 pieces, made from the same molds in which the pots we exhibited were made, and all shall be of the proper thickness in all respects, against an equal number of pots made from the same molds that produced the pots receiving the award, and if an impartial committee do not give us the award we will present the money and the pots to the Society of American Florists for an experiment station. And if we are allowed to choose one of the committee of three, we will select our honorable Treasurer Mr. M. A. Hunt, of Terre Haute, Ind.

A. H. HEWS & CO., North Cambridge, Mass.

As we go to press the Executive Committee of the Society of American Florists is in session at Toronto, arranging the programme for the seventh annual meeting of the society which will be held in that city next August. We shall give a full report of the proceedings of the committee next week.

THE BEST HILL of the valley we have ever seen is contained in a bunch sent us last Wednesday by A. Jurgens, Havelock, Ill.

More About Color.

There have been a great number of books written on the subject of color, and several on the nomenclature of color, none of which however seem to give to our business what we desire. Most of the authors writing on color handle the subject from a scientific point of view, using the colors of the spectrum, which does not help us much in attempting to name the colors of flowers. Allow me to quote from Rood: "The sensation of sight is produced by the action of very minute waves on the nervous substances of the retina; that is to say by the aid of purely mechanical movements of a definite character. When these waves have a length of about 1-39000 of an inch, they produce the sensation which we call red, we see red light; if they are shortened to 1-41000 of an inch, their action on us changes, the call up to us a different sensation, we say the light is colored orange; and as the lengths of the waves are continually shortened the sensation passes into yellow, green, blue and violet. From this it is evident that color is something which has no existence outside and apart from ourselves. Outside of ourselves there are merely mechanical movements, and we can easily imagine beings so constructed that the waves of light would never produce in them the sensation of color, but of heat."

Church tells us that "Certain waves or vibrations which affect the fibres or rods of the optic nerve of the eye are translated by the brain into color. Such excitation of the optic nerve may be brought about by pressure on the eyeball, by an electric discharge, by internal causes and preeminently and generally, by light. Color is in fact an external sensation, and has no external or objective existence. And on page 69 he explains figure No. 14, telling us that when three colored discs of light, red, green and blue are thrown on a black surface, these discs all partially overlap each other, where the red and green discs coincide the resultant hue is yellow. The facts are of the greatest value from a scientific standpoint, but they do not help us much in attempting to describe the color of flowers or pigments. But few people know that red and green light combined produce yellow in comparison to the many that know that red and green pigments do not. If the colors of the spectrum could be exactly imitated by pigments whose colors were permanent, it would be a comparatively easy matter to establish a nomenclature, because we should always have the spectrum to fall back on as a standard. On this point Church says: "It must not be forgotten that *not one* of the pigments we have been compelled to employ, offer more than a rough approximation to the true hue, which it is assumed to represent. All transitional hues have been purposely excluded from this diagram, for they cannot

be fairly represented by any system of color printing."

Before looking into the subject as thoroughly as I have, I had hoped to create a Standard Nomenclature; long since I have banished the thought. But if by our united effort we can bring a little order out of the very complicated and often misleading methods now employed by a great many, we shall have made a long stride in the right direction.

H. H. BATTLES.

ED. AM. FLORIST.—I notice your remarks on color. In reading Chevreul, the master of color, it has often occurred to me that a chart of colors, such as would go on an octavo page or less, would be of great interest to lovers of plants and of great value to florists. A number being attached to each shade, the color of a flower could be described by a number. These charts could be furnished very cheaply for binding up with catalogues, if chromed by the 100,000.

Flushing, N. Y.

S. B. PARSONS.

[We are not at all favorably impressed with the proposition to number the colors. We think it would be a serious error to attempt it. Let the colors be named by all means and in accordance with the popular idea as ascertained by investigation and comparison. But the last suggestion is a most excellent one. If a number of those who issue catalogues would arrange to each take a sufficient quantity of the charts to bind one in each of their catalogues for the convenience of their customers, the cost of each chart would be reduced to the minimum on account of the great quantity that could be printed at one time. And further an immense benefit would accrue through the wide circulation that would be at once given the chart among the very people who would most thoroughly appreciate it. And it would certainly well repay those so circulating it, as an advertisement and in establishing closer relations with customers. What do the catalogue men say? Let us hear from them.—Ed.]

EDITOR AMERICAN FLORIST.—May I suggest that the simplest and cheapest method of distributing your chart of colors is by means of sewing silk. Let a quantity of each color, or shade, be dyed, and then from twenty to forty threads of each be gathered in a little tuft which may be fastened with glue or wire upon folding pasteboards. The tuft form will give not only the surface color that would be reflected from silk fabric, but also the depth of color among the threads. Mr. Battles' article can not fail to be of great value, but I fear he is on the wrong "tack" when he attempts to reduce the number of terms to describe colors. The more nearly indescribable a thing is the more words are necessary to convey an

idea of it. The simple words red, yellow, blue, convey no definite idea, but merely determine a class of colors. To make them definite they must be modified by adjectives as, brick-red, copper-red, blood-red, etc. Texture will also modify the appearance of color, as every artist in color understands, and so we must say waxy brick-red, satiny brick-red, velvety brick-red, etc. Now, when we come to express shades we must again add another class of adjectives—light satiny brick-red, deep satiny brick-red, dark satiny brick-red, etc. Still another class of adjectives are demanded to express brilliancy or dullness, brightness, dazle, glow, etc., which it seems to me are proper terms for a florist to use. They are more poetical, perhaps, than scientific, but the popular side of floriculture is poetical, and so long as words are weak to describe so long must we choose our terms from fire and sea, from sunrise and snowstorm—wherever we can get them best.

Mr. Battles surprised me by the statement that to his mind vermilion was a "dull scarlet," and that there were no blue sweet peas nor pansies. "Grand Blue" Sweet Pea is a pure indigo blue, no purple about it, and Emperor William Pansy is also blue.

RICHARD FERRIS.

[There are some very decided objections to the use of sewing silk as suggested. When attempting to compare the color with that of other objects the sheen of the silk is very confusing. Again the difficulty of dying a fabric to exactly match a given shade is very great. And the expense of such a chart would be very greatly exceeded that of a colored lithograph.—Ed.]

The Conservatories of Mr. W. Brown.

The greenhouses of W. Brown, Esq., Flatbush, L. I., on account of their wealth of rare palms, foliage plants, orchids, etc., are at all times worthy of a visit.

Under the fostering care of genial "Gus" Bennett every plant looks the "picture of health" and well being. "Gus" is a thorough gardener and "chip of the old block," he being the son of the late W. Bennett, who was well known to horticulture and scarcely excelled in his particular branch.

The palm house on entering reminds one of the fairy land we used to read about, with its towering palms and foliage plants, its rockwork covered with creepers, mosses, bromeliads and ferns, all producing a charming effect, and contrasted deeply with the gaudy anthuriums the well colored crotons, dracaenas and the grand display of cattleyas, lilies, calanthes, etc., which combined produce a very remarkable impression.

Besides the above a novel effect has been carried out on one side of the house which has been covered with every conceivable plant that would grow there. The effect produced is fine. Such acquisitions as Anthurium grande, crotons, Pandanus Veitchii, ferns and selaginellas are simply reveling.

An immense piece of *Latania borbonica*, very compact and beautifully furnished, "catches the eye" and appears to be a greater distance through than it is high, which is about 25 feet.

Phenichophorum secellarium, *Martenzia caryotifolia* and the kentias are well represented, as also are many rare varieties not to be matched anywhere. Among the most notable are *Acanthophoenix crinita*, with a spiny stem like the first named and with beautiful silvery

under foliage; *Ceroxylon nevum*, a noble plant with silver also, and *Livistona Hoogendörpii*, very distinct.

A grand feature in one corner of the house is the now famous specimen of *Goniophlebium subauriculatum*, a lovely hanging fern from the Himalayas, grown in an immense tub, it stands on a stool 5 feet high, on the bench, with fronds reaching the floor, they measuring in many instances over 12 feet. Other ferns worthy of mention are *Gleichenia princeps*, one of the grandest of tree ferns, with fronds measuring 15 feet; a masterpiece in the shape of *Davallia Mooreana*, and well grown pieces of *Adiantum trapeziforme* cultratum, *Adiantum Farleyense* and *Davallia fijiensis plumosus*.

Among the foliage plants *Dracena Kirkii*, 10 feet high; *D. Goldiana*, *Croton Mortii*, *Anthurium Andreanum* and *A. Ferrierense* figured well.

The "stove" house presented a pretty appearance, filled as it was with nice young stuff; from the roof hung well pitched plants of the following nepenthes: *N. cincta*, *Henryi*, *Ameisiana*, *Morganae*, etc. I also noted pretty specimens of *Spherozyne latifolia*, *Aloesia Sanderiana*, *Maranta Macoyana*, *Aralia Veitchii* and two representatives of the palms, *Licuala horrida* and *Cocos Weddelliana*. The stage was edged with *A. Farleyense* and *Panicum variegatum*.

A pleasure awaited us as we entered the orchid house, not on account of the galaxy of bloom, but the general health of the phalaenopsis with immense fleshy leaves, all showing flower; the "Cypis" were well to the front, as also were the cattleyas, whose flower sheaths were flat and foretold a great crop of bloom. One piece of *C. Schröderi* with eight sheaths, will throw on an average three flowers apiece, quite a plant!

The rose house in full crop, contains all the leading varieties, also the new Climbing Perle, of which "Gus" speaks in glowing terms; he is growing it on the "stays" of the house.

It is easy to see that Mr. Bennett belongs to the "old school" when you enter houses filled with cinerarias and herbaceous calceolarias, the finest I have seen and as "clean as wheat," the secret of success throughout the whole establishment.

The grounds though now in a dormant state are well cared for during the season, as are also the kitchen and flower garden, but of these I will speak in the near future.

THE DRUMMER BOY.

Exhibitions.

In the smaller cities where an exhibition can not be made a financial success when conducted upon the same lines as those in the large centers of population, a combination of flower show and church fair has been found to be an excellent substitute. While such exhibitions are hardly so educational as the others, they certainly accomplish good and are a very effective advertisement for the florist supplying the plants and flowers.

A recent successful venture of this kind was made by Mr. H. G. Higley, a florist at Cedar Rapids, Ia., and as a suggestion in this line we present herewith an illustration engraved from a group of photographs taken during this exhibition. It was held in a large tent erected on a centrally located vacant lot and the plants and flowers kept much better under this cover than in a closed hall. It might with reason be expected that in November the tent would have been uncon-

fortable without heat, but such was not the case in this instance, still such mild weather can not of course always be depended upon at that season.

The plan upon which this affair was conducted was as follows: Mr. Higley arranged to erect the tent and supply the plants and flowers, he to have the door receipts, the churches each to erect a decorated booth on the space assigned them and to have the benefit of all the sales they could make. This arrangement seems to have been very satisfactory. The attendance was very large and the affair was quite a financial success. In addition the florist received of course a great deal of advertising, the value of which must prove considerable to him in time. This particular exhibition was styled "The Mikado's Garden," it being mainly a chrysanthemum show, and most of the booths were decorated in Japanese style. The young ladies who presided at them being also arrayed in the dress peculiar to the subjects of the Mikado.

Ornamental Fruited Plants.

Some demand has already appeared for plants of this character that can be used for decorative purposes, and this demand will probably be stimulated as a better supply of such plants becomes available, for the beauty and lasting qualities of a well berried ardisia, for instance, will prove a sufficient recommendation as the plant becomes more widely known.

And while there will probably be a special call for plants with bright berries at the holiday time, yet their use will not be confined to that period alone, and if well grown will be readily found many purchasers in the regular course of trade.

In the front rank of plants that are grown for their berries is *Aralia crenulata*, to which reference has already been made. This is the most prominent representative of a somewhat extensive family and though introduced from Mexico about three quarters of a century ago, yet is not nearly so common as its good qualities deserve.

The best and most shapely plants of this ardisia are obtained from seeds, and early in the spring is a good time to sow them. The seeds may be sown in pans or boxes of light soil which should be placed in a moderately warm house, and under favorable conditions will soon germinate. The special object being to keep these plants strong and stocky, they should be pricked off into boxes as soon as they have made a few leaves, and in which they may remain until potted off into 2½ or 3-inch pots, and from the latter they may be shifted on as becomes necessary into 5 or 6-inch pots, and in all cases the shifting operation should be performed before they become so pot-bound as to lose color.

A moderately rich, light loam is suitable as compost, for though very useful in certain soils yet for ardisias peat is not absolutely essential.

Regarding temperature it is well to avoid extremes, as when kept too warm these plants are apt to become dirty, scale being quite partial to them under such circumstances, and if kept too cool their growth will be slow and they may also suffer from over-liberality in the matter of watering, especially when in a low temperature, so it would seem that it would be the wisest plan to observe the injunction to "be temperate in all things" when growing ardisias, and to regard a temperature of 50 to 55 degrees as the happy medium.

A COMBINATION OF FLOWER SHOW AND CHURCH FAIR.

The improved varieties of *Solanum capsicastrum* will also find an opening in this list, and being extremely easy of cultivation should become very popular.

These should also be raised from seeds and may be grown in a greenhouse temperature successfully, the essentials of their cultivation being a light rich soil and an abundance of water. Among larger growing plants of this class should be mentioned *Aucuba Japonica*, one of the hardiest plants for decorative purposes that is to be found in the market, and doubly attractive when covered with a crop of large red berries.

To secure the latter, however, fertilization is necessary, as the male and female organs are not combined in the same flower. The *aucubas* will stand much exposure and abuse and in fact are best in rather small pots, as when given too much liberty they are more likely to run to growth than to produce berries.

Some of the smaller growing oranges are also highly ornamental, though any of these will be somewhat slower in attaining a salable size than the plants previously referred to.

Very pretty examples of Mandarin oranges in 6 and 8-inch pots have been seen during the present season and another variety having still smaller fruits than the above is the so-called Myrtle orange, the fruits of which are about the size of walnuts and the foliage somewhat similar in size and shape to that of a myrtle.

One more useful plant of this class though of diminutive size is the "Bead plant," *Nertera depressa*, which spreads rapidly over the surface of the ground its tiny bright green leaves so as to form tufts, the latter being dotted over with bright orange berries about the size of small peas.

This plant may be easily increased by division and prefers a cool house, and also to be shaded from direct sunlight.

W. H. TAPLIN.

Looking Backward.

As each succeeding year draws to its close it is not inappropriate that we look back and review the work we have done, the seeds we have sown. Have they been

of the choicest varieties which have, or will, produce specimens and varieties so grand and beautiful that we can be proud of the examples that our labors have contributed to add to Flora's realms?—or have they consisted merely of a very ordinary stock intermixed with a positively vile strain of obnoxious weeds that will not only ruin our own gardens but carry devastation and ruin as far as their influence reaches?

Some of us are growing old in years and in our business, and without realizing it possibly, are looked upon by the young men with whom we are thrown in contact as worthy—shall we say models? How important then that our example be such as will only inspire these coming florists to the purest thoughts and highest motives. How important for instance, that a gentleman once honored by being elevated to the chief magistracy of a great city should in addressing a company made up largely of young men utter no word that he would not willingly let his mother hear. And while we should guard our utterances we should also remember that we have no right at our suppers or

banquets, or conventions or anywhere, to tempt the appetite for strong drink by placing it within the reach of others who may not have courage and strength of will to resist the sight of it; not one of us but can point to some "poor worthless sot" who once stood high as "the grower of the finest stuff in the neighborhood." This should not be so. Our trade is one of the grandest and most emulating, and the world calls for improvement continually, the rising generation should excel the present in all points of excellence, freed from the evils that now exist.

ALEX MURDOCH.

New Carnations.

Mr. E. C. Hill, of Richmond, Ind., recently exhibited at a meeting of the Chicago Florist Club bunches of specimen blooms of the new carnations raised by Mr. Fred Dorner, of La Fayette, Ind., and purchased by Mr. Hill. They were so excellent that we had photographs made of some of them and present herewith illustrations of individual flowers, life-size, engraved from these photographs.

The one named H. E. Chitty gives special promise of usefulness. It is a cross between Century and Grace Wilder, and is in the way of the last named sort, but deeper in color. But in addition to its color the eye is at once attracted by the strong, sturdy stems which carry the flower boldly erect and are beautifully clothed with foliage.

Edwin Lonsdale is a very large flower of a beautiful salmon pink shade, and is certainly an acquisition, though it does not have the strength of stem possessed by the foregoing.

Hoosier is a beautiful shade of scarlet and a remarkably large flower, the blooms being borne on good strong stems.

The other varieties—and all were promising—were Fred Dorner, scarlet, finely fringed; Mrs. Harrison, large, pure white; Ben Hur, pink; Annie Wiegand, pink, finely fringed, a seedling from Grace Wilder, and George Hancock, a strong, well built up flower of good substance, creamy white, finely fringed.

Carnation Lamborn.

How about the keeping qualities of Lamborn? With me it is decidedly lacking in this respect. I have also heard those say who have handled it in quantity that it was the poorest keeper of all the carnations without exception. Valuable for immediate use, but not for shipping.

Elmira, N. Y. GROVE P. RAWSON.

Best Carnations.

A young florist would like to ask a question from the older and more experienced members of the craft. Which are the best selling and most profitable carnations to raise in the winter season, say from four to six kinds? A. S. L.

Some specimen blooms of the new carnation, Louise Porsch, have been sent us by Mr. John McGowan, Orange, N. J. They are in the way of Buttercup, but

CARNATION EDWIN LONSDALE.

the plant is said to be a stronger grower and free bloomer. It is a cross between Albert McGall and Buttercup.

Easter Plants.

In response to a query regarding the proper treatment of Easter plants at this time, Mr. James Dean, Bay Ridge, N. Y., has kindly prepared the following at our request:

"Easter coming early this year, on the 29th of March, it would be well for those in the trade who are forcing plants to be on their guard. At present it looks as if we were going to have a cold winter and it will not do for the grower to let the temperature of his houses run low for his Easter plants when Easter comes in March.

"Lily plants to be in flower for Easter should for the smaller bulbs be six inches above the pot, the 9 to 12 inch bulbs 12 inches above the pot. The flower buds should now be developed, which will be readily known by an enlargement of the top of the plant, or crown as it is called, which can be plainly felt by a slight pressure of the hand.

"Lilies in the above condition, from date will require a night temperature of at least 65° until the buds are well advanced in size and the grower is certain he will be in time with his flowers. It will then benefit the flowers to reduce the temperature and thus harden them, which will certainly increase their market value, they finding ready sale when those that are forced during the last month at a temperature of 75° to 80° cannot be sold for one half the price of good flowers that are properly grown.

"The hydrangeas will require about the same temperature as the lilies, the flower bud should now be ready to burst open. Be careful in syringing the plants at this time, at night or during cloudy weather, as the water remaining on the flower bud in its early stage is liable to rot it, the young leaves which surround the bud holding the water. It should be the grower's aim in forcing the hydrangea to have them far enough advanced so that he can maintain a lower temperature for at least ten days before the plants are

wanted. This will give the flowers a brighter color and enable the plant to stand cold draughts of air without wilting.

"Spiraea Japonica should now be brought in from the cold frame into a temperature of 55° at night.

"It is yet too early to begin forcing Rhododendrons, azaleas and genistas, for Easter, they requiring very little forcing."

Orchids in Flower at Whitinsville, Mass.

For some time the fine Dendrobium Formosum giganteum has been in flower here in the conservatories of Mrs. J. W. Lasell. We learn from English gardening papers that most orchid growers there do not succeed well with it, many managing to flower the plant only once and having to import a fresh supply every spring from Burmah and the Andaman Islands. Under the excellent management of Mr. McWilliam this dendrobe has done well here. Four plants received from the Messrs. Low, of Clapton, in June 1885, are flowering now the sixth time, are in splendid health and promise to keep on flowering yearly for any length of time.

Mr. McW. treats his plants to a three months' rest after flowering, at 45° temperature, which he thinks is one of the chief points to success: then he gives a temperature of 55° till growth is started and 70° to 75° till growth is finished; when ready to flower the plants are again put in a temperature of 55°. Grown in baskets, with rough fibry peat, charcoal, crocks and clean fresh sphagnum, and temperature as above, the plants ought to do well. This year the plants have had six, eight, nine and the largest stem twelve, perfect flowers (and one damped off before opening). The longest stem is 28 inches, circumference of same 2 1/2 inches, length of leaf 6 1/2 inches, width 2 1/2 in., 19 leaves on the stem. The length of the flower 5 1/2 inches, width 5 inches, petals 2 inches, sepals 3/4 inch, lips 1 3/4 inches. This dendrobe is well worth all the care required, and when got to flower as seen here ought to make any grower happy at the result of his skill.

The photograph of three plants (the

CARNATION H. E. CHITTY.

CARNATION HOOSIER.

fourth being out of flower) will show something of the plants as grown under Mr. McWilliam's care. W. S. December 15, '90.

[The photograph showed three plants in splendid bloom.—Ed.]

Seeds of Pandanus Utlis.

A Buffalo correspondent asks how to treat the fruit of *Pandanus utlis* to get the seeds out, and in response to our request Mr. W. H. Taplin has prepared for us the following answer:

"The seeds of *Pandanus utlis* are enclosed in tough, woody cells within the so-called fruit, and the only satisfactory method of getting them out is to allow nature to do the work.

"This is accomplished by planting the fruit entire, and in due time the seedlings issue from the base of the latter and come up in the form of a little clump, these being separated from the parent fruit when large enough to handle conveniently and then potted up individually.

"The number of seedlings from each fruit is rather indefinite, sometimes being but one or two, and in other cases running as high as ten or twelve."

Construction and Preservation of Greenhouses.

Since the *Am. Florist* began its career, numerous articles have appeared in its columns in regard to the proper way of building greenhouses, and also what measures and precautions would insure their preservation and continuance in a servicable condition for the greatest length of time.

A year or more ago the *Am. Florist* gave some data concerning the length of time that several greenhouses had been in use, and at various times the subject "what are the most adaptable and most effective preserving mediums" has been treated of in an indifferent manner. The subject of "how to build greenhouses" has been quite thoroughly discussed, but that of preserving them after they are built has been very greatly neglected.

The greater number of greenhouses are not properly constructed in the beginning, and very feeble, if any efforts are made to prevent decay, and even when such houses

are regularly painted, their defective construction will not permit the owner to reap the benefit of this secondary mode of preservation.

The writer anticipates a good portion of murmuring and criticism from the older and wiser class of readers, but to these "sage fathers" allow me to say, that I make these contradictory assertions with profound respect and deference to their greater experience, and consequent authority upon such subjects.

I have very often heard inquiries and remarks made about what is the best paint and also complaint of "peeling off." For greenhouse painting I think that the best white zinc, mixed in pure raw linseed oil, with a slight addition of good dryer is the best. It should only be applied when the wood is perfectly dry, and it should not be made too thick, especially the first coat, and the second coat should not be applied until the first is perfectly dry and hard. In this way, and by repainting with one coat of ordinary thickness every two or three years, the wood becomes practically impregnable to atmospheric changes and consequently decay is impossible. This is about all that constitutes the seemingly difficult problem of preventing decay.

And now I will give my opinion, based upon personal observation, as to what is the proper way of building greenhouses, or portions thereof, so that when paint is applied to the exposed surfaces, it will be of real benefit.

In the first place, how often we see that hum-drum idea, both in print and in reality, about using rough lumber for the inside or first thickness of the regulation double boarded wall. This is just the source of all evil in regard to paint not lasting. Not long ago I visited a prominent grower's establishment, and in walking along the outside of a greenhouse I saw several places where water was dripping from the lower edge of the boards. Upon closer examination I found that it came from the inside of the wall. I went into the greenhouse and there I beheld the antiquarian's delight, viz: Rough unmatched hemlock boards, and the water soaking into the wall.

Now how is it possible for paint to adhere to the outer surface of the wall and check decay, when the very elements which

it is intended to resist, are doing the very thing which we wish to prevent, from the most advantageous point of attack, viz: the inside of the house.

In my estimation the model greenhouse wall is constructed in the following manner: Set good locust posts four feet apart and deep enough to prevent the house from spreading. Upon these place the gutter of good sound pine, 10x4½ inches. Next take good quality pine clap boards, paint the ends and where they come in contact with the posts, and nail on the inside of the posts with the planed side next to the posts. After the first thickness of boards is nailed on, give the rough side a thorough oiling with crude petroleum, then tack on the sheathing, I think tar paper is preferable, and then nail on the second thickness of boards, having previously oiled the rough side with the crude petroleum and painted the ends. When the wall is finished give one coat of paint according to directions and when dry, fill all nail holes, etc., with putty and apply the second coat of paint.

This gives a perfectly clear wall, not marred by unsightly divisions and water traps such as are found in all houses where the posts are inside of the house. And the outside is protected to a great extent by the projecting gutter. A house built in this way will last 25 years instead of the usual 10 or 15 years.

Rahway, N. J. JOHN W. SALING.

Catalogue Premiums.

Mr. W. A. Harkett in the issue for December 25 hits the nail square on the head when he says "is not the premium business being overdone." Last year we received catalogues from some forty to fifty wholesale and retail florists, and about one-third of this number offered plants with premiums in their retail lists, which when both were figured up, cost less than the same firm offered the same plants for at wholesale. Is this fair to the retail florist who has bought a large portion of his stock from these same firms? We would like to hear from others on this point, including the editor of the *Florist*.

C. H. B.

It is certainly very unwise for a business man to sell at the same price to both wholesale and retail buyers. And if the

premiums given are of such value as to reduce the price of the whole to wholesale rates, it is practically the same as selling direct to the retail buyer at wholesale prices. We believe that some of the extravagant premium offers and collections offered are due to ignorance, and we might almost add lack of common sense, on the part of the maker of the catalogue. He goes some other catalogue man "one better" without knowing whether he can afford to make such an offer or not, and without stopping to think that he has by this means reduced his retail price down to perhaps even below wholesale rates. And that it costs more to sell a thousand plants at retail than at wholesale every one knows. This and similar questions will continue to be a source of vexation until the actual cost of growing each plant to a marketable size is ascertained by each grower, and a more careful computation is made of the comparative cost of marketing the plants at wholesale and retail. When prices are based upon the actual cost of producing and marketing instead of upon guesswork there will be a change, for no man will drop his prices below the cost fine when he knows where it is. As matters now stand we seriously doubt if one grower out of a hundred knows when he has cut prices below the cost of producing and marketing.—Ed.]

Christmas Prices.

ED. AM. FLORIST.—It is gratifying to a retail florist to read the reports from all the large trade centers that flowers were plentiful, yes, too plentiful, it seems, at Christmas. I hope the growers of flowers will come to their senses sometime if they do not at an early date. I am of the opinion they will kill the goose that laid the golden eggs in the shape of dollars at Christmas, and the goose undoubtedly done it to some extent already. In your last number you tried to explain the plentiful supply of flowers at Christmas with the statement that the great additions of new houses and establishments devoted to the production of flowers is the main cause of increased supply. Of course this cuts some figure in the grand total, but I have another explanation to offer, from not only mine but several brother retailers' experience. Not only this year but even a year ago, we experienced a great falling off of our regular flower buyers at Christmas. From my own experience I know some of my customers who got caught at Christmas two years ago, because they ordered heavily without asking prices, and when they received their bills swore they would never buy another flower at Christmas, and I know several who have kept their word. They will come in and buy a few days before Christmas instead. We can not give any reasonable excuse for charging 50% more at Christmas than three or four days before. This year there was a very noticeable absence of the usual flower buyers. The people who did patronize the florists were such as do not buy flowers very often, and consequently were not posted as to the ruling prices at other times, but no doubt they will find it out one by one, and thus I expect to see the florist's business again divided down so before long it will be the same as New Year's day. This year New Year's day was no different from any common day; probably a little better than an average day, but not much.

Now, I think there is no denying but some of the florists who control the principal markets, and thus regulate prices for the country, whether they be the

wholesalers, the growers, or both, are injuring the business to a great extent by their insisting on double prices for everything at Christmas. You said in the last number of the FLORIST, commenting upon the situation, "It seems flowers are produced even at Christmas in larger quantities than can be sold at paying figures," or words to that effect. Now you, as well as every body in the trade, know that if roses can be produced a few days before Christmas at 8 to 10 cents there is no reason why they should not be sold at a paying figure even then at less than 20 or 30 cents. And this is not all, the retailer has to be satisfied with stuff that a grower would not think of bringing to him a week later. My reason for asking you to give space for this in the AMERICAN FLORIST is that I think it is a question that will need a little airing, and I hope it will be discussed through your columns and some good come from it.

St. Paul, Jan. 7.

ATG. S. S.

Harvesting Pampas Plumes.

The group of photographs from which our illustration engraved gives a number of views upon the grounds of Mr. Joseph Sexton, proprietor of the Santa Barbara Nursery, Goleta, California. In the lower left hand corner is a single plant with the figure of a man in the foreground showing the comparative height of the plant which is probably a specimen. The other views show the plumes cut, and going through the processes of curing, preparing and packing for market. Mr. Sexton was the first to grow the plumes in quantity for market and the business has grown into a very considerable industry.

New York.

The New York Florist Club gave its annual dinner "etc. etc." at Morello's famous restaurant last Saturday night. All branches of the trade were well represented, nearly one hundred sitting down to the elaborate spread. The long tables were formed square-like and were most beautifully decorated. Each prominent artist of the city did his best and the result was a grand exhibition of table designs. Beauties that are usually sold "by the yard" were arranged in tall vases on the four corners of the tables, baskets of tulips, hyacinths, jonquills, lily of the valley were placed around the other edge, while designs in roses adorned the center. The boutonnières even were "miniature gems of art."

There were many interesting bits of prospective scenery, scattered here and there. In one spot Mr. E. Asmus sat beneath a beautiful bunch of lilac, and the word was passed round that "the wind was blowing through Asmus' lilacs." In another spot Mr. John N. May was over a basket of his handsome Laings, while Mr. John Taylor's face looked over the beautiful basket of Madame Cusins that lay before him. It was remarked that the Climbing Perle possessed some of the traits of the sunflower, as the ones placed before Charlie Anderson showed a decided tendency toward that gentleman. It was a happy crowd. There was music and song by the club's musicians, while the elaborate menu was consumed.

When a just verdict was pronounced on the same, the President, Mr. Alex Burns, opened the "third programme" by an address of welcome to the visitors; the Secretary, Mr. W. S. Allen, then read letters of regret at being unable to attend from many prominent men throughout the Union, among which was one from

Mr. Stewart, of Boston, (the Secretary of the Society of American Florists) deeply regretting his inability to attend owing to a meeting of the Executive Committee at Toronto, and expressing the good wishes of the Boston Club. A call for three cheers for Stewart was enthusiastically responded to. Great regret was expressed at the absence of Mr. John Thorpe, owing to illness. (There was a vacant chair draped in smilax for your John.)

Mr. O'Connor then sang a song. The "Health of the Boston Club" was also responded to by Mr. Woods, the representative from the Hub. A banjo solo and topical song by Mr. Johnson followed, when "The Health of the N. Y. Club" was responded to by Mr. A. Burns. Mr. Forsterman, the famous oncidium grower, then sang his favorite song.

The Society of American Florists was eloquently responded to by Mr. John N. May, who expressed the hope that every florist in the country would join the society. A "stump speech" and "darky characteristics" were given by Mr. Foley.

The Retail Florist was responded to by Mr. Lawrence Hafner, the well known and popular artist, who dwelt at great length on the possibilities of the future of our trade. Mr. Hafner was the orator of the evening, his response made a great impression and he resumed his seat amid tumultuous applause.

The grower's cause was well espoused by Mr. Chas. Anderson, while "The Seeds" was well covered by Mr. McAllister.

"The Wholesale Florists" was responded to by Mr. John Young, and The Rubber Hose was "mended" by Mr. Hull. Horticultural architecture was very ably discussed by Mr. Chas. Weathered and Mr. Wm. Siebrecht spoke to the toast "Fraternity."

After numerous songs and solos Mr. Ernest Asmus gave an original dramatic sketch. After which an attempt on the part of Mr. Wm. Elliott to sell the house at "auction" brought the long list of pleasant surprises to a close and ended an event that can never be forgotten by those who had the good fortune to be present.

Business during the week was very good taking everything into consideration. There were many large balls and receptions given during the week, making prospects much brighter. Bulb stuff is coming in very freely. Violets are selling fairly well. A steady demand for fine carnations. The hybrids coming in are poor as yet. Lilac is very good and selling well. Little demand for orchids. Roses plentiful. What will you have for Easter? is a question already asked.

JOHN YOUNG.

Chicago.

Business is decidedly poor for the season of the year. In consequence of the high demand prices have been cut all to pieces, in many cases they are absurdly low. The recent holiday experience seems to have entirely demoralized the market, and many sellers are as quick now to cut prices as they were to hold them up before Christmas. Madam Perle's N. Y. hotel has been bought at \$3 a hundred, Mermets and Brides at \$6, La France at \$8, and Bon Silenes at \$2. Such prices at this season of the year have never been known here before. Violets are down to 75 cents a hundred, long stemmed fancy carnations have been bought for \$2, a hundred and Roman hyacinths at the same price. One concern bought 3,000

carnations the other day for \$30, and these were retailed at 25 cents a dozen. Violets were also retailed at the same place for 25 cents a bunch of 25 blooms.

There is a big supply of all flowers except American Beauty roses. The cut of violets is simply immense.

One grower has sent in a lot of cut blooms of the freesia, but it seems impossible to work up a demand for them here.

Frank Bentley reports a growing demand for orchids. The flowers of the small varieties of cattleyas such as *C. Percalliana* retail readily at \$1 each while no difficulty is experienced in obtaining \$1.50 each for blooms of *C. Triane*. He gets some few sprays of *Phalenopsis amabilis* which he sells at \$2 to \$3 a spray. He finds but little demand for cypripediums and has to work off those he gets by using them up in baskets and similar arrangements. Good sprays of *Odontoglossum crispum* retail at \$1.50 to \$2 a spray and *lilias* at 50 cents a flower. Some of the oncidiums which have good sized flowers sell well at the same price as the odontoglossums. He finds difficulty in disposing of the blooms of *Lycaste Skinnerii*. They don't seem to take very well with buyers.

At the meeting of the Florist Club held last Thursday a committee was appointed to arrange for a social meeting of the members and their wives and sweethearts. There will be music and supper followed by dancing. Messrs Hauswirth, Bentley and Curran have the matter in charge, and cards will be issued as soon as arrangements are completed. The adjourned session was held at a new alley, which change resulted in some curiously constructed scores. Future adjourned sessions will probably convene at the old place.

Charles Nelson will soon build a range of greenhouses at the corner of Robey street and Montrose boulevard. He will grow cut flowers.

Paul Krohn, who was some time since seriously injured by being thrown from his wagon while driving, is able to be around again but is not yet very strong.

Mr. A. Dimmock, representing F. Sander & Co., was in the city a few days since and visited the various orchid growers.

Tom Rogers thinks he should now succeed to the title of "King fakir." He says they used to call him the "Prince fakir," and now Neal is gone he sees no reason why he should not succeed to the Kingly title formerly worn by that worthy. But it is claimed by others that the title can not yet be legally transferred from 149 State street.

The Horticultural Society of Chicago held its first quarterly meeting last Saturday afternoon at the Palmer House. There was a large attendance and much interest was manifested. Fifteen new members were added to the list, among them were Mrs. A. Dunlop and Messrs P. D. Armour, J. Q. Adams, J. F. Hurlbut, Charles H. Wacker and J. F. Tucker. There was some discussion as to the advisability of an attempt to give a mid-Lent rose and orchid exhibition, and as a result a committee was appointed to confer with the Florist Club regarding same. That there might be no difficulty of a financial nature a guarantee fund of \$500 was suggested, and in a very few moments the sum of \$500 was subscribed by those present and the paper placed in the hands of an active member to secure the remainder. A committee of three was appointed to draft by-laws and an order of business. The meeting adjourned subject to the call of the president.

Paterson, N. J.

Well, how was your holiday trade? Was it up to an average of previous years? Do you think the McKinley bill will eventually wipe out all traces of the florist's business? These are some of the pertinent questions asked about this time. As far as ascertained the holiday trade in this section was quite up to the average, and experiences would seem to indicate that the florist's trade is able to maintain its own under most trying and untoward circumstances. It is true there are not so many fancy pieces made up for Christmas and New Years as formerly, but then the number of orders are greatly augmented, and the flowers rapidly vanish in the shape of \$2, \$3, \$5 and \$10 assortments put up in neat boxes and delivered at a great saving of time, labor and expense over former methods. And although the orders for fancy, expensive baskets are not so frequent as formerly, they still come along occasionally and add variety, charm, and profit to the business. Of course these observations apply more particularly to Christmas, as for some years it has become more and more manifest that New Years, as a period of extravagant expenditure and display, is greatly surpassed by Christmas.

The December just past was far more characteristic of the season than several of its immediate predecessors. This was particularly the case with December, 1889, when, on account of its extra mild temperature, many viscerers predicted that the Gulf Stream was encroaching so close to our shores that winter weather and its attendant pleasures would only be regarded as rarities of the past, and natural ice a phenomenon described by the aged to the astonished senses of their children and grandchildren. But it is

evident that the Gulf Stream is not climbing over New Jersey this winter anyway, as we are already harvesting good ice, and the fact that the mean temperature of the December just past was about thirty-two degrees lower than that of December, '89, is also quite favorable. Christmas day of '89 was remarkable for its warmth, the thermometer standing at 65° nearly all day, reaching 55°, the lowest point, only at 10 p. m., with a mean temperature for the day of 62°, while the thermometer for the Christmas just past, ranging at 20°, 25° and 15° for morning, noon and night, gives us a mean of 20°. Only think, a difference of over 40° in the two Christmas days! The lowest point touched during the month was on the night of the 28th, when 5° was indicated about 10:30 p. m., nice clear, ten partly clear, and twelve all cloudy days, the atmospheric divisions. The three or four fine days preceding Christmas were a wonderful help to the growers of flowers. Christmas day was also fine, but was followed on the 26th with a considerable snow-fall and miniature blizzard.

January 2, '91.

H. E. CHITTY.

News Notes.

ELMIRA, N. Y.—Holiday trade excellent. Better than last year. Increased demand for roses, carnations and violets.

KALAMAZOO, MICH.—Samuel Batson is a new florist here who is not mentioned in the directory and he should be added to the list.

NEW ROCHELLE, N. Y.—The Rose Hill Florists' Society will give its first annual ball at the town hall Thursday evening, February 9.

JANESVILLE, WIS.—Holiday trade in flowers about the same as last year. Could have sold more but the high prices made sales next to impossible. Holly and green sold well, more demand for holly wreaths and stars than ever before, Christmas trees were in good demand. Don't think the trade much benefited by putting the prices on flowers so high at holiday time.

UTICA, N. Y.—Holiday trade was very good considering the high prices which it was necessary to pay for what stock was ordered from other points. Roses sold at from \$1.50 to \$3.50 a dozen. Carnations, narcissus, hyacinths, poinsettias, and nearly all other flowers sold at good prices. Nearly every florist sold out clean, and could have sold more if to be had at anywhere near reasonable rates. But florists did not dare to order at the rates quoted, knowing their customers would not pay the prices it would be necessary to ask.

WASHINGTON, D. C.—The holiday trade in cut flowers has been exceptionally satisfactory here this season. The supply was large, but the demand equally so and prices remained firm. Plants for decorative purposes were less in demand than usual, but the falling off was slight. Roses, especially La France, De Watteville, Mermet, Gontier, Am. Beauty, Meteor, Cook and Niphetos, were fine and abundant, commanded good prices and so far as I could learn every one of the prominent dealers sold out his entire stock of them.

SPRINGFIELD, MASS.—The annual meeting of the amateur horticultural society was held January 2 and the following officers

were elected: President, C. L. Burr; Vice-Presidents, E. D. Stock, Joseph Aumer, Mrs. Helen M. Packard; Secretary, G. H. Lapham; Treasurer, L. D. Robinson; Directors, C. L. Simons, G. E. Gengenbach, E. A. Graves, J. K. Burbank, G. H. Wells, J. S. Landers, S. T. Hammond, Frank Belden, G. E. Phelps, L. D. Boyington, H. P. Hunt, M. R. Warner, D. P. Luddington, C. D. Goodell. The secretary reported the membership was 540, an increase of 266 during the year. The treasurer's balance sheet showed that \$1,006 had been received during the year, the expenditures being \$492. The retiring president, C. L. Simons, was given a vote of thanks.

ORANGE, N. J.—At a recent meeting the New Jersey Floricultural Society formally resolved to disband. The society was organized four years ago and has held splendid exhibitions each year, but the patronage accorded it has been insufficient to meet expenses. At the meeting the matter was discussed at length and it was agreed that in view of the lack of appreciation on the part of the public in the aims of the society it would be unwise to continue its existence. It was decided to pay 50 per cent on the premiums of the show given last November. A vote of thanks was tendered to the retiring officers, and then a resolution disbanding the society was adopted. It is probable that out of this society will be organized a florists' club, but no definite plans have yet been made.

Copper Sulphate for Lilies.

Rev. C. Wolley Dod stated recently in the *Garden*, and also at a meeting of the scientific committee, that he has found very good results with commoner lilies as well as with roses by the use of sulphate of copper as a preventive. Three pounds of sulphate of copper, with costs wholesale less than 3d. a pound, are dissolved in water, and two pounds of quinine, separately. These solutions are then mixed together in ten gallons of water, and splashed upon the young growth, to which it does no harm. "I have found this is also very useful for the cure of the mildew (*Peronospora ficariae*), which has proved here so destructive to the large variety of Christmas roses. Another remedy recommended for mildew is to dress the surface of the ground in early spring before growth commences with finely powdered sulphate of iron. One pound is sufficient to mix in a wheelbarrow load of soil, and will dress a large surface. I have seen this treatment recommended in the *Kew Bulletin* to prevent potato blight. I have used it for lilies and it seems successful."—*Gardeners' Chronicle*.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany payment. Plant ads. not admitted under this head.

SITUATION WANTED—By practical rose and cut flower grower. Good references. Address: Box 1, Central Valley, Orange Co., N. Y.

SITUATION WANTED—By a German gardener; N. aged 30; single; competent in all orchards, private and commercial. F. H. PERA, Lagrange, Ill.

SITUATION WANTED—As gardener and florist; can give good references. Address: W. W. DEGRAU, Hudson, Summit Co., O.

WE ACKNOWLEDGE the receipt from Mr. Wm. Trelease, Director of the Missouri Botanical Garden, St. Louis, of a volume of 165 pages containing much information of interest regarding the work of the garden and matters connected therewith. It is handsomely illustrated with fine half-tone plates of views in the garden and a portrait of the late Henry Shaw. A short biographical sketch of Mr. Shaw is also given, and the act of the General Assembly of Missouri authorizing the creation of a trust for the management of the garden; the last will and testament of Henry Shaw, made in pursuance of this act; the deed of endowment of the School of Botany; the report of the inaugural exercises of the school, including the address of the Professor in charge; the report submitted to the Directors of Washington University on the work accomplished by the School of Botany during the first five years of its existence; the first annual report of the Director of the Garden, for the year 1889; the first annual flower sermon, preached in May, 1890, under the provisions of the will of Mr. Shaw, by the Bishop of Missouri; and the proceedings at the first annual banquet of the Trustees.

THE ARTICLE on color published in recent issues has excited much comment and we have received many letters regarding the issuing of a chart of colors as mentioned. One suggestion is that a number of those who issue catalogues club together to take a large quantity of the charts, to bind in their catalogues for the convenience of customers, and thus reduce the cost of the charts to the minimum by having them made in 100,000 lots. This plan is desirable not only from the fact that the cost of each chart would be thereby very considerably reduced, but it would at once disseminate the same among flower lovers all over the country. We should like to hear from catalogue men on this matter. If these charts could be supplied at a low cost would you be willing to take a sufficient number to bind one in each of your catalogues? If orders could be secured for not less than 100,000 copies the cost would be so reduced that we believe the financial obstacle would be overcome.

THE SCHEDULE of prizes offered by the Massachusetts Horticultural Society and programme of meetings for the year 1891 has been received from our Boston correspondent. The total amount appropriated for prizes and gratuities, to be awarded at the various exhibitions during the year, is \$6,800, of which \$2,050 is for plants, \$1,750 for flowers, \$1,700 for fruits, \$1,000 for vegetables, and \$300 for gardens, greenhouses, etc. Many very interesting subjects are listed in the programme of meetings for discussion.

These meetings are held each Saturday. They began January 3 and subjects are assigned for each Saturday up to March 28. On January 24 a paper on roses will be read by Mr. John N. May, of Summit, N. J., and on February 7 one on chrysanthemums by Mr. John Thorpe, Pearl River, N. Y. The programme can be had on application to Mr. Robert Manning, the secretary of the society, whose address is Horticultural Hall, Boston.

ONE OF the most valuable offshoots from the Society of American Florists is the Florists' Protective Association. Its object is to protect members from the possibility of being taken in by a certain class of dead-beats who have attached themselves to the trade and to place before the seller in a proper light the honorable business man. In a word to separate the wolves from the sheep, and certainly this can work to the disadvantage only of the wolves. The annual membership fee is only \$2, and this entitles members to all the information sent in to the officers. Certainly no one who sells to the trade can afford to stay out of the Association. The address of the secretary is given on the first page of each issue.

WE HAVE received a copy of the "Album et catalogue des plus belles variétés de chrysanthèmes" issued by R. Sautel, Salon, France. It contains ten colored plates showing flowers of ten varieties, one half natural size. The plates might be worse, but they seem hardly worthy the praise bestowed by the London *Gardeners*. We advise our English contemporary to secure a copy of "The Golden Flower" issued by L. Prang & Co., Boston, Mass. If it considers Sautel's plates good, it will probably be at a loss to properly express its appreciation of those which appear in "The Golden Flower."

JUDGING BY POINTS.—In support of his statement in a former article as to the unwisdom of attempting to judge plants and flowers by a scale of points, Mr. W. T. Bell sends us some clippings in which the assertion is made that the Pennsylvania Hort. Society has discarded the system after a trial, and that Mr. John Thorpe speaks of the scale with disrespect. It is possible of course that the disadvantages of the system may outweigh the advantages. Mr. Bell adds that a good judge can do good work judging by a scale, but that the system wastes too much precious time.

THE TREATISE upon "a new hollyhock disease" by E. A. Southworth which we recently noted as having appeared in the *Journal of Mycology*, issued by the Division of Pathology of the U. S. Department of Agriculture, has been printed in pamphlet form for distribution. It may be had on application to the chief of the Division of Vegetable Pathology, U. S. Department of Agriculture, Washington, D. C.

NEARLY EVERY subscriber when renewing a subscription for the FLORIST adds some complimentary comment. While these are all appreciated it is of course impracticable to print them all, but one recently received puts the matter in such an original way that we give it to our readers. "Enclosed find one dollar for fifty-two more bright and interesting evenings."

A COPY of the "Year book" issued by the Detroit *Journal*, has been received from Mr. W. H. Brearley, the proprietor of that paper. Considerable space is de-

voted to a description of the flower shows given at Detroit under the direction of the *Journal* in '89 and '90.

CONSIDERABLE space in the January issue of the *American Garden* is devoted to the begonia as previously announced. The frontispiece is a well executed colored lithograph showing blooms of four seedlings which originated with Siebrecht & Wadley.

AT A CONFERENCE of the Royal Hort. Society of England held last September, Mr. E. Lemoine, of Nancy, France, read an essay on "Les Glaieus Rustiques," and he has now sent us a printed copy of same. It is in the French language.

Catalogues Received.

J. M. McCullough's Son, Cincinnati, O., seeds; J. M. Thorburn & Co., New York, seeds; Wm. Mathews, Utica, N. Y. orchids; Ludwig Muller, Erlurt, Germany, horticultural books in German language; W. R. Shelnier, Avondale, Pa., carnations; Storrs & Harrison Co., Painesville, O., Plants, seeds and shrubs; L. L. May & Co., St. Paul, Minn., plants, bulbs and seeds; H. Cannell & Son, Swanley, Kent, England, seeds; same, chrysanthemums.

The World's Columbian Exposition.

During Director-General Davis' recent visit to New York City Mr. John Thorpe obtained an interview which is reported as follows:

Thorpe to Davis—"I am interested in the World's Fair horticulturally, and learning you were in New York I have taken the liberty of calling on you."

Davis to Thorpe—"I am delighted to meet you, and anxious to hear what you have to say about horticulture."

Thorpe to Davis—"The horticultural departments of all international exhibitions have hitherto been a prominent feature, but in my opinion no country has ever had the opportunity that we have to-day to make this department one of the most attractive features of the Columbian Exposition. It should be an exhibition not only worthy of America, but of the world."

Davis to Thorpe—"I acquiesce in what you say, Mr. Thorpe, you have the right idea, but it is very difficult indeed for me to appoint a man who has the same ideas as you and I have. I am always seeking information from men like you, who are not only practical but positive in what they say and do. This does not only apply to horticulture, but to all other departments of the World's Fair. When it comes to the appointment of a chief of the horticultural department I shall appoint a man who in my opinion is the best for the position. When I say the best, I mean a man who is conversant with all the branches of horticulture, if it is possible."

Thorpe to Davis—"Then you must avoid specialists, Mr. Davis. What is wanted is a man who is as familiar with flowers and decorative plants as every one ought to be with fruit, from the fact that decorative should be the feature of this department from start to finish."

Davis to Thorpe—"I am thankful to you for what you have said, and I shall be glad to receive any further suggestions from you, as it is my desire to make every department of the World's Fair a success."

JUNCTION CITY, KANS.—Wm Horlacher has succeeded Ziegler Sisters in the florist business here.

On Seed Trade.

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president; JOHN FORTLER, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1891.

Seed Warranty.

This may be a threadbare subject, but it is one of which no very satisfactory conclusion either to dealer or purchaser has ever been arrived at. The season of 1890 has kept this matter more pointedly in mind than any other in my experience.

I am more than ever convinced that the most careful, honest seedsmen in the whole trade ought not in justice to himself give any warranty whatsoever, either regarding the germinating powers or other qualities of the seed which he offers for sale. Here are some cases in point: Of a certain flower seed sold by me the whole stock for 1889 trade was grown and harvested in one place and at one and the same time. I received over a dozen complaints concerning this seed. In one instance the grower was a careful florist of my acquaintance who failed to induce over 10 per cent of the seed to germinate. On the other hand I have many times this number of voluntary testimonials not only of the germinating qualities, but of the general good results from this same seed stock. Remember these conflicting reports are all of one season's experience, the seed all being alike and of the previous year's growth. Had I ought even from a moral standpoint to be responsible for the failures even to the extent of refunding the amount paid or replacing the seed?

Every seedsmen it is safe to say has had more or less trouble with onion seed. I can cite four cases among my 1890 local customers, and can prove that the seed in each case was all from one stock and of 1889 growth, where results under as near the same conditions as is possible to be found, were of a conflicting nature. These complaints, by the way, were the only ones from this seed and were from near by points, while the stock was scattered all over the Union.

One of the growers of the quartette referred to above, reported fully one half "scullions" as a product of this seed, another in a town next adjoining had no fault to find and was so well pleased with the stock that he ordered his next season's supply six months in advance.

From another who had sown very thinly I have a voluntary statement that the seed must have grown "nearly 100 per cent," as there were no perceptible vacancies. A neighbor of his who sowed on the same date was very indignant that "we should have given him different seed," as he asserted we did, as less than half of his germinated.

Without going into the "whys and wherefores" as to the probable causes of these conflicting results I would like to ask any candid minded person whether I should be responsible to the extent of one cent for the failures referred to. The seed was fresh and good. It was precisely alike in each case. That the best of results were obtained from it in the great majority of cases can be proven.

No seedsmen can do more than to sell good, fresh seed, true to name, and I maintain that he should not be and can not be in justice to himself, responsible in any way for the result.

The seed business is peculiar to itself. It is nearer to nature than any other

trade, and to speak plainly, the only protection that purchasers can rightfully have is in dealing with concerns who have a "clean" reputation. There are plenty of such. Those who charge a fair price for their goods and are willing so far as genuine mistakes are concerned to make them right.

The average planter, large and small, would like to have his seedsmen insure a full crop for him. The speculator who borrows money would like to have his banker guarantee him profitable returns on the investment he proposes to make. Are there any money dealers who will do this? M. B. FAXON.

Boston, Jan. 5, 1891.

[Had Mr. F. given us his own trial test records in the cases named we should have clearer views on them. If the seedsmen knows from trials that his seeds do germinate under fair conditions he probably should not be required to give any warrant unless he sells his seed at very fancy prices. The greatest good to the greatest number would appear to be to sell good seed at as near the actual cost of production as possible. Now, if to secure himself against the failure by the careless or unwise planter, the seedsmen must warrant his seeds, then to cover possible contingencies and secure himself against them he must greatly advance his prices. Thus 90 customers who knew how to care for seeds would pay an added burden to insure the 10 careless ones, which is manifestly unfair; the same principle would apply to bulbs and dormant plants.—Ed.]

THE Higginum Manufacturing Corporation at 189 Water street, New York, have disposed of their seed department to the George L. Squier Manufacturing Company, who will remain in the same location and propose to make their house "the most extensive and perfect emporium of agricultural implements and plantation machinery on this continent."

KANSAS CITY.—The January 1 seed review claims 20 per cent increase in the past year's trade and growth of trade in California, Washington, Montana and Oregon.

ORIGINAL AND LARGEST GROWERS OF

LILIUM HARRISII, BETTER KNOWN AS THE BERMUDA EASTER LILY.

BULBS NOW READY FOR DELIVERY.

THE BEST IN THE WORLD FOR FORCING FOR WINTER FLOWERS. WE OFFER ONLY STRONG FIELD-GROWN BULBS FROM OUR OWN GROUNDS IN BERMUDA.

COPYRIGHTED, 1890, BY F. R. PIERSON, TARRYTOWN, N. Y.

From a photograph taken the week before Easter, 1890, showing a view in one of our new iron greenhouses, here at Tarrytown, 20 feet in width by 140 in length, of a crop of Liliium Harrisii in full bloom. This house produced over 15,000 flowers for Easter.

This is not only the best by far of all lilies for winter blooming, but it is one of the most profitable flowers that can be grown by florists. It is very easily handled, and the flowers being especially effective for decorative purposes, always command large prices. From its name some have thought it was a bulb for florists' use for forcing for the Easter market only. This is not exclusively so; it derives its name from the fact that, in Bermuda, grown in the open ground, it blooms at Easter time—hence the name "Bermuda Easter Lily"—but by growing it in this country in the greenhouse with successive lots, it can be had in bloom all the winter from early in December until after Easter; in fact, by special culture, all the year round, or as long as cut flowers are in demand. The fact that it can be forced into bloom by the Christmas holidays adds particularly to its value, as it fills in at a time when flowers are usually scarce and in great demand at high prices, but to accomplish this the bulb must be potted early in August, something depending upon after treatment and the temperature the bulbs are grown in. For this purpose our Bermuda-grown bulbs are indispensable, as in Bermuda the bulb reaches its highest development, and ripens off perfectly, and is ready for shipment usually by the middle of July—before bulbs in our own country have hardly begun to make their growth. Our bulbs being grown in the open ground, in a climate naturally adapted for their perfect growth, are particularly strong and healthy at any time.

The extent to which this Lily is being forced for winter flowers will be shown by a sale made by us to a large New York grower, who purchased 20,000 bulbs for his own use. We hear it said occasionally that Liliium Harrisii flowers will not keep—this is owing to improper handling. If cut as soon as open they can be kept for more than two weeks, if in a proper place. It bears shipping splendidly, and the two following letters will show. These were written acknowledging the receipt of flowers shipped last Easter.

J. L. Russell, Denver, Colo., writes: "The Lilies came in excellent shape. I don't think I lost one; it is a pretty good recommendation for your packing." The Fort Worth Nursery Seed and Canning Co., Dallas, Texas, writes: "The Lilies arrived in perfect condition, and we must compliment you on your packing. We would not have thought they would have carried so far packed dry."

THIS VALUABLE LILY IS OUR SPECIALTY.

We grow the bulbs by the acre on our own grounds in Bermuda. We were the first to grow it in large quantities and to offer it at reasonable prices, and we have always been recognized by the trade as HEADQUARTERS FOR THE BERMUDA EASTER LILY: supplying the trade as we do, both in this country and in Europe, and we hold by far the largest and the controlling stock of the genuine variety in the market.

The extent of our operations in this bulb alone will be best understood when we state that we expect to sell from OUR CROP of 1890, over

→ HALF A MILLION BULBS. ←

Be sure you get the genuine Liliium Harrisii. In order to secure "the true variety," purchase your Bulbs from original stock, which is known to be pure. The value of this Lily has led unscrupulous or ignorant parties to plant L. Longiflorum in Bermuda, planting it with Harrisii to increase their stock rapidly when Harrisii was very scarce, thus mixing the stock irretrievably, thereby rendering it absolutely valueless for forcing, and we have known instances where these mixed bulbs have been sold to large growers as the genuine variety, where large loss has resulted, and dealers should look with suspicion on bulbs offered at prices less than market rates, as the supply has never yet met the demand. "Mixed Bulbs" only being offered at reduced rates.

Large growers or dealers in this bulb should write us for special prices, stating quantity of bulbs desired, and we will give lowest estimate on the same by return mail.

F. R. PIERSON & CO., TARRYTOWN, NEW YORK, U. S. A.

OUR FREESIA BULBS ARE NOW READY FOR DELIVERY. They are of unusually fine quality, nearly twice the size of Bulbs usually sent out. Intending purchasers should write us for samples and prices, stating quantity wanted.

Philadelphia.

Business seems to be almost at a standstill, the past week it has been very dull all along the line. The bright weather has brought on the buds far in excess of any demand and the consequence is prices are away down. Perles, Gontiers, Niphetos, \$4 to 6, Mermets, La France, Brides and Albany, 10 to 12, Beauties 35 to 50, Magnas and Luings 50 cents for fine flowers, carnations 2 cents and lower. Better things are promised for next week and it is hoped that they will materialize.

One of the large growers thought that this Christmas would be like all of those gone before and his price of \$25 a hundred for Perles, Mermets and La France was demanded regardless of the state of the market or the protests of the dealers who were accustomed to depend on him for their supply. The elevation of prices at Christmas has received a death blow this season and we never expect to have another attack except in a very mild form. Six dollars is still asked for valley. We think this is a very high price as it cannot be sold for over a dollar a dozen and there is no profit in a margin of 25 cents as that will just about pay for the waste.

Small standard azaleas are now coming in and are a welcome addition to the stock of blooming plants. The poinsettias are about done and it is difficult to get enough blooming plants for the demand.

The bowling match for the turkeys was a great success some fifty florists taking part in it, no very large scores were made, but as a number of members rolled their first games the scores were very fair. George Anderson won the turkey in the 150 class with a score of 183, A. B. Cartledge won in the class over 125 and J. Lamb won in the novices class, each receiving a turkey. A pool table has been put in and it proves to be quite an attraction. N.

Rooted Cuttings Carnations.

NEW CHRYSANTHEMUMS.

MILLER'S "WORLD'S FAIR SET."

We have been to great expense, sparing neither time or money in collecting this unequalled set. Characteristic of the leading city of this country, we have named them in honor of our representative citizens:—FERD W. PECK, or GALLIA, and J. V. FARWELL, or W. N. RUDD, were two of the set of six seedlings that took the \$100 prize at Indianapolis; S. W. ALLERTON and GEO. R. DAVIS were raised by Monahan of Philadelphia, who has originated some of our finest varieties. CYRUS H. McCORMICK was raised by Jamieson, and is one of the finest of the present year's novelties. The remaining eight are the XXX selections of 1800 seedlings that were raised by the leading grower of this country. In comparing

them with the different sets sent out this year we unhesitatingly say that they are second to none.

LYMAN J. GAGE, a grand late white.

GEO. R. DAVIS, ox blood red, Wheeler type.

J. V. FARWELL (W. N. RUDD), Lavender without, rosy violet within, a fine keeper.

CYRUS H. McCORMICK, Dark deep yellow, shaded bronze red.

ANDREW McNALLY, Crimson scarlet, fine for exhibition.

POTTER PALMER, White seedling from L. Canning, very large.

FERD W. PECK (GALLIA), Rosy pink, fine exhibition variety.

CHAS. H. WACKER, Crimson scarlet, profuse bloomer.

ROBT. A. WALLER, Chamoise yellow, extra.

CHAS. T. YERKES, Bright scarlet and gold, fine cut flower variety.

S. W. ALLERTON, An immense white fine for pot culture.

MARTIN A. RYERSON, An improved Mrs. Frank Thompson.

FRED S. WINSTON, Cardinal and Indian red of the Carnegie type.

SET OF 13 FOR \$6.

Orders booked for the above and also 100 of the leading exhibition and cut flower varieties to be delivered early in January. Send for descriptive list. "Get the best, grow the best, and keep up with the times," is our motto.

Orders booked for the **PINK OSTRICH PLUME CHRYSANTHEMUM**, LOUIS BOEHMER, at market price.

Address **AMERICAN FLORIST CO.**, 54 La Salle St., CHICAGO

THE February issue (1891) of THE AMERICAN GARDEN will be especially devoted to Orchids. It will be racy, artistic, instructive, correct. For the first time in this country the question "What is an Orchid?" will be answered. Among the notable features of the issue will be the following articles and discussions:

A GENERAL VIEW OF THE ORCHID FAMILY.
THE BEST NEW ORCHIDS AT THE ROYAL
GARDENS, KEW.
ORCHIDS AT HOME IN BRAZIL.
ORCHIDS FOR BEGINNERS.

CYPRIPEDIUM.
METHODS OF CROSSING ORCHIDS.
ORCHIDS IN CALIFORNIA.
CONSTRUCTION OF ORCHID HOUSES AND
TREATMENT OF ORCHID PESTS.

The number will also contain an account of the Government Seed Bureau, by the ex-Chief of the Division. Every gardener, and especially every seedsman, should read this article. The number will be beautifully illustrated.

THE RURAL PUBLISHING CO., Times Building, NEW YORK.

Price, \$2.00 a year. In club with American Florist, \$2.50.

TO BE PUBLISHED ON THE 1st of FEBRUARY NEXT, AN AMERICAN EDITION OF THE

LINDENIA The "GRAPHIC OF ORCHIDS."

CONDUCTED BY

F. LINDEN, LUCIEN LINDEN, EM. RODIGAS, AND R. A. ROLFE.

The Colored Plates by the celebrated artists, P. DE PANNEMAEKER, A. GOOSSENS, and G. TEVEREYUS.

An American edition of the "LINDENIA" will be published regularly on the FIRST of EACH MONTH, and issued in half yearly volumes, each of which will form an Album of beautiful portraits, of the most beautiful and rarest of natural objects, NEW, RARE, or popular species, or hybrids of Orchids.

The plates are 14½ inches long by 11 inches broad, which will be found a most convenient size for use in the orchid house or drawing room. Each monthly number will contain FOUR PLATES with eight pages of text in English only, with Latin diagnosis. The descriptive and cultural notes of the Orchids figured will be given by M. M. LINDEN, RODIGAS and R. A. ROLFE, the horticultural press of every country has pronounced the "LINDENIA" to be "the highest class and cheapest illustrated publication relative to Orchids."

The printing and colored plates are executed in the most finished style, representing the Orchids illustrated in the most perfect and natural state, both in pseudo bulbs, leaves and flowers.

TERMS OF SUBSCRIPTION: Six Months (one half-yearly volumes with 24 plates) \$6.00, post-free, payable in advance.

APPLICATION SHOULD BE MADE TO THE PUBLISHER,

M. LUCIEN LINDEN, 100 Rue Belliard, BRUSSELS, BELGIUM.

— MAY ALSO BE HAD AT ALL THE PRINCIPAL LIBRARIES. —

A specimen number will be forwarded to any one applying to the above address.

FANCY. DAGGER.

EVERGREEN CUT FERNS

Especially for Florists' Use.

\$1.50 per 1,000; 5,000 for \$6.25; 10,000 for \$10.00.

Special attention paid to supplying the trade all winter. Sample lot of 250 ferns sent in improved mailing box, postpaid, to any part of the U. S. for 75 cents.

SPHAGNUM MOSS (Dry).

Long clean fibre, sack or barrel \$1.00; six barrels \$5.00; twenty barrels \$10.00.

L. B. BRAGUE,
HINSDALE, MASS.

MISSOURI NURSERY CO., Louisiana, Mo. Salesmen wanted; special ads; magnificent outfit free.

STARK NURSERIES, Stark, Mo. Nursery Founded 1853. Oldest in the West. Largest in the World. Best of everything. Nearly 600 salesmen sell our stock in almost every State and Territory. Annual sales exceeds that of any other Nursery. We sell direct through our own salesmen, cutting the middleman or middlemen, and deliver stock freight and all charges paid.

NO TREES

Look to the East for the best! Last year's bear-like whole root trees - or like plum, prune and apple trees on Malaga - the best plum stock grown. In the end other New & Old Frats - (to mail) ornamental root grafts, everything. No larger stock in U.S. No better. No cheaper.

PLANET JR.

IMPROVED FARM AND GARDEN TOOLS FOR 1891.

BETTER. Both Horse and Hand, THAN EVER; better and more money saving. We can not describe them here, but our new and handsome catalogue is free and interesting. A goodly number of new tools will meet your eye there. Among these: Gardener's Harrow, Cultivator and Pulverizer, combined, adjustable tool; Market Gardener's & Root Grower's Special Horse Hoe with Pulverizer; Special Furrower, Marked Ridger, adjustable wings; Saver Potato Horse Hoe, four tooth with vine turner; Heavy Grass Edger and Path Cleaner; new Nine Tooth Cultivator and Horse Hoe combined; Special steel Leveler and Pulverizer combined; All interesting, nothing we have ever made so practical or perfect. Some improved things too are grafted upon our older favorites. A capital LEVER WHEEL, instantly adjustable for depth, is a great feature, put on all '91 goods unless ordered otherwise. Now have our Hand Seed Drill been forgotten in the march of improvement, nor our Double and Single Wheel Hoes, Garden Plows, Grass Saws, etc. Some of them are greatly altered for the better; yet do not forget that no novelties are adopted by us without actual and exhaustive tests in the field. We therefore guarantee everything exactly as represented. Send for Catalogues now.

S. L. ALLEN & CO., 1107 Market St., Philadelphia, Pa.

Foreign Grape Vines for Graperies.

Splendid one and two year old Vines, true to name, grown by an expert. List of varieties and prices mailed on application.

HENRY A. DREER, 714 Chestnut St., Philadelphia.

GRAPES FAY Currant

Now Grapes - Kather, Rockwood, Eaton, and all others. Some of them are greatly altered for the better; yet do not forget that no novelties are adopted by us without actual and exhaustive tests in the field. We therefore guarantee everything exactly as represented. Send for Catalogues now.

Geo. S. JONSELYN, Fredonia, N. Y.

Montreal.

The Christmas and New Year's trade this season was very satisfactory. Good prices ruled and the supply of everything except roses was up to the demand. There was rather an overstock of Roman hyacinths; the demand for these seems to be on the decline. The demand for plants in bloom seems to improve each year, the choice being in favor of colored flowers; quite a number of azaleas and begonias were sold at good prices.

Wiltshire Brothers made a good display and did a good trade in their new store on Sherbrooke street.

W. T. Davidson, of W. B. Davidson & Son, mourns the loss of his wife, who died on the 29th of November. The deceased lady was highly esteemed by a large circle of friends. Brother Davidson has the sympathy of his brother florists in his great loss. MACK.

Los Angeles, Cal.

C. H. Hovey at "The Raymond" has added five new glass houses 75x11 each to their already large establishments. He is giving roses a trial under glass. No one so far ever succeeded here.

Roses have never been so plentiful as they have this winter owing to the warm weather and absence of frosts.

There are now in Los Angeles six exclusive flower stores, and as many more doing florist's work outside.

The Southern California Floral Society now has about 200 members.

Why don't we have more California notes in the FLORIST? I presume we are making more progress in proportion to our population than any other state in the union and we certainly have an abundance of well informed men fully capable of writing well on trade subjects.

The American Beauty has proved itself to be a grand out door rose this winter. Marechal Neil has been blooming profusely for the last ten days, as has Papa Gontier and La France. The Bride always mildews but gives a great many buds.

WITH this issue we present to each reader a fine colored plate of the new rose Waban.

A VARIEGATED La France is the latest. Two blooms are sent us by Brown & Canfield, Springfield, Ill. The flowers are identical with La France in form and fragrance, but the variegation is very marked.

IN ALL probability the appointment of Chief of the Horticultural Department of the World's Columbian Exposition will be made very shortly. Director-General Davis has announced his intention of submitting to the Commission the name of James D. Reynolds for the position.

Meeting of the Executive Committee of the S. A. F.

The Executive Committee of the Society of American Florists met in annual session at the Queen's Hotel, Toronto, Ont., on Tuesday and Wednesday, January 13 and 14.

There were present, President Norton, Vice-President Chambers, Treasurer Hunt, Secretary Stewart, and Messrs. Smith, Burton, Long, Welch, Temple, Dean and Falconer; also Messrs. May, Hill and Vaughan, who were elected as substitutes to represent Messrs. Jordan, Huntsman and Buckbee, who were absent. A telegram was received from Mr. Buckbee announcing the dangerous illness of his father, and expressing regrets at his inability to be present. Letters of regret were also received from the other absent members.

A number of prominent Toronto florists attended the session, and there were also present Mr. Scott, from Buffalo, and several gentlemen from Hamilton. On a table in the committee room were a number of large vases containing twenty varieties of seedling carnations from Mr. E. G. Hill, among which were some very handsome varieties; also a vase of roses grown by Mr. J. H. Dunlop, including American Beauty, Bride, Perle, and other popular varieties, all of them being unusually fine specimens and pronounced by the rose growers present to be equal to the best they had ever seen.

The deliberations of the committee were characterized by remarkable unanimity, and the large amount of business brought before it for consideration was dispatched in prompt and systematic order. The secretary's report indicated a gratifying increase in the number of paying members, and the report of the treasurer showed the amount of funds now on hand to be more than double what it was one year ago.

Mr. May made a report for the sub-committee which was appointed a year ago to arrange for the incorporation of the society in whichever State the most favorable charter could be procured. After discussion it was decided that the best plan would be to apply for a National charter, and in furtherance of this object Mr. W. R. Smith, of Washington, was added to the committee with instructions to report at the August meeting.

A communication from John Fottler, Jr., Secretary of the American Seed Trade Association, was read, and resulted in the adoption of the following resolution:

Resolved, That we concur in the desire expressed by the resolution of the American Seed Trade Association for united action in the matter of exaggeration in catalogue illustrations, and recommend that consultation be had by our respective committees on that subject.

A communication was received from Prof. L. R. Taft, Agricultural College, Michigan, soliciting the co-operation of the Society of American Florists with the Michigan Horticultural Society and kindred institutions in an effort to obtain for floriculture adequate recognition and proper classification in the arrangement of plans for the horticultural department of the World's Fair at Chicago. After a thorough discussion a sub-committee was appointed to urge upon the Director-General the importance of this matter, and to express the indorsement by this society of Mr. J. D. Reynolds as the best man to be placed at the head of the Department of Horticulture.

The committee was constituted as follows: Messrs. J. C. Vaughan, Robert Craig, J. M. Jordan, W. A. Manda, W. R. Smith, W. Falconer, H. A. Siebrecht, John Burton, John N. May and E. G. Hill.

A permanent committee was also appointed to represent this society in arranging for an International Congress of Horticulturists, to be held in Chicago at the time of the World's Fair, as follows: E. G. Hill, W. F. Dreer, W. A. Manda, Jas. Dean, J. T. Temple, W. R. Smith, E. Asmus, H. H. Berger and W. H. Chadwick.

The "nomenclature" matter was then called up and the rule excluding from membership on that committee gentlemen engaged in the "catalogue trade" was rescinded and the committee was re-constructed as follows: Wm. Falconer, Glen Cove, N. Y., Chairman; J. D. Reynolds, Ed Lonsdale, R. Craig, Ernst Asmus, J. N. May, I. Forstermann, John Thorpe, E. G. Hill, Robert George, W. R. Smith, C. D. Ball, A. B. Scott. The committee was authorized to expend a sum not exceeding \$100 during the coming year.

A number of communications were read in reference to the advisability of making awards to displays of heating apparatus at the annual trade exhibition of the society, and after a lengthy discussion it was voted that in future all committees on heating apparatus be instructed to simply draw attention to apparent points of superiority in such exhibits, and that no certificates of merit or other premiums be awarded in this department.

It was further decided in relation to the trade exhibition that in addition to the enforcement of the rule adopted at the last convention directing that the exhibition be closed during the time the convention is in session, that no exhibits of plants or other goods be allowed in the convention hall. Messrs. Long, Welch, Burton, Vaughan and Stewart were appointed a committee to arrange a set of rules governing the arrangement of trade exhibits, space allotments, also rules for the guidance of committees on awards and other matters connected therewith.

and to make report on same at the next meeting of the board.

It was decided that the usual charge of 25 cents per square foot for floor and wall space be charged to all exhibitors; also that all proceeds from this source be left in the hands of the local club, who are also to pay all expenses connected with the same.

Arrangements have been made with the proper authorities that all goods from the United States intended for exhibition purposes will be admitted without payment of duty. The Gardeners and Florists' Club, of Toronto, having announced its intention to arrange for a horticultural exhibition to be held at the time of the S. A. F. meeting, next August, it was voted that the sum of \$100 be appropriated for premiums to be offered in the name of the national society at that time, for such class of exhibits as may be designated by the local club.

The matter of providing some means for the easy recognition of members at the annual meetings, together with the instructions voted by the S. A. F. at Buffalo indorsing the "numbered badge" plan, was taken up, and after a thorough discussion, it was unanimously voted that the thanks of the society are due to the committee who had this matter in charge for their earnest efforts to provide a suitable plan, but that the executive committee finds that the plan in its present shape is impracticable and inadvisable.

A committee was appointed to present to the society at its next meeting some definite plan for the establishment of a life membership.

After a tour of inspection of the various auditoriums and exhibition halls in the city, the Horticultural Pavilion, corner of Girard, Sherbourne and Carleton streets, Toronto, was selected as the place of the next meeting, and the Queen's Hotel as the headquarters of the S. A. F. during the time of the meeting.

The following list of subjects for essays was adopted:

- Review of new plants.
- Future of horticulture in America.
- Credits.
- Store trade.
- Florist business in the South.
- Sub-tropical bedding.
- Winter flowering plants suitable for decorations.
- Begonias.
- Aquatic plants.

A large number of subjects for the question box were handed in and more are expected.

Socially the visit of the Executive Committee was an exceedingly pleasant one. The Toronto brethren were most kind and attentive throughout. In the afternoon the visitors were given a sleigh-ride, during which some of the leading greenhouses were visited and the many attractions of the city, not the least of which was the famous "Curling Rink," were inspected.

In the evening a banquet was tendered to the Executive Committee by the Gardeners and Florists' Club of Toronto at the Queen's Hotel. Vice-President Chambers presided, and there were present about one hundred gentlemen, including a number of the heads of departments and members of the Board of Aldermen of the city. The speeches were of a high order, the floral decorations of the table were simply superb, and the whole affair most spontaneously carried out.

WM. J. STEWART, Secretary.

Carnation Lamborn; Is It Profitable?

In your issue of the 8th inst. there is a communication from Mr. H. E. Chitty entitled "Carnation Lamborn." I have no desire or wish to get into a controversy with Mr. Chitty, yet I do not think he will object to a fair criticism of his article, or a comparison of his results with "Lamborn" with other varieties grown by other florists. It has been truly said that "fair and just criticism helps us to greater efforts."

He says "that from 3,500 plants of Lamborn he has gathered from October 1 to December 26, 10,000 flowers, which have netted him \$50 per thousand." To the ordinary grower about Boston this statement is remarkable in two particulars. First, the large price obtained for the flowers, which makes me feel as if either my flowers were very inferior or the Boston market a very poor one. Second, that it would be unprofitable to grow a variety which for three months had not averaged one flower per plant per month.

My observation is that where "Lamborn" does well, it gives good flowers and better results, as to numbers, than Mr. Chitty shows.

I have only one variety of which I have kept an accurate record, there being 700 plants. The cuttings were struck from February 10 to April 15, 1890, and planted out in field the last of May, lifted from open ground the middle of September. When lifted the plants were very well budded, but nearly all the buds died from the effects of transplanting. I cut the first flower October 13, and to November 30 cut 3,319 flowers; from December 1 to 31 I cut 3,059 flowers, making 6,376 flowers in two months and eighteen days, or an average of nine flowers to each plant. From January 1 to January 11 I cut 1,009 flowers, and from indications I expect better results for the next four months. I have also taken off 12,200 cuttings since October 15.

While the flowers were very fine, and found a ready sale at wholesale, they have barely averaged 2½ cents apiece, thereby netting 22½ cents per plant to January 1. If they had produced flowers in the same number as Mr. Chitty's Lamborns they would have netted 7½ cents per plant at the price I obtained, making a difference in favor of my plants of 15 cents each, or \$105 for the 700 plants, and \$525 for 3,500 plants at my prices and \$1,050 at Mr. Chitty's prices, no small item to one who grows flowers to keep the "wolf from the door."

I do not consider it a fair test of the merits of any variety to judge it by the results obtained the first three months under glass, but by the entire season, from October 1 to the following July.

R. T. LOMBARD.

Wayland, Mass., Jan. 12, 1890.

In the AM. FLORIST of Jan. 8, 1891, H. E. Chitty, of Paterson, N. J., gave us an idea of the profits he makes on the Lamborn carnation. In his article he states that from October 1 to December 26 he has gathered 10,000 flowers from 3,500 plants, and, best of all, he states that

after charging the 10,000 flowers with every item of expense that it is possible to think of they give him a net profit of \$50 per 1,000, which is very encouraging, indeed, and I can only say here, it is to be regretted that we are not all so located as to be able to dispose of our cut flowers at retail prices. Mr. Chitty says further, that no person to look at the beds would suppose for one moment that any considerable number of flowers had ever been gathered, and that the mass of buds in the several stages of development remain if anything more numerous than a month or two ago, which also is very encouraging and especially so when he can sell them at prices ranging from 50 cents per dozen to 10 cents apiece.

But in my estimation there is nothing extraordinary about cutting 10,000 flowers from 3,500 plants in three months; it is not even an average of three flowers to the plant, and in my opinion any carnation plant that could not bring three flowers in that length of time and look as good as ever would not be worth handling, especially so where many of the flowers can be used short-stemmed and but few buds need be sacrificed in order to pick long stems.

Mr. Chitty also states that he sent 1,500 blooms to New York, for which the consignees allowed him \$2 per hundred, less the necessary expenses. Now those are exactly the ones that the most of us would like to hear from, and since he has been kind enough to tell us what profits he has made by using his flowers in his own store, I, for one, would like to ask him to be so kind as to tell us also, through the columns of the FLORIST, what his profits would be if he were obliged to sell all his flowers through a commission dealer at \$2 per hundred for long stems, and out of that to pay 15% commission and also express charges. It would also be interesting to know how long it would take him to accumulate half the actual cost of his new iron greenhouse at that rate; and also how it would affect his bank account. I can dispose of a few flowers now and then at retail prices myself, and I have, long ago, come to the conclusion that it would be an easy matter to make any of the leading varieties of carnations, or in fact almost anything else, pay large profits under those conditions, but to make large profits at the present wholesale prices is a horse of another color, and any light that Mr. Chitty, or any one else, can throw on that side of the question will doubtless be welcomed by many readers of the FLORIST.

M. SCHMIDT, JR.

Fanwood, N. J., Jan. 14.

In Mr. Chitty's article in the FLORIST of January 8 he reports the sale of 10,000 flowers from 3,500 Lamborn carnation plants since October 1. He does not say just at what date this statement is made, but I suppose we may consider it to come up to about January 1, which would make less than one flower per month from each plant. Is this a large yield?

I am not accustomed to growing carnations, but would have expected much more, and it does not look very encouraging for the grower who expects to take his chance in the wholesale market.

Hammonton, N. J. WM. F. BASSETT.

In the FLORIST for January 8 I see that Mr. Chitty gives his reasons why he planted Lamborn in place of Himze's White carnations. I think his reasons are good, but must say I think his pickings quite small. I have about 1,100

HOUSE OF MIGNONETTE AT MR. JOHN N. MAY'S.

Silver Spray carnations, and from this 1,100 I have shipped (so my books say) 8,575 good carnations, short and long, and but very few short ones too. And more than that all my carnation plants are looking fine and full of buds. Do you not think this is a very good showing for the first year in this business.

Akron, O. J. C. HOAG.

New Carnations.

As the saying goes, "the woods are full of them," and all are highly recommended by their introducers, and all "superior to any raised up to this time." How is the general grower to know this, as very few of them have been exhibited and received a certificate of merit from those competent to judge, with the exception of Lizzie McGowan, which has been shown in many places and highly praised. Having seen it growing at John McGowan's, the raiser of it, also at H. E. Chitty's, I would say if others can grow it as well, I think no one will regret investing in it.

Mr. Chitty thinks very much of Lamborn, and according to his experience it has done more than well, but I think this has not been the experience with many others, or at least many others have not had so favorable an experience. I was expecting to purchase some plants of it the first year it came out, but neglected to do so. When the next winter came around I saw it growing at two places, and from what I saw of it I did not want it. The blossoms were of good size and white, but they had such a crinkled, wilted appearance that it spoiled it for me. This may

have been due to the manner of growing it, unsuitable soil or temperature, or both. Still, under the same conditions other varieties were doing nicely.

Hinze's White, Mr. Chitty has thrown out, it not giving him satisfaction as it is too much of a cropper. Still I saw a bed of it at Bird's, of Newark, which to my mind was very much finer than Lamborn at Chitty's, and I saw them both on the same day. But these Hinze's White were much the finest I ever saw. This shows that one grower can do much better with some varieties than other equally good growers. I think Hinze's White, to do well, needs plenty of light and a night temperature of 55° to 60° in order to bring out the size and a pure white color. I often see them growing in a cool house, and under that condition the blossoms are much smaller, and the color quite on the buff. The finest I ever grew was with a night temperature of from 55° to 60°. This gave me extra fine large white flowers.

In looking over the AMERICAN FLORIST we find a large number of new ones advertised. I hope they will all prove good and desirable varieties. It will take at least one year to tell. I sometimes think pet plants of our own raising are like pet trotting horses. We think they have all the strong points for speed and must win sure. We start them in the race with all the confidence in the world that they will be the winner, but owing to the track being composed of the wrong kind of soil, or the temperature too high or too low, for our pet, the old timer goes right along and comes in ahead of all the new-comers,

some of which drop out almost before they get started. Some last until they reach the home-stretch, and that is the last seen of them. I hope our new carnations will do better.

Will some one who has had experience tell us through the FLORIST how they have succeeded with Mrs. Fisher? Has it come up to their expectations? Are the flowers good and is it a free bloomer?

Beauty of Oxford is recommended as being better than Grace Wilder. Who knows anything about it?

Hudson, N. Y.

E. HOLLEY.

House of Mignonette.

We present herewith a view of a house of mignonette as seen at the establishment of Mr. John N. May, Summit, N. J. The house is eleven feet wide with a two foot walk. As shown, the plants are growing in solid beds, raised above the level of the walk about eighteen inches.

In our issue for September 15, 1889, (No. 99) on page 60, we printed an article by Mr. May giving in detail his method of growing the mignonette.

Woolly Aphis and Scale.

In response to a query as to the best remedy for woolly aphids on camellias and scale on ferns, Mr. W. H. Taplin has, at our request, prepared the following:

"Probably the best remedy to apply to the camellias would be a solution of Fir Tree Oil, or the kerosene emulsion, either being good for this purpose.

"These remedies should, however, be cautiously applied if there is much young growth on the plants.

"Scale on ferns is difficult to treat with an insecticide on account of the tenderness of the foliage, and the most satisfactory method would be to cut off the worst fronds and then remove the scale from the remainder with a sponge and weak solution of whale-oil soap."

Rose Waban.

For nearly a year this new rose has been a subject of much interest to American rose growers and the "red *Mermet*" as it has been known has had much quiet advertising through those who noticed it at the Waban Conservatories at Natick, Mass., where it sported and has been grown under the care of Mr. Montgomery. For six months or more since its fixed color has been established our best judges of roses who have carefully examined it have been satisfied of its great value; reasoning that a rose identical with that great forcing rose *C. Mermet* and fully two shades deeper, securing blooms of extra fine color even in cloudy weather, must prove of great value as insuring every grower finely colored stock under all circumstances. Messrs. E. M. Wood & Co., the introducers, claim their sales of the cut flowers in the Boston market confirm these opinions of its great value and indicate that shrewd rose growers will profit by substituting it for *Mermet* even if at much higher prices than plants will be sold for. It is identical with *Catherine Mermet* in every characteristic except that in color, it is two shades deeper, being a bright pink and sustaining the same relation to the parent as *Duchess of Albany* does to *La France*. Silver medal of Mass. and Penna. Hort. Societies has been awarded to it. We take pleasure in presenting to our readers a very handsome colored plate as a supplement to this issue.

Phaius Humblotii.

This is undoubtedly one of the finest of the dwarf-growing *Phaius*. Some nine years ago a few plants were brought to Europe by M. Leon Humblot from Madagascar, in whose honor the plant was afterward named. At that time very high figures were realized for them. After a period of nearly seven years an importation was received by F. Sander & Co. with very successful results, and it is now to be found in every prominent orchid collection. The illustration here given will convey some idea of its free flowering habit. It is both dwarf and compact, and fortunately is an easy grower; the flower spikes attain a length of eighteen inches to two feet, and bear from twelve to sixteen large, well-formed blossoms. They measure individually two to two and one-half inches across; each sepal and petal is broad and suffused with a deep rose color; the lip is also broad and furnished on each side with a reddish crimson, having a very prominent golden yellow crest.

During the early summer months they enjoy an abundance of air which is then their period of active growth, but direct sunlight must be carefully avoided. When the growths are completed water should be sparingly given, though at no time should they become quite dry. A compost of rich, fibrous loam and fine peat in equal proportions with an addition of coarse sand suits it admirably.

Summit, N. J.

A. DIMMOCK.

Floriculture in the South.

Accepting your invitation to use the columns of the *FLORIST* for the benefit of southern readers, I will proceed to make a few general replies to your correspondent's queries from an experience gained within the past six years in the commercial business in Tennessee.

With regard to the size of the houses it is difficult to go into detail in the absence of more particulars regarding the special line of business to be carried on. The class of plants to be grown, the extent of the demand to be supplied and the amount of capital to be invested, all are potent factors in the determination of the size of the houses to be built, in the south as well as in the north.

In a general way large houses are to be preferred for the south, as they keep cooler in summer, and this is of primary importance here, as with our mild winters the maintenance of a nice growing temperature from November to March is a very easy matter. Small houses where a man's head when standing in the south is within twelve or fourteen inches of the glass is had enough in the north, but quite unbearable in the south through the summer months, and the erection of all such small structures should be discouraged.

There are no conditions that I know of that would render any changes in the width of the houses or the pitch of the roof different from those recommended for the north. The taste and convenience of the builder should best determine these points.

In ventilation it might be well to provide more than is usually necessary for houses further north, though by no means do I regard it as essential to success. On the whole our summers are but little warmer than in the north, the only difference is we get the heat earlier in the spring and it stays with us until late in the fall. I have felt the heat as much in Connecticut as I have in Tennessee. I have also felt the cold as acutely here with 17° of frost as I have in the north with that many degrees below zero. Within the past few years we have erected several houses here, all span roofs with stationary sash bars and the ventilating sash only in the same proportion as is allotted for houses further north, and they have answered every purpose for which they are required. One point for the south is to get good end ventilation that will admit of a good current of air to pass through the house during a few of the warmest of our summer months. A good size double door on one end and a large window or sliding sash on the other will accomplish this. With this addition to the ordinary top ventilation a house of this kind with a good coat of whitewash on is about as cool a place as we have in summer here. This end ventilation is to get good end ventilation during the period of our warmest weather, as the draught caused by it would be injurious to all tender growths during the spring and fall months.

In most establishments in the south there are generally to be found a house or two devoted to *Tea* and *Noisette* roses planted in solid beds that remain for years undisturbed. Where such houses as these are desired a roof consisting of sash that can be entirely removed in the summer is a decided advantage, either north or south, as it reduces to a minimum the care of them through the summer months, and the plants keep clean and are consequently more vigorous and healthy. When cut back in the early fall,

the sash put on and heat applied a fair crop of flowers may be expected. With this exception I see no advantage in a roof that can be entirely removed. Moreover, they cost more than a house built of immovable sash bars. To be movable the tops would have to be sash and of sufficient durability to stand the continual wear and tear of moving on and off for no particularly good that I know of. Directly the top is taken off a house it ceases to be a house, and no operation can be performed there, or the cultivation of any plants carried on that can not just as well be done in the open ground. Potted plants of any kind will not thrive there for want of shade, and young roses on raised benches in shallow soil would be apt to suffer through July and August if exposed to the drying influences of the sun and wind. Immovable roofs except in the case before mentioned are to be preferred, and like the Irishman's overcoat that kept out the heat in summer as well as the cold in winter, the greenhouse roofs in the south can be used to a similar advantage. A house well ventilated, properly shaded with abundant facilities for watering and sprinkling at hand so that the humidity of the atmosphere can at all times be preserved, is more conducive to the growth of two thirds of a commercial florist's stock even in the south than to have the top removed and no protection afforded the plants from the sun and wind. The rival systems of heating—hot water versus steam—have their advocates and opponents in the south as well as in the north, though the hot water system is the one generally adopted. South of this point I know of only one establishment, where a steam boiler is in successful operation. For all small places a hot water boiler is preferable. Four-inch pipe is the best size to use, placed underneath the benches immediately inside the house and high enough from the ground to admit of a free circulation of air all around them. Less pipes will be required in the south than in the north, although it is always more economical to have a little more pipe than necessary than too little. All gardeners who have ever had anything to do with stoking know that with abundance of pipes and consequently a large heating surface, a smaller fire will yield as much heat as a larger one where but a few pipes and but little heating surface is supplied in the houses. Any of the hot water concerns advertising in the *FLORIST* will upon receiving the style and dimensions of the houses to be heated, the temperature desired and the average outdoor temperature of your locality in winter, give the necessary amount of pipes to be used.

The propagation and all the indoor culture of the carnation can be done just as well in the south as in the north. The only difference I find is, when planted out in summer larger and more vigorous plants can be raised in the north than we can raise in this climate. A proper selection, however, of a position to grow the plants through the summer will to some extent mitigate this evil. A low lying piece of ground should be selected that retains the moisture as much as possible through the summer, and should be cultivated to a depth of at least sixteen inches, eighteen would be better. If the ground is rolling secure a slope that faces either north or east and if facilities for irrigation are at hand so much the better. Continual working them will be necessary, as the clay soil in this section bakes extremely hard after each successive rain. With such provisions as these, carnations

GROUP OF PHAIUS HUMBLOTII

good enough for all purposes can be grown in the south, and only in the case when new varieties or an increase of stock is desired, is it necessary to send north for any.

The cultivation of the violet in the south is uphill work for all who pursue the same line of culture as is carried on in the north, the long dry summers in all cases being detrimental to the growth of young plants in the open air through the summer months. There is, however, a few favored locations in the south known to the writer where violet culture is carried on with some profit by one or two firms making a specialty of them. The southern summer is against the growth of violets, but on the contrary the southern winter proves most favorable to their bloom, development and productiveness, as is attested by the number of amateurs and lady florists all through Mississippi and Alabama that raise them in quantities for the northern markets. The secret of this success is, their beds remain undisturbed from year to year, and where once well established in this way they stand the summers better than young and newly bedded plants, such as are annually raised by northern florists. The violets raised in the south in this way in these permanent beds are small and inferior compared with those grown north by a more thorough system of cultivation. The inexpensive way with which these flowers are produced and the quantity in which they are raised is the

only offset to the other drawbacks against a higher and better style of cultivation. With violets, however, like carnations, fair plants may be raised in the south by a judicious selection of position and soil. A good cool northern exposure is the place for them in summer, and if grown in frames shading must be resorted to. We raise some fair plants here by planting early in spring, about four rows, on the north side of a close plank fence.

The question of rose growing in the south is rather a knotty one to tackle, and he who would be spared from the anathemas of many growers throughout the south would let it alone. That roses can not be propagated as freely in the south as in the north is well known to all southern florists, although we have found some who lacked the candor to make this admission. So far as their propagation in the greenhouses, propagation pits or frames in the winter months are concerned, northern florists have no advantage of us. The season, however, with which this propagation can be performed is short compared with the north, which detracts from the success of these operations here.

In the more southern states the propagation of hybrid perpetuals and other roses in the open ground through the winter months is attended with much success as is known to most of the readers of the *FLORIST*. The system of summer propagation, so successful with northern

growers, is attended with but little success in the southern states. Louisville, Ky., being about the most southern point where it is carried on with any degree of success, and as you journey southward this system is carried on only with varying success, the further south you go the worse the conditions are.

While the propagation of the rose in the south is not as successful as many would wish, all the other details of its culture can be mastered just as thoroughly in Tennessee or Georgia as in New Jersey or Illinois, and the forcing of roses for bloom in winter can be carried on in the south just as successfully and with considerably less expense than can be done north. Our winters are usually bright, with an abundance of sunshine, fire heat would have to be applied only at night, except in extreme weather which is happily but of short duration. In view of this it is rather surprising to think that more than two thirds of all the cut roses used in all the large southern cities are all brought on from the wholesale growers of the north and east, Louisville, Ky., and the cities in the extreme south where outdoor roses are frequently had in winter, probably excepted. That an opening exists in some of our southern cities with ample railroad facilities for a large rose growing establishment that could supply rose buds by wholesale to supply the retail trade in those cities, anybody that knows the trade in the south best will not deny. Much trade also might be

done with the northern cities in this way, as with cheap land, cheap fuel, cheap labor, a genial climate and a generous soil, competition from all sources could be profitably met. I hope soon that some of our southern capitalists will become aware of this fact, and this branch of the florists' industry may be soon added to the numerous other rapidly growing enterprises that are daily springing up in every section of the south.

With regard to the preparation of roses for winter blooming in the south, there is no special preparation necessary other than is usually practiced by northern florists. Clean, healthy young plants set on raised benches, in shallow soil, produce the best results both north and south. July is a good month to plant for the south. Not less than strong 3-inch pot plants should be used. If planted sooner than July 2½-inch pot plants, provided they are well established and thrifty, will do so. Keep growing vigorously from the outset, much through July and August. After September 1st remove all shade and give all sun possible. Pinch off all buds until about three or four weeks before bloom is required. Apply fire heat at night as soon as the cool nights begin. Syringe always on bright days and when much firing is done to keep the plants clean and maintain an equable growing temperature. Feed the plants with liquid manure when vigorous growth is attained, and top dress by degrees as the plants require it. *Perles*, *Mermets*, *Brides* and *Niphetos* are most generally grown south and are to be commended. *Gontiers*, *Bennets*, *Beauties*, *Woottons* and other dark roses are in but little demand in the south, the light colors being always preferable. Talking with a wholesale grower in the north last summer, he asked "Why is it that we can never sell you southern florists any of our dark roses? The southern demand is invariably for white or yellow and occasionally pink."

The enquiry as to the advisability of planting roses in the open ground and covering in fall with a specially prepared sectional greenhouse; to this I would say if the object should be to procure cut blooms through the winter months I am confident such a course would be folly. Cut blooms could not be raised in this way in sufficient quantities to anywhere near compensate for the labor involved. If houses are to be provided at all, better go to the additional expense of fitting them up properly with benching, heating apparatus and other necessary appliances, and if in this way they can not be made to pay for the capital invested, they certainly would not in the other way suggested.

JAS. MORTON.

Clarksville, Tenn.

A Criticism on Gladioli.

Some say there has been little improvement in the new gladioli of late years. Looking over the entire list we can see more good gladioli that have been introduced the past fifteen years than all the previous years combined can show. There were many good varieties prior to fifteen years ago, and I don't think one out of twelve of the novelties are really great, at least one out of twelve will take every really fine variety introduced. It is a hard matter to get a variety evenly balanced.

I will criticize some of the sorts which I consider the finest, not including those of the most recent date. As all have favorite colors I do not propose to confine myself to particular colors I fancy, but to varie-

ties of good habit, fine blowers and fresh, bright colors.

Abricote, good in every way except that it is a poor grower and slow to propagate.

Africaine, good, making no pretensions to very large spike or flowers. It has a deep, distinct color; a good grower.

Angele, good habit, medium flower and spike, never extra fine but always good.

Archduchess Marie Christine, good flowers but flimsy. We have too many of what are called variegated or "whites flamed with rosy carmine," etc. Many varieties of this color run so close it is hard to tell them apart, and a strange point is the flowers of many are flimsy.

Astree, moderate-sized, quite striking in color, but small spike. Poor grower.

Aurora, good habit, spike and flowers medium, the latter very good shape. In this variety the flowers envelop the spike in many cases. This style, if you can get it good enough and constant enough, in my opinion, is the most perfect arrangement of flowers on the spike that we can get, although the popular idea is to have the two rows of flowers face one way. *Meyerbeer* is the best example of this that I know of.

Baroness Burdette Counts, good, sometimes very large, petals always rather thin. Sports from very good to quite poor.

Bicolore, strong grower, rather coarse. *Cameleon*, distinct color, rather good habit.

Conquette, good, pleasant color, no bad habits.

Cosair, very effective color. Flower and spike rather small. Slow propagator.

Diamond, on the light variegated order, rather good flowers but flimsy.

Eugene Scribe, one of the old cheap ones. Habit good. Good flowers; very firm. Color not very brilliant and rather coarse.

Flamingo, habit good, fine scarlet. By the way, fine scarlets are scarce.

Grand Rouge, this has a grand habit on the heroic order. Flowers face one way. Frequently all the flowers, from base to tip, are out in good condition at once. Has a bluish tinge on the lower petal. This is a fine gladioli, though a little coarse perhaps.

Hesperide, with some a great favorite. It is a pretty gladioli, but has two faults, the flowers are flimsy and the spike is almost always crooked, having an offset at the bottom of the lower flowers.

John Bull, an old one. Sometimes coming quite good, other times coming hard. This is largely used for light colors.

La Candeur. The bulb is nearly always small and bad looking. A weak grower and loose spike. Flowers rather thin, but many times coming very white and quite large.

La Fiancee. This variety has been very difficult to get true. Good habit, light color, a distinct bluish violet line in the lower petals.

Lander has a distinct color, rather open spike, a little coarse.

De Lesscops. Good of its class.

Vesuve. A good scarlet.

Madame Auber. A good one.

Madame Desportes. A good white, but one of the hardest of the entire list to increase.

Madame De Vetry. If it had not been catalogued so extensively I would not have mentioned it. Light color, spike often crooked, not number one.

Mademoiselle Marie Mies. Large flower and good habit.

Marie Berger. Fair habit, medium flower. One of the most distinct in its

way. Flowers have a satin gloss seldom seen on any others.

Marie Dumortier. I mention this on account of its peculiarity. I think that it takes a larger bulb of this variety to bloom than any I know of.

Meyerbeer. One of the oldest and very good. The habit of this is most excellent, illustrating the type of flowers facing one way. It will have as many flowers out at one time and in good condition as any variety I know of.

Nereide. A most lovely color and fine habit. Good flowers, but poor grower.

Norma. Good habit. Large flower and good shape. One of the best French whites, but at times sports badly.

Ondine. A good variety, distinct whip foliage.

Phœbus. One of the best of the type of the scarlets with white throat. On the *Le Poussin* order, only much better.

Reine Victoria. Occasionally comes showy. Usually the flower is hooded and spike crooked.

Skiespeak. Good habit, good grower. In many cases the flowers envelop the spike. Occasionally single flowers come beautifully tulip-shaped. At times very good, at other times very bad.

Stella. Of moderate merit. The bulb generally looks poor and spotted. This peculiarity of the bulb is the only reason I mention this sort.

Talma. The French evidently let out two sorts for this variety, as we received two kinds among the bulbs we got from France, each one answering nearly the description.

Theresa De Vilmorin. This cost \$6 the first year it was introduced. Fair habit. Of considerable merit.

Van Spandonck. Small flower and rather poor habit. Intensely red.

Victor Jacqueminot. Good habit, spike medium. Flowers rather large and of fine shape, tending to envelop the spike. Sometimes individual flowers of this sort are almost perfect. Poor grower.

Ceres. We mention this on account of the bulb growing so small. It is very hard to get large bulbs of this sort, but it blooms very freely from very small ones.

The test points we look for a gladioli to conform to to be called first-class are:

The spike must be long and straight, the flowers good sized and nearly tulip-shaped, or, in other words, the petals to be nearly one size, closely laid together and the petals, laid on the spike, either to present a solid appearance on one side, or, as we have described before, to envelop the spike.

The substance should be good and firm. The flowers should not rapidly become smaller toward the top. The nearer you can have the flowers one size from bottom to top of the spike the better.

A number of flowers should be in perfection at one time, or, in other words, the entire spike should be in full bloom before the lower flowers are passed. In many kinds, and quite good ones, too, two or four under flowers open, and before many others open these have already faded. This spike can never be made to present a fine appearance, no matter how fine the individual flowers are. *Grand Rouge*, *Meyerbeer*, and several others, represent the style of the entire spike in good condition at one time.

Brenchleyensis opens too quickly from bottom to top, and its period of perfection is therefore much shorter. At certain time of the year I have seen *Brenchleyensis* open from bottom to top in twenty-four hours.

Madame Monmeret, *Agatha*, *Jupiter* and *Reine Victoria* are good illustrations of

CAMPANULA PERSICIFOLIA ALBA.

[REPRODUCED FROM LONDON GARDEN]

spikes that open a few flowers at once and fade as soon as a few more are open.

I should like to know how my ideas conform with those of the great gladioli experts of the country. OCCASIONAL.

Campanulas.

Among the campanulas or bell flowers we have many beautiful and useful garden plants; some, as the harebell (*C. rotundifolia*), are perennial, others, as the Canterbury bell (*C. medium*), are biennial, and a good many, as *C. macrostyla* and *C. Loreyi*, are annual.

Although the annual species are pretty enough in their way as open air garden plants, they are of little avail to the commercial florist.

Among biennials a little species called Wanneri is a gem, it has such large showy flowers, and another named Sibirica looks like a dwarfed Canterbury bell and is quite interesting. What is generally known as the chimney bell flower (*C. pyramidalis*) although a perennial, always does best with when treated as a biennial. Besides the blue there is also a white variety; when in bloom they form long slender or branched wands three to six feet high. But the Canterbury bells

and their cup-and-saucer (calycanthema) section are the glory of the whole campanula race; the pity is, however, they are barely quite hardy. And as pot plants forced early for conservatory decoration or for cut flowers, no other bell flowers are as good.

In the way of perennials not only have we a large variety of species but a great assortment in the way of size and manner of growth. The little *C. pulla*, *C. pusilla* and *C. turbinata* make lovely little mossy tufts of close-set green leaves thickly studded over with blue flowers. Our common harebell (*C. rotundifolia*) and its white variety and the Allegheny *C. divaricata* represent an elegant slender growing section, and *C. fragilis* droops in a manner to make it a pretty little basket or bracket plant if grown indoors, or better still to spread over the edge of a stone in a rockery; indeed all the above perennial kinds are particularly adapted for rockwork.

The bolder perennials can be grown to rough it in the open field or border. Best among them all is the peach-leaved bell-flowered (*C. persicifolia*) and its white-flowered variety (the subject of the beautiful illustration) and its double white form called *coronata*. They are ever-

green, of the easiest possible cultivation and in bloom in early summer, lasting in flower for a long time. Other vigorous kinds worthy of cultivation are *punctata*, *nobilis*, *lactiflora*, *grandis*, *barbata*, *Van Houttei* and *macrantha*. Of course everybody knows the Carpathian bell flower (*C. Carpathica*), blue and white, and finds a place for it in his garden.

There are white flowering forms of many of the blue-flowered species, and oftentimes the white one is the most desirable.

All the species are easily raised from seed, but as the varieties often come irregular both as to form and color, it is better to propagate fine forms and double-flowered sorts by division.

Now while all of these campanulas are useful garden plants we can not depend much upon them for cut flowers. They yield blossoms abundantly enough, and the florist who does a local trade can use many of their white flowers to good advantage, especially of the peach-leaved bell flower. But, apart from this kind and Canterbury bells, I don't think it would pay the florist to grow campanulas for cut flowers. No matter how charming we ourselves may think them, try them on the market if you wish to find out how the general public appreciate them. And with private families, while for variety's sake they may submit now and again to having a vase filled with bold campanulas, for dinner table or other nice decorations campanulas find no place. And we can not now do as our grandmothers used to make up bunches of mixed posies, there must be enough of one kind of flower for one dish, and that flower must have color, form and comeliness for this end. W. F.

From Boston to Toronto.

The delegation from Boston to the executive committee meeting, accompanied by Treasurer Hunt and Mr. W. R. Smith, of Washington, visited Montreal on the outward trip and were the recipients of the most unbounded hospitality from the florists of that city. The opportunity to see Montreal in her winter dress was greatly enjoyed by all, and the unremitting attentions of the brethren there will never be forgotten by those who were so fortunate as to participate.

Returning home the Boston party, accompanied by Mr. Burton, were induced by Mr. Smith to come by way of Washington, a round-about route which they did not regret when they found the reception which had been arranged for them by their good friends Durfee, Smith, Hale and Evans.

After an inspection of the interesting collections at the Botanic Garden, a call at the extensive rose houses of C. Strauss & Co., and a visit to various points of interest the visitors were escorted to the Capitol, where, in one of the private dining-rooms, had been prepared a sumptuous banquet, and at which they were honored by the company of a number of prominent men in Congress, including Senators Blackburn of Kentucky, Cullom of Illinois and others. A huge mound of roses graced the table and the room was finely decorated with plants. The after dinner exercises were of such a character as to be remembered by the guests as one of the most enjoyable occasions of their lives. W. J. S.

BUFFALO.—A number of the members of the Executive Committee of the S. A. F. made a short stop here while on their way home and were entertained by a dinner at the Mansion House.

Leaves of Advice From a Limb of the Law.

(For Young Florists.)

XXIV.

ABOUT CHATTEL MORTGAGES.

Getting so rich are you that you have become a money lender? Well, I'll take your word for it that, you let your business friend have the money as a personal favor and that although you wanted to regard it as a "debt of honor," whatever that is, yet he insisted upon giving a chattel mortgage on his stock in trade.

Now you have had a row and are ready to foreclose, but he insists that in selling him out you can't take his movable sash from his hot houses nor even his forcing frames.

Of course a chattel mortgage can't rest upon real estate, and when I say real estate I include all building resting upon foundations, all trees, shrubs and plants growing in the soil, and belonging to the place as distinguished from the flowers, seed, plants, nursery products, etc., which go to make up a florist's stock in trade. All these may be enumerated in a chattel mortgage and be sold under the foreclosure.

Now, in my opinion, you may sell his forcing frames, but may not sell the movable sash of his hot houses unless perhaps there be a double set, and even then I'm inclined to think they belong to the real property just as much as the double sash for the cellar windows of the house belong to your residence.

You know in the olden times the common law of England went so far as to hold that a thief couldn't be arrested for stealing growing turnips or cabbages, as they were real estate, and a man couldn't steal land although he might trespass upon it. But they don't rule so strictly now.

A chattel mortgage upon a florist's establishment might legally rest upon a manure heap, for it is a valuable article to such a dealer, although it be simon pure dirt, that is real estate. But while such a mortgage might clean out a hot house of plants, vines, slips, cuttings, pump and hose, yet it couldn't disturb shelves fastened to the structure, or a heater set in the wall.

On the other hand a stove would go the way of all flesh, and so too would all ornamental things like a looking glass, cabinet hanging on the wall, safe, chest of drawers, ice box, unless built in the wall. And suppose your man being of an æsthetic turn of mind, had laid down ornamental tiles, these you could sell provided you restored the premises to their former condition. I'm assuming now that your man is the lessee of the premises and not the owner in fee. If the latter the tiles would not be removable under your chattel mortgage.

The law always looks to the interest of the person in attaching anything to the realty. For instance, if merely attached by screws, as a movable shelf against the wall, it is apparent that the person had in mind the removal of the shelf and a chattel mortgage would include it.

Now, we'll suppose that a chimney of the hot house smoked and your man as lessee set a rather expensive metal pipe and draught wheel on it, you could, I think, remove it under your mortgage, provided you restore the hot house to its first condition. No one has a right either as lessee or mortgagee to injure premises by removing any piece of personal property from the realty. The shelves of a dry goods store together with the count-

ers are sold under a chattel mortgage, but you must upon removing them take good care not to break the walls or damage door jamba or tear up the floor.

This subject of chattel mortgages is a peculiar one. You must follow the statute strictly and I would advise you never to attempt to file a chattel mortgage yourself or to renew one either. Employ an honest lawyer. Don't laugh. Century plants bloom at long intervals and you may find an honest lawyer by searching assiduously.

The law of chattel mortgages differs in every state and in most states they must be renewed within the last thirty days of the year for which they are drawn.

You ask me whether the clause in your chattel mortgage which provides that you are also to have a lien upon goods which your mortgagor may acquire after the making of the mortgage is good? I say no most emphatically. A chattel mortgage only covers goods and chattels in actual possession at the time of making and filing or recording of the instrument. Yes, it is usually customary to give a week's notice of foreclosure, but a mortgage drawn payable "on demand" may be foreclosed the instant you default in payment.

In some states you have "an equity of redemption" as it is termed, that is a right to buy back again, usually sixty days, but in other states the sale is absolute. Any one may give the usual notice and put out the red flag, but it is customary to employ a constable to perform this service.

Always be particular to take a note from your man and then let the chattel mortgage be collateral to that note. In case the sale doesn't discharge the note indorse the amount of the sale upon the back and bring suit for the balance due.

Always keep a copy of your chattel mortgage, whether you give or take. As you say, no mortgagor has a right to remove any of the goods or chattels without written permission, but if a dealer he may as your agent continue to sell and account to you for the proceeds. A business may be sold subject to a chattel mortgage resting upon it.

Never put a chattel mortgage upon your stock in trade unless it be for money absolutely advanced. I mean don't execute fictitious chattel mortgages to cover their ups. Deal openly and honestly. It pays in the long run.

UNCLE BLACKSTONE.

New York.

Business again at a standstill and the market glutted.

Armies of Greeks line the principal streets offering flowers for nigh nothing, the scene may be picturesque but one the trade in general dislikes.

The once famous balls and dinners have dwindled down to such an extent that they now pass unnoticed by the press. There have been no elaborate floral decorations this season as yet (none of the magnitude of past years). The Assembly Ball at the Madison Square Garden, though patronized by the "upper ten," was but a cheap affair. Butler used to have a \$500 decoration for this ball, but now they are content with "a few frims in the corners" and some greens in the hallway, which they procure from some remote florist at a total cost of some fifty dollars.

The famous Delmonico decorations have ceased; the ball room has been remodelled, the plastic art usurps the florist's. The decorations after the style of Louis XIV

with a touch of the renaissance look very beautiful, but alas, the proprietors will not allow the walls to be "disfigured" with flowers or plants, and at the recent Patriarch's Ball very few flowers were used, nothing but the hallway and "red" room being decorated. The decorations (though insignificant for such an occasion) were very artistically arranged by Merritt of the Klunder Co. Klunder at first received \$1,000 for each decoration for this ball, now it is done for \$100 to \$200.

The Charity Ball given at the Metropolitan Opera House, like the Assembly, used to be famous for novel decorations. Now, imagine the largest opera house in the states and the richest people in the state dancing there, with no decorations outside of \$75 worth of Christmas trees lined along the foyers! And so one could continue contrasting the beggarly affairs of to-day with the glories of the past. The Bradley Martens were probably the best plans in this country of the artists, their decorations were always the best procurable, magnificent in every degree, and it so followed that wherever they were invited out the host endeavored to have the house decorated with orchids and the table with Gloire de Paris roses. It is to be regretted that the Bradley Martins intend remaining in Europe for some time.

Nevertheless there have been a few exceptions. The Vanderbilt family have been stirring things a little. At the Webb and Twombly receptions Thorley did some of his beautiful work, ornate and hybrids being his principal materials, while Klunder decorated W. D. Sloane's dinner table with a center piece containing three thousand and fifty of the valley; on this table stood two gold candelabras valued at \$20,000. Cornelius Vanderbilt's dinner table was artistically decorated by Dards. This dining room is all that wealth can make it, and when the eight immense silver platters are filled with fine La France, as on this occasion the effect is charming.

The decorations for the W. H. Vanderbilt musicale were arranged by Hodgson, bulbous flowers being principally used. The decorations for the Mills Ball were supplied by Burnham & Co., roses and flowering plants forming the greater part. Stump decorated for the Baker and Crimmins receptions, and the Holland Society's dinner, 5,000 tulips being used for the latter. Old Dutch milk cans were placed on the tables and filled with tulips.

Alex McConnell and McConnell & Grimshaw were also busy, as was everybody last week, but this week is the reverse.

Charlie Anderson is cutting some fine Magnas at present, but Magnas are "not in it," while Beauties are to be had.

Laings and Luizets are scarce. Mr. James Fitzgerald, of Astoria, who is considered one of the best carnation growers, claims that Buttercup is the best yellow carnation grown.

A bouquet of Harrison carnations tied with French white ribbon is the proper thing just now for a young lady's ball bouquet.

Bidwell Bros. are shipping in Schaefer carnations 2½ inches in diameter—creeping on to Thorpe's standard.

Tidal Wave is a fine carnation, with a somewhat inconsistent name. Recalling M. Herr's article on bunching carnations, we find that carnations tied in bunches of fifty, with a little of their own foliage between, sell best; bunches of mixed carnations tied as per illustration would not suit the New York market.

News Notes.

Regarding the bunching of flowers in general, some steps should be taken by the Florists' Clubs to disseminate a knowledge of the proper way to tie and ship flowers. We often see carnations tied with a couple of yards of string twisted up to the very calyx, then again violets tied with something like sash cord. Violets should be bunched in fifties, with plenty of foliage round and tied half way up the stems with a thin purple twine. Smilax should never be trained on white strings, as every such string must be extricated (oftentimes with great difficulty) before the smilax can be used. Green colored grocer's twine is the proper thing to use to train smilax and asparagus on.

Jonquils are very beautiful just now. Cottage Maid, Due Van Thol and Yellow Prince tulips are coming in in quantity. Myosotis has come in and is being eagerly sought for.

The Florist Club held a meeting on Monday evening for the purpose of considering the advisability of giving an exhibition. It was decided to hold one in the Lenox Lyceum shortly after Easter.

A movement is said to be on foot among the young men of the principal stores to organize a social club in connection with the Florist Club for the purpose of giving a grand floral fête and ball this season.

Orchids may be seen in nearly all the principal stores at present, it seems to have been a remarkably good year for blooms. Cattleyas are very fine and plentiful. DeForest says he can cut from 500 to 800 blooms of C. Trianae almost any time just now. C. Percivalliana and Lælia anceps look very small among Trianae. Phalaenopsis amabilis and alba are very scarce, as very few care to bother much with it, it seldom pays. Odontoglossum crispum is easier to grow and nearly as good. Dendrobium Wardianum is fine to use in groups for decorations, to contrast with groups of Oncidium tigrinum, which are plentiful just now. Vandas hold their ground pretty well, but Lycaste Skinneri don't take at all, it is too easily damaged. Cypripediums are not so plentiful this year, yet there is little demand for what there is of them. Why don't orchid growers also grow A. Farleyense? JOHN YOUNG.

Actual PAID Subscribers, Florists and Advertisers, 5,000.

Count the florists of your acquaintance, count the best trade directories in the country and you will find that we have them all. If you want to reach them in your spring advertising you can do it with the FLORIST.

Is it worth your while to advertise in a trade paper which is of such immediate value that its readers pay for it, but also has such reference value that it is filed, kept and bound? We believe your card in the FLORIST, bound in its volumes with reading matter, adds to its value equally as much as the fact that the paper is worth buying and is only sent regularly when paid for.

These two facts combined must give us a permanent value of more than 50 per cent above ordinary waste basket literature.

Oil and Gas for Fuel.

Has any reader of the FLORIST had experience in substituting oil or water gas for coal? What was the cost of such change and cost of running as compared with coal?

EDWARD SWAYNE.

Kennett Square, Pa.

LITTLE ROCK, ARK.—Florist E. Coleman has failed. The liabilities are reported to be about \$8,000, and assets double that amount.

WELLSBORO, PA.—Christmas trade was fully up to last year. Could always sell more at that time if additional supply could be obtained at reasonable prices.

GALENA, ILL.—B. F. Vandervate, Jr., has bought the old greenhouse that was run by D. W. Scott, has started to rebuild and add to it and will be ready for spring trade.

AKRON, O.—Mrs. C. E. Hoag & Son began a florist's business here last summer with one greenhouse. They do not appear in the directory and should be added to the list.

FORT SCOTT, KANS.—The holiday trade was very good. Owing to the warm and pleasant weather for the two months preceding, flowers were abundant and in first class condition. Prices were not quite so good as a year ago yet the stock was all sold out. There was an increased demand for baskets.

DENVER, COLO.—The annual meeting of the Colorado State Bureau of Horticulture and Forestry was held in this city the 8th, 9th and 10th insts. The object of the bureau is the promotion of fruit and forest culture. A special feature of the meeting was a paper on nomenclature of fruit by T. T. Lyon, of South Haven, Michigan.

KANSAS CITY, MO.—N. S. Griffith, the Independence florist, has bought out the Baker Bros. here. Their plant is devoted mainly to the growing of cut flowers. Mr. Griffith will now devote his Walnut Hill greenhouses at Independence, Mo., entirely to the catalogue plant trade. In addition to his store at 1022 Main street he will also run the store occupied by Baker Bros. at 16 East Seventh street.

MILWAUKEE.—A party of local florists visited Mr. J. M. Dunlop's place at Wauwatosa on the 13th and spent a very pleasant afternoon curling. A number of the members of the Wisconsin Florists' and Gardeners' Club also visited Wauwatosa recently, calling upon Mr. G. W. Ringrose, who served refreshments to the party, after which they were taken in carriages to all the greenhouses in and around Wauwatosa.

CINCINNATI.—Mr. Geo. Corbett read a very able and interesting paper on watering at the meeting of the Cincinnati Florists' Society on the 10th inst. Officers of the society for the ensuing year were elected as follows: Geo. Corbett, president; B. P. Critchell, first vice-president; T. J. Jackson, second vice-president; R. W. Wintershaetter, treasurer; E. G. Gillett, secretary; T. W. Hardesty, assistant secretary; H. C. Corbett, R. J. Murphy and Wm. Bolia, executive committee.

PITTSBURG.—The organization of the Pittsburgh and Allegheny Florists' and Gardeners' Club was perfected at a meeting held on the 15th inst by the election of the following officers to serve the ensuing year: E. Reineman, president; Snowden Randolph, vice-president; Geo. Asterly, secretary; John Hartman, assistant and recording secretary; Fred Burki, treasurer. Among the trustees are John Herron, Gus Ludwig, John Bader and B. A. Heck. A committee was appointed to secure a permanent meeting place and to arrange other preliminary details.

OTTAWA, ONT.—At the last meeting of the Gardeners' and Florists' Club it was decided to extend an invitation to the Society of American Florists to visit this city on the occasion of the session at Toronto next August. Officers of the club for the ensuing year were elected as follows: President, Jas. Sorley; First Vice President, Jas. Hickey; Second Vice President, Thomas Elmit; Treasurer, J. Graham; Directors, Messrs. Nicholson, Williams, A. Hickey, McGee, Scrim and McCann. The election of a secretary was left to a later meeting. The club now has a membership of forty-six.

SAN FRANCISCO.—The third annual meeting of the California State Floral Society was held on the 9th inst. The following officers were elected for the ensuing year: President, E. J. Wickson; Vice-President, Mrs. L. O. Hodgkins; Secretary, Emory E. Smith; Treasurer, Mrs. M. S. Sperry; Directors, Timothy Hopkins, of Menlo Park, and Miss B. M. Pratt, of Fruitvale. The secretary's report showed that the society has held twenty-nine monthly meetings and has a membership of 150. The treasurer's report showed a balance of \$330 in the treasury. The theme for next meeting will be "What kind of roses make the best standards on their own roots, and which are best budded?" Also "Climbing plants aside from climbing roses." Miss C. G. Athern will read a paper on this subject.

NEWPORT, R. I.—The local papers have recently devoted some space to the airing of a difference which has arisen between Florist Arnd Brandt and the Newport Horticultural Society. It seems that Mr. Brandt did not at first intend to show any of his plants or flowers at the chrysanthemum show given by the society last November, but was finally persuaded to enter at the last moment by the executive committee, as the entries up to that time had been small and the indications were that the show would be thin. It was understood by Mr. Brandt that the time for entry had been extended and that he would be entitled to any premiums he might take, and the judges awarded him a goodly share of prizes, a list of which was given to the press for publication. But the premiums have never been paid and it is claimed by the society that Mr. Brandt was debarred from competition by entering after the time for same had expired. Mr. Brandt is now taking legal steps to secure the payment of his claim.

LARGE VIOLETS.—Florist J. L. Loose, Alexandria, Va., writes: tell the Nyack boys that if they want violets covering a silver dollar, we are picking them here by the thousand.

THE AMERICAN FLORIST

IS STRICTLY

A TRADE JOURNAL

DEVOTED TO THE BEST INTERESTS OF THE FLORIST'S BUSINESS

ISSUED WEEKLY. \$1.00 PER YEAR IN ADVANCE.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Monday to secure insertion in the issue for the following Thursday.

Address THE AMERICAN FLORIST CO., Chicago.

THE CHRYSANTHEMUM BEE-FLY.—Regarding the different views held by W. F. and himself as to the usefulness of this insect in effecting desirable crosses among chrysanthemums, Mr. Wm. J. Rowe, New Haven Conn., writes: "As respects me, I have but little hope of coming to a mutual agreement, if W. F. will send me his address I will present him with plants of a majority of the seventeen new sorts I mentioned in my communication, to be grown and tested by him, so that what the eye beholds the heart will have to believe."

MR. H. BAUER, of Baltimore, sends us a white carnation flower which measures three inches across, has very deeply fringed petals, is remarkably fragrant and unusually full. But the calyx is short and badly bursted. He asks us to give an opinion on the flower in these columns. The size, fragrance and substance are nearly all that could be asked for, but it would have to possess a much more perfect calyx and better stem to be considered a really first class flower.

AS WILL be noted there appears in this issue a number of communications in which the writers express surprise at the smallness of the cut of bloom from the Lamborn carnation as given by Mr. Chitty in a recent issue. We began to put them into type, but as they came thick and fast, all covering the same point, it seemed unnecessary to print them all. This in explanation to those whose notes on this matter do not appear in our columns.

WE HAVE received from Mr. A. Hallett, Fayette Springs, Pa., a box of blooms of the Chinese primula, none less than one and a half inches, and many fully two inches in diameter, all of very good colors. Mr. Hallett writes that the flowers were cut from plants that are three years old and he considers this "sufficient to show that it is not necessary to sow seed every year as is claimed by some florists."

SOME SPECIMEN blooms of the new carnation, "Nellie Lewis," have been sent us by James Vick, Seedsmen, Rochester, N. Y. The light background is so thickly sprinkled with scarlet as to give the appearance of a dark pink flower at a distance. It may take as a catalogue sort, but hardly as a cut flower variety for florists.

AGAIN we remind our readers that we positively shall not admit to our columns a communication signed by simply an initial or nom de plume unless the the real name and address of the writer is given for our own information. The attention of "subscriber" who writes a note on the "Climbing Perle" is called to this rule.

ALL LOVERS of orchids will be pleased to learn of the intention of the publishers of *Lindenia* to issue an edition with English text, as announced in our advertising columns this week. The American edition will make this beautiful publication much more useful to orchid growers here.

The Society of Indiana Florists convened in annual session at Lafayette on the 21st inst. This is the fifth annual meeting of the society. Several valuable essays on trade subjects were read, including papers on the rose and the carnation.

H. H.—The violet blooms sent are certainly very new. Can not say what is the trouble, but it is probable that your plants are affected with the disease now so common among violets and called the violet disease. There is no known remedy.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—By a German gardener and flower grower. Good references. Address Box 1, Central Valley, Orange Co., N. Y.

SITUATION WANTED—By a German gardener: aged 30; single; competent in all branches, private or commercial. F. H. PERA, LaGrange, Ill.

SITUATION WANTED—By a first florist and gardener, thoroughly competent, private or commercial. First-class references. Address H. V. 25 S. 4th St., Harrisburg, Pa.

SITUATION WANTED—By first-class florist to take charge of commercial or private place. Age 29; first-class testimonials. State particulars. E. FLORIST, Box 765, Kalamazoo, Mich.

SITUATION WANTED—By good German gardener. 30 on commercial place; 3 years' experience in America. Good references. Married. Address W. WITTMAR, 452 Belmont Ave., Chicago.

SITUATION WANTED—By a practical gardener 30 on private place; German, 40 years old; married. Best of references. Address M. F. BUCK, 312 S. Washburn Ave., Chicago.

SITUATION WANTED—By gardener and florist; single, age 31, in private or commercial place as foreman. Scotch; age 3 references. Address Apply W. N. care American Florist.

SITUATION WANTED—By Feb. 1, as foreman in a commercial place; thorough, practical experience in growing hybrid and sea roses, chrysanthemums forcing of bulbs and all kinds of cut flowers. Single; first-class references. Address F. FLORIST, 113 West 30th St., New York City.

SITUATION WANTED—By March or April as a practical gardener and florist; competent in all branches. Private place preferred. Good grower of roses generally, cut flowers, fruits, vegetables, also tropical plants; laying out choice gentlemen's places. 35 years experience; age 32; married. Address references. Desiring to change climate, North Middle States preferred. Mention salary. Address G. A. BOEHL, 75 McGovery St., Chicago.

WANTED—A second hand florist's ice box. G. VAN BOCHOVE & BRO., Kalamazoo, Mich.

WANTED—First-class florist. A man; sober, reliable, all round grower, in city of 40,000 population. Address care J. C. Vaughan Chicago.

WANTED—A good propagator; a good steady man, sober and industrious. State wages wanted and give references. Address N. N. & NEUNER, Louisville, Ky.

WANTED—To buy a good florist's business in a live town within 30 or 40 miles of Chicago. Address full particulars. F. M. care American Florist, Chicago.

WANTED—To let a good, sober, single man, experienced in cut flower growing, free of charge, a new and very greenhouse in city of 3,000. D. E. DARTCH, Harrison, Arkansas.

WANTED—Gardener; single man capable of growing carnations, roses, violets. Address with references and salary desired. Address ANDREW FRIGGSON, 43 Collins St., Detroit, Mich.

WANTED—A thorough, practical florist, to grow palms, ferns and orchids for commercial purposes. Give references and salary expected. Address Drawer 585, Minneapolis, Minn.

WANTED—Competent foreman for large commercial place, both plants and cut flowers for shipping. State salary expected, and name references when applying. Address O. care Am. Florist.

WANTED—To rent some greenhouses in a good locality within 15 miles of Boston, with some land and house connected, must be in good repair. Address care Saml A. Parsons, 230 Tremont St., Boston, Mass.

WANTED—A young man with some experience in greenhouse work, must be sober, industrious and willing to work; steady place for the right man. Address, stating wages, Lock Box 178, Sharon, Pa.

WANTED—A first-class florist, to take charge of a set of houses; must understand the growing of roses and other cut flower plants; also plants for the wholesale and retail trade. Address A. GIDDINGS, Danville, Ill.

SPECIAL FOR FLORISTS.

About February 1st, we shall print a large edition of circulars illustrating the Japan Snowball and the Red-Flowered Dogwood.

For orders for circulars received previous to going to press we offer them at very low prices. Circulars have your name and address on them; Sample and prices on application.

Every florist can sell a large number of these beautiful shrubs at very little expense, and the profit on them will more than pay for the effort. The following from a New Jersey customer speaks for itself:

"I am meeting with good success in the sale of the JAPAN SNOWBALL, and the prospects that I shall sell you a large order for them. Have sold so far seventy-three plants."

Advertising Wisdom.

[Extracts from *Printers' Ink*, January 1.]

TWO RULES IN WRITING ADS.

Absolute simplicity of expression. Forget that there are other merchants within a thousand miles of you, or a writer within ten thousand, and write for the people alone whom you want as regular buyers at your store.

HOW TO MAKE UP AN ADV.

Write out what you have to say, put it in the hands of the type-writer and make half a dozen copies of it, strike out words here and there and put in new ones. Be sure there is no ambiguity. Then consider your principal lines and their relations to each other. No printer can do justice to two or three great display lines next to each other. They must be set off by other lines and separated by blanks.

When this seems reasonably good send over the copy to a good printer. Don't say you want to see proof the same afternoon, but give him time enough to do it as well as it can be done. It might be respectfully done by an ordinary workman, but the best workman might be employed on something else which could not be left. Give the printing office a show.

The display lines must particularly be looked after. They frequently do not appear as well in type as was previously thought, and must be changed. No very skillful advertisement was got up at the first attempt. Let the printer put the matter in type the best he can, and then alterations can be made. Sometimes when it is thus in shape some statement seems raw or inadvisable. Change it. Never put a line of type in an advertisement that cannot be easily read. Script, black letter, fantastic types are inadmissible.

Thirteen picas, or two and one-sixth inches, is called the standard width. The authority for this is rather obscure, but it is undoubtedly the width most in vogue. An electrolyte for general use should not be made wider than this, and one that does not exceed two inches in width is better still. A good effect can be made with cuts of the latter width, and they can be used anywhere.

CLASSES OF ADVERTISING.

I propose to class advertising space in telephone books, so-called blue books of gratuitous circulation, pamphlets containing hack and herdic rates, lists of express offices, free-gratis cooking recipes, and books and pamphlets of like nature, under the head of general desultory advertising. At very low rates cover positions may have certain value, but inside space is worth about as near to next to nothing as can be without being nothing.

By desultory advertising I refer almost entirely to advertisements in that class of publication known as the paper without paid circulation; to advertisements encircling maps and charts; to advertisements in unofficial time tables, and in other matter supposed to be hung up in conspicuous positions.

Few, if any, of these pay the advertiser one quarter of one per cent of his investment.

The best rule, and the only rule to follow is, I believe, to advertise in nothing

of doubtful character—to stick to the newspaper and the legitimate product of the printing press, with such few additions as will appropriately fit into your business.

Actual experience has taught me that a discount of about 90 per cent should be made on any statement made by a canvasser before advertising in any map, chart, gift paper, or anything else which does not have a bona fide sale and subscription list.

I do not believe in city directory advertisements, with the exception of outside cover spaces and a few conspicuous inside positions.

Good printing and good color work, used in conjunction with newspaper advertising, allows the one to increase the value of the other.

I am a firm believer in the value of printed matter. No matter how much newspaper advertising the advertiser may do, nearly 25 per cent of its effectiveness will be lost unless he has a circular or book of information to present to the inquirer.

On the other hand, there are few cases where circular and catalogue advertising will in themselves bring any adequate return.

The utilization of the catalogue to give the information, and the newspaper advertisement to make people send for it, produces the successful business-bringing combination.

HENRY C. SCHMIDT, head of the firm of J. C. Schmidt, Erfurt, Germany, died at Santa Cruz, Canary Islands, Dec. 26. The body was returned to Erfurt for burial. Mr. Schmidt had been in poor health for several years. He established the leading catalogue business of its kind in Europe and did a very large home and export trade.

CHICAGO.—Mr. E. A. Barnard, of W. W. Barnard & Co., has just returned from a two months' visit to his orange groves near Tampa, Fla. Jas. H. Munson, well known to the seed trade, formerly with Hiram Sibley & Co. and later with Jos. Breck & Sons, Boston, Mass., was found dead in his room the morning of Jan. 15. The coroner's verdict gives the cause of death as heart disease.

MR. GEORGE S. HASKELL who suffered an attack of heart trouble at Springfield last week is all right again. Newspaper accounts of the matter were much exaggerated.

MR. ALBERT DICKINSON suffered a severe concussion of the knee from a fall at the Board of Trade entrance and has been laid up for nearly a week.

Vegetable Seeds for Market Gardeners.

Flower Seeds and Bulbs for Florists.

Our reputation among the critical Market Gardeners of this country, for having varieties and strains specially adapted to their wants, is second to none.

Our new Florists' and Market Gardeners' **WHOLESALE PRICE LIST** is the best and most complete list of its kind ever sent out. Write for it on your printed letterhead or enclosure business card to show you are entitled to it. Our Horticultural and Poultry Supply Circulars are complete and can be had for the asking.

KANSAS CITY.—Representatives of twenty of the largest nurseries in this section met in this city on the 6th inst. and organized the "Western Wholesale Nurserymen's Association," with officers as follows: H. T. Kelsey, of St. Joseph, president; R. H. Blair, of Kansas City, vice-president; Frank Worcester, of Fort Scott, Kan., secretary and treasurer; D. S. Lake of Shenandoah, Ia., A. A. Ambrose of Nevada, Mo., G. J. Carpenter of Fairbury, Neb., A. C. Griest of Lawrence, Kan., and W. P. Stark of Louisiana, Mo., executive committee. The association has been organized upon the same lines that the Nurserymen's Exchange at Rochester, N. Y., was founded. It is expected that the nurserymen of the west will unite with the new association. The objects are consolidation of interests and the maintenance of living prices for nursery stock. Membership will be confined to nurserymen who employ agents.

FIFTY-TWO ISSUES and one or more colored plates at one dollar. January is subscriber's month. Are the boys all hooked for one? A bound volume of the FLORIST helps the horticultural library.

THE NEW ROSE

WABAN

This very valuable rose originated at the Waban Conservatories of E. M. Wood & Co., Natick, Mass. It is a *SPORT* from Catherine Mermet and identical with that variety in every characteristic, excepting color, which is a rich, deep, **BRIGHT PINK**; it sustains the same relation to its parent as Duchess of Albany does to LaFrance. The only objection to C. Mermet is its frequently pale, insipid color in cloudy weather; experience has shown that the **WABAN** retains its deep rich color in all kinds of weather; it will, without doubt, prove to be as valuable as **THE BRIDE** which is also a sport from the same magnificent variety.

IT HAS ALREADY RECEIVED THE **SILVER MEDAL**

of the Massachusetts Horticultural Society; of the Pennsylvania Horticultural Society, and **CERTIFICATE OF MERIT** from each of the Societies in this country and Canada where it has been shown.

Ready for Distribution on April 15th, 1891.

Orders booked now, will be filled in strict rotation.

The following Agents have been appointed to sell the Rose in the respective territories given below:

W. J. STEWART, 67 Bromfield St., Boston, Mass., for the New England States (except Connecticut) and Quebec.

JOHN N. MAY, Summit, N. J., for Connecticut, New Jersey, New York, Michigan, Indiana and Ontario.

ROBT. CRAIG, 49th & Market Sts., Philadelphia, Pa., for Pennsylvania, Ohio and all Southern States, east of the Mississippi River, and District of Columbia.

J. C. VAUGHAN, P. O. Box 688, Chicago, for Illinois, Wisconsin, Minnesota, and all States and Territories west of Mississippi River and Canadian Territory west of Ontario.

Chicago.

The gardener who was recently foreman for Nicholas Singler makes decided objection to the statement recently made regarding the failure of Mr. Singler's violet house. He claims he was in no way responsible for the failure, and that Mr. S. took full charge of that house himself.

Fisk & Ristow is the firm name which appears on the new sign over the door of 149 State street.

Among the new Chicago corporations reported by the Secretary of State on the 10th inst. was the Lorraine Park Company, to raise and prepare for market fruit and fruit trees and all kinds of shrubs and plants; capital stock, \$500,000; incorporators, Homer Cook, Edward L. Upton and Alfred E. Holt. Mr. Frederick Law Olmsted, the landscape engineer, has been in the city for some time working on general plans for the World's Columbian Exposition.

Messrs. M. A. Hunt and J. T. Temple spent a few hours in the city on Friday last. They were on their way home from the meeting of the Executive Committee of the S. A. F. at Toronto.

P. Blaumeiser & Son, of Niles Center, tried the Gontier this season and met with very gratifying success. The plants were grown cool in a carnation house.

Business is still very poor, and prices are low. A State street store has a sign out offering roses at 50 cents a dozen.

World's Fair matters are still hanging fire. Director-General Davis has just returned from his eastern trip.

The forthcoming entertainment of the Florist Club will be held Friday, Jan. 30, at Grand Army Hall, northwestern corner of Dearborn and Adams streets, beginning at 8 o'clock. There will be music, dancing and supper.

Cleaning Brick Flues.

For the benefit of C. P. and others I will give my method of cleaning brick flues. I take off two or three bricks from the top of the flue at a distance of ten or twelve feet from the furnace, stuff into the flue a lot of straw or paper which has been saturated with oil, recover the flue all but one brick, set fire to the straw or paper, clap on the last brick and the job is done. The soot will be burned out clean. The object of starting at a distance from the furnace is to get past the ashes into the pure soot, which burns readily when fired in this way. The hole in the flue must be immediately covered to avoid filling the house with smoke.

HUGH HOLLAND.

URBANA, O.—Charles H. Murphy, the florist and nurseryman, died on the 13th at his home in this city, aged 76 years. He was born in Scotland, came to America when 21 years of age, spent two or twelve years in Cincinnati, and took up his residence in this city in 1849, where he has since remained. He was succeeded in business last summer by his sons R. H. and Walter, under the firm name of C. H. Murphy's Sons.

Florists' Letters

Emblems, Monograms, etc. These letters and designs are made of the best immortelles, wired on wood or metal frames, having holes drilled in them to insert tooth-picks, by which they are fastened to the design. Give them a trial. We will send these goods to be superior to any in the market. PAT. DEC. 1890.

NOTE.—All infringers or imitators of the above letters and designs will be prosecuted to the fullest extent.

Send for Sample.

THE CHEAPEST AND BEST OF ALL.

FIR TREE OIL

INSECTICIDE—soluble.

FOR PLANTS.—To make a solution for washing or cleansing purposes.—Mix a Pint of Fir-Tree Oil to ten gallons of water.

For Green and Black Fly, Thrip, American Blight, Woolly Aphis, etc.—Mix a Pint of the Fir-Tree Oil to two gallons of water, or three table-spoons to the pint.

For Mealy Bug, Brown or White Scale—Mix a Pint of the Fir-Tree Oil to four or six quarts of water, four to eight table-spoons to the pint.

For Spider and Caterpillar—Mix a Pint of the Fir-Tree Oil to two gallons of water, or six table-spoons to the pint.

For Ants, Grubs, Worms, Wood Lice, etc. in the Soil—Mix a Pint of the Fir-Tree Oil to two gallons of water.

The most efficacious way to use Fir-Tree Oil in small quantities is to apply it with one of HUGHES' APPLICATORS.

When applied to the roots of delicate plants the soil should be drenched with clean water immediately afterwards, in all other cases washing is not necessary. Used with warm water it is quicker in its action than when cold is used.

Soft or rain water is necessary, and Applied in Wood, Tin or Pot Vessels.—Galvanized Iron Vessels must not be used.

FOR ANIMALS.—For Skin Diseases and Killing Vermin mix one part of Fir-Tree Oil with three parts of warm water and wet the affected part each day. In some cases it may be used stronger. For Ringworm apply full strength with a brush each day.

FOR WASHING DOGS.—Put a large coffee cup full of Fir-Tree Oil in a pail full of warm water and use a piece of common soap to make a lather.

For NAILS—Apply with a brush full strength every day.

FOR BIRDS INFECTED WITH PARASITES.—Put a table-spoonful of Fir-Tree Oil in one quart of warm water and dip the bird in it, taking care that its eyes are protected. Hold the bird in one hand for one minute, then dip into clean tepid water; this may be repeated. If necessary a much weaker solution may be used with a spray producer.

FOR EGGS.—The Fir-Tree Oil to be brushed into the crevices, or a solution of one part to three of water applied to the inside with a brush.

FOR NITS IN CHILDREN'S HAIR.—Mix one part of Fir-Tree Oil with three parts of warm water and apply with a comb or brush, the hair can be washed shortly after.

FOR WASHING FLANNELS AND UNDERCLOTHING.—Put a wine glass full in ten gallons of water for steeping; the same may be put into the boiler. Common soap may be used but no other preparations.

Sold in Bottles, half pints 15 cts.; pints 25 cts.; quarts 40 cts.; half gallons 50 cts.; gallons 75 cts.

Drums, 5 and 10 gallons each, at 175 per gallon.

Manufactured by E. GRIFFITHS HUGHES,

FLORAL DESIGNS.

The help for Cut Flower workers. 162 pages, colored plates. Edition nearly exhausted; speak quick. Address (with \$3.50 for the book)

J. HORACE McFARLAND,

Box 655, HARRISBURG, PA.

THE February issue (1891) of THE AMERICAN GARDEN will be especially devoted to Orchids. It will be racy, artistic, instructive, correct. For the first time in this country the question "What is an Orchid?" will be answered. Among the notable features of the issue will be the following articles and discussions:

A GENERAL VIEW OF THE ORCHID FAMILY.
THE BEST NEW ORCHIDS AT THE ROYAL GARDENS, KEW.
ORCHIDS AT HOME IN BRAZIL.
ORCHIDS FOR BEGINNERS.

CYPRIPEDIUMS.
METHODS OF CROSSING ORCHIDS.
ORCHIDS IN CALIFORNIA.
CONSTRUCTION OF ORCHID HOUSES AND TREATMENT OF ORCHID PESTS.

The number will also contain an account of the Government Seed Bureau, by the ex-Chief of the Division. Every gardener, and especially every seedsman, should read this article. The number will be beautifully illustrated.

THE RURAL PUBLISHING CO., Times Building, NEW YORK.
Price, \$2.00 a year. In club with American Florist, \$2.50.

TO BE PUBLISHED ON THE 1st OF FEBRUARY NEXT, AN AMERICAN EDITION OF THE

LINDENIA The "GRAPHIC OF ORCHIDS."

CONDUCTED BY

F. LINDEN, LUCIEN LINDEN, EM. RODIGAS, AND R. A. ROLFE.

The Colored Plates by the celebrated artists, P. DE PANNEMAËKER, A. GOOSSENS, and G. TEVEREYUS.

An American edition of the "LINDENIA" will be published regularly on the FIRST OF EACH MONTH, and issued in half yearly volumes, each of which will form an Album of beautiful portraits, executed in natural colors, of NEW, RARE or popular species, or hybrids of Orchids. The plates are 14½ inches long by 11 inches broad, which will be found a most convenient size for use in the orchid house or drawing room. Each monthly number will contain FORTY PLATES with eight pages of text in English only, with Latin diagnosis. The descriptive and cultural notes of the Orchids figured will be given by M. M. LINDEN, RODIGAS and R. A. ROLFE; the horticultural press of every country has pronounced the "LINDENIA" to be "the highest class and cheapest illustrated publication relating to Orchids." The printing and colored plates are executed in the most finished style, representing the Orchids illustrated in the most perfect and natural state, both in pseudo bulbs, leaves and flowers.

TERMS OF SUBSCRIPTION: Six Months (one half-yearly volumes with 24 plates) \$6.00, post-free, payable in advance.

APPLICATION SHOULD BE MADE TO THE PUBLISHER,

M. LUCIEN LINDEN, 100 Rue Belliard, BRUSSELS, BELGIUM.

— MAY ALSO BE HAD AT ALL THE PRINCIPAL LIBRARIES. —

A specimen number will be forwarded to any one applying to the above address.

A. F. ATTENTION.

NOTICE RELATIVE TO THE AWARD FOR STANDARD FLOWER POTS.

The following articles not being admissible in the reading columns we present them to the readers of the Florist in this form, wishing to verify the statements already made by us.

A. H. HEWS & CO.

TO THE EDITOR OF "THE AMERICAN FLORIST":

In the interest of justice and fair play, I would like you to insert the following, relative to the award on flower pots. I am a potter by trade, and consider myself an expert. I examined the pots thoroughly as exhibited by Hewes & Co. and Whilldin & Co., and under oath I wish to make the statement that I consider the statement made by Mr. Hewes relative to the sizing of pots after they were made, by the parties receiving the award, a correct one.

G. W. MILLER, 1748 N. Halsted Street, Chicago.

GEORGE W. MILLER, of Chicago, a florist, personally well known to me, Nicholas Coones, a Notary Public for Cook County in the State of Illinois, personally appeared before me and on his oath says that he personally examined the pots above mentioned and considers the above statement hereunto annexed to be in his judgment correct.

Subscribed and sworn to this 15th December, 1890.

NICHOLAS COONES, NOTARY PUBLIC.

I, W. P. BROWN, of Cambridge, State of Mass., do under oath make the following statement: I have been concerned with the manufacture of Flower Pots for the past seventeen years, and consider myself an expert. I thoroughly examined the pots that received the award at the late exhibit of the Society of American Florists and hereby affirm that the statement made by Mr. Hewes, relative to the sizing of pots after they were made, is a correct one.

WM. P. BROWN.

CAMBRIDGE, MIDDLESEX, SS. Dec. 27, 1890.

Then personally appeared before me, the above named William P. Brown, and took oath that the above statement made by him is true.

MILTON L. WALTON, JUSTICE OF THE PEACE.

CAMBRIDGE, DEC. 27, 1890.—I hereby certify that I have known William P. Brown for some 15 years, and believe him to be a man who would not make a false statement.

MILTON L. WALTON.

A. H. HEWS & CO., North Cambridge, Mass.

THE PROPRIETORS of the Madison Square Garden, New York City are making arrangements to give a competitive exhibition of chrysanthemums next fall. They send us a printed list of subscriptions toward premiums, the amount so far subscribed footing up a little over \$2,000. Among the subscribers are some of the wealthiest citizens of New York.

Notes From Canada.

BY WM. FALCONER

Toronto is a beautiful city with every evidence of thrift, industry and progress. It is governed by a mayor and thirty-nine aldermen, and has the reputation of having the purest and most exemplary government of any city on the continent, nevertheless its rulers are facetiously known as "The Forty Thieves." The city fathers are heartily in favor of park and garden decoration and are exerting themselves in carrying out the beautification of the city grounds, not only in public places but around the several government institutions. And they have already acquired extensive tracts of land for park purposes and pride themselves upon the fact that, in proportion to their population, they have a greater acreage of park lands than has any other city in the country. And still they cry for more. But this cry is for park and garden spaces within the city in its most thickly settled parts. They believe, and surely we heartily concur with them, that now is the time to acquire these central breathing garden spots, and not after the land doubles or quadruples in value and sanitary reasons shall compel its purchase by the park department no matter at what price.

The city greenhouses, rather limited in extent, are filled with a miscellaneous assortment of plants, winter as well as summer blooming, and many bedding plants. Calanthes and cypripediums were in flower in an orchid house; a Marechal Niel rose was in full bloom as a trellis vine, and epacris, coronillas, brachysemas, eupatoriums and other boyhood's favorites reminded us of the gay conservatories of England.

A big and bushy plant of Pandanus Veitchii was coveted by some of us who estimated its worth by the amount of cuttings it would yield.

My attention was directed to a large number of "hybrid" echeverias in one of the greenhouses. Evidently they were crosses between Cotyledon gibbiflora metallica and C. secunda glauca major or other vigorous purple and green or glaucous-green kinds, and displayed a large variety in form and color of foliage.

Sempervivum calcareum was also grown in quantity and under the name of S. Californicum. The name Californicum is wrong, there is no such a name among sempervivums, it is simply a catalogue corruption of calcaureum. Furthermore, this species is a native of the calcareous mountains in the southwest of France; and no sempervivum of any kind is indigenous to California. Sereno Watson in his "Botany of California" mentions the common European houseleek, S. tectorum, as "often found half wild about old houses," nevertheless it is not native to the country.

Mr. Dunlop's rose growing establishment is near the out edge of the city and consists of several hip-roofed greenhouses over 100 feet long, constructed upon the newest and most approved plan and heated by steam. To us all this was a general surprise. Not only were we astonished to find such an extensive and well appointed establishment in Toronto, but the cleanliness, thrift, vigor and general excellence of the roses were not surpassed by anything in the States, and this was publicly emphasized by Mr. J. Dean and Mr. J. N. May at the banquet in the evening.

His last built house is 140 feet long, hip-roofed and glazed with double-thick, French glass, 16x16 inches square. In glazing the glass is butted together, not overlapped as is the case generally, and held in place by battens screwed down over the sash bars. The glass is not bedded in putty. When the panes are perfectly square, say 16x16, there are better chances to get perfectly matched tight fitting edges than would be the case were the panes 12x16, or any other unequal size. These roofs I am assured are almost perfectly water tight, that is, while they may leak a few drops at the beginning of a shower of rain, after a few minutes the drip stops altogether; and they have two other advantages, namely, there is no darkening of the roof caused by dirt gathering at the laps, and never any drip inside from condensed moisture on the glass, the water runs down the glass surface without a check as it would meet in the case of lapped glass. When a pane of glass gets broken the battens are unfastened and the broken pane knocked out and the other lower panes are then pushed up to fill the vacancy and the new pane introduced at the bottom and the battens screwed down again. There is nothing new about this system of glazing, but I must admit that I have always been a little prejudiced against it. But here the fact stands boldly out, however, that it is both economical and effectual, and as Mr. Dunlop's older greenhouses are also glazed in this same way, if he didn't believe it to be the best of all methods of glazing greenhouses he certainly would not have adopted it again in his new houses.

His sash bars are of clear white pine and grooved to carry off drip, and under the ventilators he also has grooved troughs to carry off the drip.

His benches are in regulation order, that is, there is a front and back bench raised well up to the glass, and a wide sloping bench in the center with a single plank running lengthwise in the middle to walk upon. The bottom of the benches are of tamarack (American larch) which is said to be very durable under such circumstances; and the soil is about four inches deep upon the benches.

The ventilators are worked by patent

gear. A cool temperature, probably 55° or thereabout is maintained, and this is apparent in the stout stocky nature of the plants and their fine foliage.

Tobacco stems are strewn along the pathways, and by a very simple arrangement a movable iron pipe ½ inch in diameter by about a foot long is affixed to the steam pipes here and there along the pathways for steaming tobacco stems in the interest of greenfly. A common barrel is filled with tobacco stems and through a small hole near the bottom the steam jet is introduced and the steam turned on for a short time. This is done in the morning rather than in the afternoon, for it is not well that the foliage should be wet when night sets in. I observed that he had also a zinc vessel about as big as a barrel for steaming the tobacco stems in.

Dunlop's Golden Perle Rose. Some beautiful flowers of a golden yellow flowered sport of Perle were exhibited in the Executive Committee room by Mr. Dunlop, and they commanded general admiration. We also saw the plants growing and blooming in Mr. D.'s greenhouses, and they seemed to be perfectly "fixed" in character and as free in growth and flowering as the typical Perles.

Sunset Rose.—Mr. S. Tidy, the Yonge street florist, says: We regard Sunset as one of the finest roses in the market; our customers are very fond of it, in fact, we can not get enough of it.

Mr. E. G. Hill brought bunches of his new carnations from Richmond, Indiana. They were large, fine blossoms and much admired. Mrs. Harrison, white, pencilled with pink; Indiana, blush streaked with pink; Annie Wiegand, blush-pink; and George Hancock, Fred Dornier, H. E. Chitty and Edwin Lonsdale, all described in the FLORIST January 15, page 360, were the most admired. And I am glad to find so eminent an authority as Mr. Hill concur with me in my experience that in order to have good carnations we have got to keep up new varieties. Varieties soon run out. This is my experience anyway. Take E. G. Hill which three years ago was one of the finest carnations I ever grew, large, massive and prolific; to-day it is hardly worth any thing. Charles Henderson too has gone back on me and Mrs. Marshall has lost its vigor. On the other hand I never had *Petunia* as fine as it is with me this year. Mr. Fisher, of Buffalo, looks upon Silver Spray as the gem of the race. Hurry up John with your big four-inch fellows. In well grown specimens of Gibbonsi one may even get that now, but it's a late blooming, one-crop carnation and I don't think can be grown with profit by the florist.

Callicarpa purpurea is a hardly shrub of neat, low growth, and whose branches in the fall are closely covered with clusters of small, glossy violet-blue berries that hang on for many weeks and are strikingly attractive. Friend Temple, of Davenport, Iowa, tells me he bought some of these *callicarpas* for 25¢ or thereabout a piece and grew them on through the summer in pots. In the fall he had a *chrysanthemum* show on his own account, and he arranged these brilliant berried *callicarpas*, scarlet and purple *salvias* and other seasonably handsome plants among his *chrysanthemums*, and the effect was both telling and pleasing. "And I sold everything," he told me, "the *callicarpa* bushes at \$5 a piece. It's so, and let me tell you those *callicarpa* bushes were so handsome I could hardly bear the idea of parting with them even at that price!"

Shrubby veronicas (*V. salicifolia* and its varieties) were other plants Mr. Temple had in good bloom at *chrysanthemum* time and sold "like hot cakes." They are easily raised and easily grown, but they are not hardy; they can be safely wintered, however, in a deep cold pit or frame, but it is well to keep up a young stock of them from cuttings every year.

Now, while it would not pay our wholesale flower growers to devote their attention to this sort of thing, there is money in it to the country florist who runs a plant and flower business and does a local trade. Get up beautiful plants, well grown and stocky, and present them to the people in an attractive form, and you will get rid of them at satisfactory rates. The average people don't know plants and don't know what they want, if, indeed, they want anything, and it is just here that your mission comes in—provide you the supply, and if the supply is appropriate and attractive it will create the demand.

Begonia incarnata grandiflora. Mr. Palmer, of Buffalo, grows this variety and tells me, in face of it, the typical *incarnata* is not worth growing.

Carnation Blooms Out.

I was much interested in a perusal of Mr. H. E. Chitty's letter in your issue for January 8, as to the number of flowers he had cut from a certain number of plants of his favorite variety *Lamborn* during the months of October, November and December. Your correspondent appears to be pleased with the quantity of blooms he has been able to cut, and more than satisfied with the pecuniary result. I am not sure whether he considers his crop of flowers an extra large one, but from the tenor of his letter I would imagine he does. Perhaps it may not be altogether out of place for me to give you my own statistics from a batch of plants less than half as numerous as Mr. Chitty's.

I have this winter devoted a new house 100x20 feet to carnations, with solid bed down the center and side benches. This house holds 1,700 plants, from 1,500 of which I have been cutting bloom since the beginning of October. I find by referring to my note book and sales returns that I have shipped the following blooms: during October 5,520, November 8,370, December 10,790, or a total of 24,680 flowers. Three fourths of these have been long stemmed. In addition to the foregoing numbers I have used a considerable quantity of carnations for mixing with small assortments of other flowers, and of these latter I have kept no tabulated account. I am justified therefore in putting my total crop at 25,000 flowers, and in doing this I am aware that I am under-estimating rather than over-reaching the figures. During Christmas week alone I cut 4,000 blooms which were all long stemmed with the exception of 350 white ones. I expect to be able to cut quite 9,000 additional blooms during the current month. I grow all the leading market varieties, some of which are the reverse of late blooming; did I but restrict myself to such a white variety as say Mrs. Fisher, I would be able to cut an

average of quite 500 more flowers per week. As to the quality of my blooms comparisons are said to be odious, but "seeing is believing," and I am perfectly satisfied that an inspection of my carnation house will prove to any one that it will compare favorably with any in New England, or I would refer them to Welch Bros., Boston. Mr. Chitty makes a good deal of the fact that in three months he cut "within a mere shade" of 10,000 blooms from 3,500 plants. I ought therefore to feel satisfied at having been able to cut over 25,000 flowers from 1,500 plants in the same time.

To put the matter in a nutshell, Mr. Chitty's plants have borne at the rate of something less than one bloom per month each, while my own have averaged considerably over five; had your correspondent's plants been as floriferous as mine he would have been able to cut not the rather insignificant number he tells us of, but "within a mere shade" of 60,000. If, however, he is satisfied—as his letter would seem to show—I have no reasons for feeling at all despondent.

WILLIAM NICHOLSON.

Framingham, Mass., Jan. 17, '91.

Hinze's White and Wilder.

In the number of your journal for January 8 appeared a very interesting article from Mr. Chitty, in which he congratulates himself upon having abandoned the long tried and well known old carnation *Hinze's White* in favor of *Lamborn*. If Messrs. Chitty, May and Traig could see our *Hinze's* and *Wilder's* we are satisfied they would have some doubt as to the wisdom of his action.

We have an old rattle-trap of a house twelve years old, poorly built and heated, and about ready to fall down. It is 25x100 and contains 3,100 plants of *Wilder's* and *Hinze's* which were planted the first week in October last. The varieties are about equal in number. From October 1 to January 1, three months, we picked 25,000 buds, a small majority were *Wilder's* and a very large majority were long stems, short stems being the exception. Several hundred plants, counted carefully to-day, gives us an average of eighteen flowers on the *Hinze's* *White* and eight on the *Wilder's*. Some of the *Wilder's* have twenty-five buds on them, and the *Hinze's* as high as fifty. While these last figures are exceptions, a very conservative estimate by disinterested florists who have inspected the plants, is that there are anywhere from 40,000 to 75,000 buds in sight today on the 3,100 plants. We would be very happy to have the three above named gentlemen estimate the number of buds in the house. We have hundreds of plants with from 30 to 70 flowers and buds, and would like some one in the trade who is an authority on carnations and a correspondent of the A. F. to see these plants. Mr. C. finds fault with *Hinze's* because too much time elapses between crops. We do not agree with him here. This house was planted in the same manner, with the same kind of stock in September 1889, and produced from 2,000 to 3,000 buds per week until April. But up to that date, six months, we had a record of 50,000 buds. We kept no record thereafter, but they bloomed profusely all summer, and we supplied not less than 10,000 carnations per month to florists in Philadelphia until October, when the house was replanted as it was one year ago and it is doing to-day just as it has been doing in one year. Out of 40,000 cuttings put in since

CARNATION DAYBREAK.

December 1, 36,000 are well rooted and a majority of them sold.

We do not get such prices as Mr. C. does or we would also build iron houses. Our carnations are all wholesaled excepting about 15 per cent and since a majority of the blooms are Wilders, which average nearly three cents, and the Hinze's two cents, not to forget our 1,000 at Christmas for more than three cents, a few hundred Wilders for four cents and a few we caught on to, like Mr. Chitty did, at 75 cents per dozen, we are satisfied our pinks have averaged us a fraction over \$2 per hundred, or between \$500 and \$600, a pretty good showing for \$18 worth of coal consumed and a very shaky house, which by the way we will have photographed and a copy forwarded to you.

To date the Wilders have been the most prolific bloomers with all the indications in favor of Hinze's for the near future, but if this year is a repetition of last year the Grace Wilders will get their record up

later on. We have been growing carnations this way for years, but were not aware we were such successful growers until we saw Mr. C.'s figures. Our ideal carnation is not that pictured by Mr. Thorpe's fertile imagination a short time ago. We do not hanker for dollar carnations. Imagine the energy exhausted in producing the carnations Mr. Thorpe dreams of!

In conclusion we would say to all inexperienced beginners in our craft, do not catch on to too many new things and never discard an old one until you have grown the new one on trial on a small scale, and a satisfactory trial at that. We know a few old beginners that this is not bad advice to. We bought our experience when green in the trade to the tune of \$500 per year, and often discovered our most fatal errors were in seeking after new things and discarding old ones unjustly condemned through ignorance and insufficient trial. As long as Hinze's White will give us 2,000 blooms per week

from 3,000 plants and its keeping qualities are such that we can hold them for a long time for emergencies and then sell them to the satisfaction of the purchaser, even though they travel 1,500 miles by express, we do not feel satisfied to displace such a faithful long tried old servant for a stranger.

DEWITT BROS.
Bristol, Pa.

Carnation "Daybreak."

The introducers, Messrs. W. P. Simmons & Co., describe it as follows: Flowers are of largest size, very double and full in the center, petals thick and heavy, and flowers last well. The color is a beautiful and delicate flesh with no salmon shading and is entirely distinct from Grace Wilder or any other variety now in cultivation.

The Lamborn Carnation.

Ed. AM. FLORIST.—Mr. Grove P. Rawson in the *Florist* for January 5th, inquires about the keeping qualities of carnation Lamborn, which of course is a very important matter, especially in cases where the grower depends entirely upon his shipping trade. The few hundreds of this variety that I have shipped were sent to Messrs Hammond & Hunter and John Young of New York, and I have not heard anything from these gentlemen either one way or the other about the flowers so shipped. Perhaps they can give some information on the subject. The bunch of this variety which I now send to your office by express to day was gathered with a lot more last Friday, January 16th and have been in my flower cellar until now, and I find them much improved by being in the cellar a few days. I hope the bunch sent will arrive in such condition as will enable you to form an opinion of both the keeping and shipping qualities of this variety. H. E. CHITTY, Paterson, N. J.

[The flowers reached us on the 22nd, in splendid condition, and still very fragrant.—Ed.]

Hinze's White.

While the new varieties of carnations are many of them possessed of merit, yet they must prove worthy indeed to be able to take the places entirely of our old standard sorts. Mr. Chitty writes of the Lamborn, an excellent new carnation, yet it is a question whether in the hands of the average grower it would prove so superior to Hinze's White as to warrant us in throwing out the latter entirely as Mr. C. has done. The Lamborn is unquestionably a fine plant; flower large, a very clear white and prolific, but as I have seen it grown it lacks the apparent strength of the Hinze's. In a house here at Bristol, De Witt Bros. are growing Hinze's White to perfection. The house is planted with this white and Wilder and contains about 3,100 plants, the Hinzes I think being in the majority. They are in solid beds and on side benches. From the time they were brought in, October 1, the growers have been cutting immense crops of flowers from them, but kept no record up to November 25th; from that date to December 25, one month, the house yielded 7,000 cut blooms as registered, though it is supposed that many small cuts for retail trade were not put down at all. The plants at this time show no loss of buds, the Hinze's bearing from fifteen to fifty buds each; one grand plant that I examined had fifty-two apparent buds, though a number had already been cut off. The flowers of the

Hinze's White, when fully matured, are of good white color and the majority of them will measure two and one-half inches in diameter. The temperature on these plants is never a high one, and not having been forced they are in perfect health and from all appearances will be likely to keep up their bloom all winter. The Portia also does well with these growers, one plant shown me in another house containing seventy-three apparent buds.

HARRY CHAMBERS.

Chicago Carnation Notes.

J. F. Klimmer of Oak Park, says Silver Spray is by far the best white carnation grown around Chicago. He has seen it doing well in all kinds of soil. He had to give up Hinze's White as he could not grow it successfully. His soil is a light black sandy one.

He considers Tidal Wave the best colored carnation he has ever grown. He grows Buttercup, which grows and blooms quite well with him, though an occasional plant has a mysterious way of going back on him at times. He likes J. R. Freeman. With him it is a large flower and opens something like Tidal Wave. He tried Golden Gate this season. It has grown well but the blooms burst and it hasn't blossomed free enough to be very profitable.

He has tried Lamborn and Swayne but will throw them both out as he can't get any satisfaction from them.

Century pays him well for an early carnation. Christmas does well and promises to be better than Grace Wilder later in the season. He finds that Grace Wilder pays him well before the holidays but after that he prefers Christmas. About February 1 he will throw out his plants of Century and Grace Wilder as they don't pay him for the space occupied after that date.

P. Blaumeiser & Son of Niles Center consider Silver Spray the best white carnation taking everything into consideration. They tried Lamborn this season and like it. It is dwarfier in growth than Silver Spray and has done very well with them. They can't do anything with Grace Wilder, but are favorably impressed with Tidal Wave.

Mr. Boettner of E. Weinhoeber & Co says he likes Silver Spray but that Hinze's White is by far the best white carnation with them. This season Hinze's White came into bloom the first of any of their carnations and has continued steadily in bloom ever since. This variety is not a cropper with them. He says they cut more and better flowers from Hinze's White than from Silver Spray. They grow no other whites than the two named.

Grace Wilder is their most profitable carnation. With them it blooms exceedingly free. From a given space devoted to Grace Wilder they have cut fully twice as many flowers as from any other carnation occupying the same amount of space. Their soil is rather heavy.

They grow Portia and Garfield, but Portia gives rather small flowers, and Garfield comes into flower too late to be satisfactory. They have never yet had Garfield in full flower till February.

They grow Sport or Emperor of Morocco for a dark one, and they consider this the best of the crimson.

Best Carnations.

A. S. L. on page 360 of AMERICAN FLORIST asks which are the best four or

six varieties for a new beginner. If he confines himself to four varieties we think he will succeed better. For all purposes, combining the distinct colors, abundant flowers, long stems and easy culture, Hinze's White, Grace Wilder, Anna Webb and Portia have always succeeded the best under my observation.

Bristol, Pa.

THOMAS BREWER.

Best Bronze and Pink Sorts.

The following in reply to the query by A. E.:

Six good pink chrysanthemums for any purpose, covering the season: M. E. Nichols, Ada Spaulding, Miss M. Wheeler, Lilian B. Bird, Mrs. Hicks Arnold, John Lane.

Nine good bronze, covering the season: Wm. Robinson (Magicienne), Source d'Or, Mrs. Bowen, Coronet, W. W. Coles, G. F. Moseman, M. Ed. Andre, Carry Denny, Mrs. A. C. Burpee.

Standard chrysanthemums are plants having clean stems not less than two feet in height before the heads of the plants are formed.

JOHN THORPE.

I note enquiry for six best bronze and pink chrysanthemums for florists' use and would suggest the following, being all free and large flowers, of strong and healthy habit:

PINK.		BRONZE.	
†Mrs. D. D. Farson	†Mrs. H. A. Pennock		
*Ada Spaulding	Mrs. J. J. Baylis		
Mrs. I. Clark	E. G. Hill		
*Royal Aquarium	†W. W. Coles		
†J. R. Pitcher	Mrs. A. C. Burpee		
Violet Rose.	*S. B. Dana		
†Late. *Early.			

T. H. SPAULDING.

"The Chrysanthal Etymon" Again.

Some time since there appeared in these columns an article signed "Connecticut" in which the writer asserts that the dominant root element of chrysanthemum is taken from a Greek word meaning transverse. I do not know what Greek word he refers to, but I do know the word that is usually accepted viz. *chrysos*-yellow. In regard to the statement of the writer of the article referred to that the Greeks applied the name chrysanthemum to certain plants having a crossway arrangement, I can only say, that in consulting Dioscorides, the oldest Greek at hand, I find the name applied to one of the composite, to a plant having a very close resemblance to our chrysanthemum.

J. F. COVELL.

Buffalo, N. Y., Jan. 19, 1891.

Floriculture in the South.

The queries in January 8 issue in regard to southern floriculture could be more satisfactorily answered if the southern florist had indicated in which state he lives, as the climate differs a great deal according to locality; however, I will briefly give my views on the subject suitable to this latitude.

In regard to the construction of the houses I prefer the full span roofed, the width and height to be governed by the stock to be raised in them; it is not so necessary here to build them as light as they are north, because we usually have plenty of sunshine during winter, still for roses I of course prefer them light. The ventilators ought to run the full length of the house, and if possible on both sides of the ridge, about three feet deep, build the houses so they slope to the east and west, at least I find that our houses so constructed produce the best stock; make the pitch about 45 degrees. In regard to heating I dare hardly venture to give advice for fear of being contradicted on this important question, but as I have had experience with both steam overhead and underneath, and hot water in large and small pipes, I do not hesitate in recommending the hot water system underneath in 2-inch pipes under pressure.

Carnations cannot be grown at a profit if you are to buy the plants from the north, because if they are shipped with clumps the express charge is too exorbitant, and if the soil is removed and they have been in transit several days they will never recuperate. In this locality carnations can not be grown outdoors on account of the heat and dry atmosphere; while I have seen them successfully grown in the open ground in Atlanta, still they were not to be compared with those grown in New Jersey or elsewhere. By keeping them in pots during summer and planted in frames during September and shaded with lath frames, fair success may be had, but I have abandoned their cultivation. Violets are extensively grown around here in all private yards and need no protection, but to secure nice flowers on long stems they must be planted in frames, as well as pansies, daisies, etc.

Cut roses are especially well suited. I plant them on raised benches in the beginning of July, shading the glass, which by the way is done on all the houses, and keeping the paths constantly wet, consequently plank walks are preferable for tidiness; sake; syringe morning and evening, and guard against the leaves being scorched. I have never tried to plant roses in the open ground and cover the space in the fall, I don't think it advisable because the red spiders are apt to appear, while under glass they can be kept down by frequent syringing. Azaleas, camellias, evans and such are better kept in an open frame house, shaded by lath and protected during winter by cloth; in such houses a flue can be used to advantage in case of severe weather.

C. A. D.

Macon, Ga., Jan. 12.

Aralias.

These include many very handsome foliage plants of moderate growth, several species of which may be classed among available plants for decorative work.

The aralias are a widely spread family, representatives being found in many parts of the globe, and in consequence we find widely different treatment necessary for the various species that are used for ornamentation, at least in regard to the degree of heat required, and also in methods of propagation.

In the matter of soil most of the species are not specially fastidious, providing it is not of too heavy a character, and therefore a moderately rich, sandy mixture is found to give a good result in most cases.

As the species to which reference will be made are with one or two exceptions of

FANCY CALADIUM.

comparatively dwarf habit, it will be found best to renew the stock from time to time in order that nicely furnished young plants may be had, say in 4 to 6-inch pots, these being the most useful sizes for window boxes and table decoration.

Probably the most useful, and certainly one of the most elegant, is *A. Veitchii*, a South Sea species now well known in commerce. It is of slender habit and bears quite large, though finely divided digitate leaves, the latter being dark green on the upper side and dull red beneath.

Unfortunately *A. Veitchii* is a very slow rooter, and grafting is usually resorted to as a means of increase. *A. reticulata* being considered the best stock to use for this purpose, though if the latter species is not at hand *A. Guilfoylei* will answer very well.

Another handsome species of somewhat similar characteristics to *A. Veitchii* is *A. elegantissima*, which also has digitate leaves and very narrow leaflets, the latter being brownish green in color with a light colored midrib. This species is also best increased by means of grafting, and when grafted low on the stock makes a very graceful little plant, though possibly not able to endure quite such hard usage as the first named.

A. Guilfoylei is another warm house species from the same quarter of the globe as the preceding, viz.: the South Sea Islands, but is a much stronger grower. The leaves of *A. Guilfoylei* are pinnate, the leaflets being quite broad and margined with cream color.

This is a decidedly handsome plant and of rapid growth, and has the additional qualification of being quite easy to increase by means of cuttings, single eyes with a leaf attached usually rooting in a few weeks if placed in a propagating frame.

A. filicifolia is also a strong grower,

and in habit resembles the last mentioned, but its pinnate leaves are without variegation, being light green in color and the leaflets much cut. This may also be readily increased by cuttings, and when nicely grown is a very pretty and serviceable plant.

A. leptophylla is another of the older species that deserves a place, its compound leaves having long narrow leaflets that are more or less pendent.

The leaves of this species are dark green and the stems more or less mottled, the habit of the plant being naturally graceful, and though not extensively grown, yet deserves more general recognition. Among the cool house sorts the very well known and popular *A. Sieboldii* stands first, and deservedly too, this being one of the most satisfactory house plants, and apparently capable of withstanding as much hardship as an aspidistra.

The best means of propagating this species is by seeds, these being freely produced on an old plant, and as freely germinated, and seedlings make more shapely plants than those secured from cuttings.

Some of the variegated forms of *A. Sieboldii* are also very handsome and valuable for decorating, as they appear to be almost as tough as the type.

A. papyrifera, the plant from which the so-called "rice paper" of the Chinese is made (the pith being used for this purpose) is also a useful plant, though the foliage is not so tough and hard as that of *A. Sieboldii*, still *A. papyrifera* finds a good opening in foliage beds during the summer, where its noble foliage makes a good contrast with finer leaved plants.

This species is perhaps the easiest of all to increase, not only by means of seeds, but also by root cuttings, the latter forming plants as readily as bouvardias if put in sandy soil and placed in a moderately warm house.

Both of the last mentioned species are

also known under the generic name *Fatsia*, and may perhaps be more easily recognized by some reader under that title.

The few examples to which attention has been called in these notes do not by any means exhaust the list, there being a number of more recent introductions that also possess great merit, for instance, *A. Chabrierii*, *A. Kerchovei*, *A. Victoria* and others, but these are not as readily procured as those formerly referred to and possibly have no greater decorative value to the ordinary florist. W. H. TAPLIN.

Fancy Caladiums.

These are very useful indeed for conservatory decoration and when judiciously placed among small palms and ferns are very effective.

The illustration is from a plant of the variety *Bellini* in a 4-inch pot, only six weeks after the starting of the tuber. It was grown at the greenhouses at Garfield Park, Chicago. The tuber was three years old.

New York Floral Notes.

White lilacs have appeared, are very expensive, and are very beautiful. They charge \$3.00 for a small bunch of these at the best floral shops on Fifth avenue and Broadway. Tulips have also come in of two colors, the common yellow tulip and the Cottage Maid, which is always a favorite, especially with young ladies.

Mrs. Odgen Mills gave a ball at her residence on the 12th and Mr. Hall, of S. J. Burnham & Co., arranged the decoration, which was greatly admired. The pictures were all removed from the parlors, and plaques were inserted in their places, which were round and square, and were composed of adiantum and choice ferns with cattleyas placed upon them so as to show the various colors of these flowers. These orchids were a remarkable display of cattleyas, and their arrangement was very fine. The favors were fans brought from Europe last summer by Mrs. Mills herself. There were two hundred bunches of violets, the seventy ladies invited. These were placed on trays for the ladies to help themselves. Mr. Hall also used a considerable number of the Laing rose.

A few Dutch hyacinths have appeared. These are a very handsome variety, and of a rich purple color. They are extremely handsome mixed with the daffodils that are now freely used by all the florists, and were seen in great beauty at the second Patriarchs' ball, when the Kinder Co. made fine decoration at Delmonico's. The Patriarchs' ball has this winter shown many Spring flowers, which the ladies attending have seemed to prefer. In fact, they have seemed to be Mr. Merritt's craze.

A new basket called the four-leaf clover basket, which usually appears on a pedestal, has been ordered freely of the Hanft Bros. This basket has had a great run, and is certainly a very fine ornament if it is properly arranged to show the shape of the basket. Mr. Hanft had an order for five of these baskets which cost \$100 each, but they take a great many flowers to fill them, and these must all be very choice. The basket is painted a remarkable blue, and is well suited to show off the colors of fine flowers. This firm got up the decoration for the Arion Club House ball which occurred on Saturday evening last. The lanterns on the prominent chandeliers were twined with fans, and flowers were interlaced throughout the garlands which bound these to-

gether. Considerable Florida moss was used in this decoration.

Alexander McConnell is preparing the decorations for the Old Guard ball, which will take place on the 22d inst. at the Metropolitan Opera House. This will be decidedly a green decoration, as there will be a great deal of laurel used, and numberless palms. There will be a forest scene on each side of the stage, and near the proscenium boxes will be cannon covered with low plants. The only flowers used will be bunches of American Beauty roses at each side of the stage, which will be four feet in height.

C. L. Doran made the decoration at Mrs. William T. Draper's dinner, which was a large basket of adiantums and American Beauty roses, and a large one of these flowers for each lady. He made a boutonniere, which was composed entirely of carnations, placed seven in a bunch, and put very close together without any foliage. This is a very pretty way of dressing carnations for boutonnieres. At Mrs. Capt. Cook's reception on Monday afternoon, there were two large baskets of American Beauty roses placed on pedestals, and the mirror in the house, which is on the side of the parlors, was decorated with lilies and roses.

Jan. 17. F. A. BENSON.

Specimen Plant of Candytuft.

The accompanying illustration is from a photograph sent us by Mr. Emil Glauber, Montclair, Colo., the grower of the plant shown. He says the spikes measured from four to seven inches in length. The plant shown is certainly very effective as a pot plant, and shows the possibilities in this direction with this plant, so useful at certain seasons for cut flowers, but rarely grown as a pot plant.

New York.

Business better and prospects much brighter. Flowers plentiful.

The Florist Club has secured the Lenox Ice-cream, Madison Ave. and 59th St., for the purpose of giving a flower show the week commencing April 7. A very influential committee has been appointed and great interest is being taken by all concerned. The building is new and especially adapted for exhibition purposes. The large hall is completely round and beautifully decorated with carvings and the high dome is composed of a fine shaded glass that shows everything off to advantage. There are several large hallways that could be used for hardy shrub decorations, and small rooms where exhibitions of house decorating can be given. It is expected that there will be great competition among the retailers at this show.

Peach, apple, quince and forsythia blossoms are used extensively just now in decorations and they are a great attraction.

Lilac is plentiful and selling well, much of it being used as plants in decorating.

Lilium Harrisii are very fine this season. There are also some fine spikes of *L. auratum* to be seen around. Asparagus is very popular this season, being preferred to smilax for fine work.

Acacia has made its appearance and is as usual quickly disposed of. *Ericas* and *epacris* are here with "old country" visions about them. Freedman, of Long Island, has a fine collection that is in bloom at present and a visit to his place reminds one of Burn's "Land O' Heather."

There are many new carnations out this season. Carnations were never so

plentiful, and are on the whole very fine.

The following varieties have kept the lead here for general trade: Lady Emma, Hinz's White, Crimson King (improved), Buttercup, Grace Wilder and Hindsdale; while fancy trade has chosen Alexander, Harrison's, Tidal Wave, Andalusia, Lizzie McGowan and Shaefer's.

Perhaps the handsomest bouquet carried here this season was recently made by Klunder, for a society belle, and cost \$75. It was composed of very light shaded cattleyas and phalaenopsis, asparagus tenuissimus holding the flowers apart, whilst very delicate fronds of *A. Farleyensis* crept from between the phalaenopsis. Around the outer edge between the cattleyas a velvety lavender colored ribbon was interwoven. The handle was wrapped in lavender ribbon, whilst a large bow of broad (8 inch) ribbon of the same color, hung from the front. It was described as "a dream of loveliness."

It is said on good authority, that Mr. Frank Hunter, the wholesale florist, has leased the Buchanan store, 37th St., and Fifth Ave., for a retail flower business.

JOHN YOUNG.

Boston.

The month of January up to present time has been an unprecedentedly dull period for the cut flower trade. Never before has the price of roses been so low or the demand for them so light in mid-winter. Lent coming in so early as it does this year makes the situation doubly unfortunate for the rose growers.

There has been very little demand for any thing in fact. Violets dropped to half price, carnations have been offered in large quantities at low prices although they have not suffered as much as the roses and violets. The weather has been reasonable and wintry enough to have brought about better results, and everybody is seeking for the cause of the break. Bulbous stuff is not over plenty. Tulips which sold very poorly after Christmas are selling rather better, and Roman hyacinths have somewhat recovered from the depression. Freesia is very abundant and the market is badly overstocked with it. Among the novelties are English primroses, gloxinias and heath, all of which are coming in in small quantities.

The subject for discussion at the weekly meeting of the Mass. Hort. Society on January 24 was "Roses," the essay being delivered by Mr. J. N. May, of Summit, N. J. Mr. May was welcomed by the largest audience that has been gathered together for years to listen to a Saturday essay. His address was very interesting and drew out a spirited discussion. Noticeable especially was the large number of ladies in the audience. One of the explanations offered for this is that they must have seen a picture of Mr. May somewhere.

All S. A. F. members who ordered and paid for group pictures at the Boston convention who have not yet sent in their names are requested to do so at once to Secretary Stewart. Please state whether it was the Hayes or the Humewell group which was ordered. Arrangements are being made to have all these orders filled. The man who took them has proved to be untrustworthy.

W. J. S.

Toronto, Ont.

The Gardeners' and Florists' Club is getting down to business now in the matters of receiving the Society of American Florists in August next and the flower show to be held at the same time.

It is possible that the latter will be conducted both by the club and a society which has for years acted as a horticultural society; this matter has, however, not yet been finally decided, so that though we do not expect to be able to give our visitors such a treat as they had at Boston last year we think some of them will be very likely quite as much surprised to find us so far advanced in this "wooden country" as the Executive Committee of the S. A. F. were.

Some injustice was done to Messrs. Spears & Mustor, (Deer Park, Ont.,) in the accounts of the banquet to the S. A. F. committee in their not being mentioned as having supplied some of the roses used for the table decoration. Messrs. S. & M. really had there some of the best Brides and Mermets it would be possible to find on this continent. Mr. Dale's (Brampton, Ont.,) Woottons too were hardly done justice to in the papers, but you will probably hear more about them from other sources.

Can any one tell me what is the matter with *Tradescantia discolor*, a decorative plant? Is it too easy to grow? I came across it the other day after having nearly lost sight of it for years. E.

Washington.

The demand for cut flowers during the present month has been very active, but owing to the bright sunny weather the supply has more than equalled the demand and prices have not ranged as high as they did last year under a less favorable sky.

Of other receptions the recent dinner at the White House given by the President to the Cabinet was the most noteworthy. Symbolical and set pieces have been banished it would seem from the dining table this season. On this occasion the double I shaped table had at each end two superb plants of *Cypripedium insigne* so trained as to completely hide the pots, midway between large clusters of *Bon Silenes* as contrast. Lengthwise upon the center of the table was massed a row of eight plants of the same beautiful orchid, the pots completely hidden by foliage, having the appearance of a densely packed bed of bloom, there being some two hundred perfect flowers in this piece alone. The two great mantels at each end of the room were banked, the one in white carnations and hyacinths, the other in *Meteors* and red carnations, while portions of lace were strung with smilax and asparagus.

The most lavish floral decoration which has been witnessed here for many a year at a wedding was presented at the recent Andreuviel Divonne nuptials. The church, which is one of the largest here, was literally converted into a garden of lilies and palms and vines. The sanctuary was draped in white bobinet pleated with a wide frieze around the top; from this trailed artistically *Asparagus tenuissimus* and smilax. A cordon of lilies of the valley extended the entire length of the shelving of the altar. Palms were tastefully placed at intervals from the lowest step in front of the altar to the uppermost plateau. Garlands of smilax and asparagus extended entirely around the inner walls of the church. Great plaques of palmetto leaves were appropriately arranged between the windows and graceful bright foliage plants served in every available space to impart attractive variety.

At the house of the bride where a wedding breakfast was served, the floral decorations were no less elaborately

SPECIMEN PLANT OF CANDYTUFT

orate, lilies, callas and palms predominating. Every one remarked upon the exceptional display of floral skill and the profusion of superb blooms. There could not have been less than a thousand lilies and several thousand yards of smilax and asparagus required to carry out these decorations.

The annual expenditures by the federal and local authorities upon the parks and public grounds of the National Capital aggregate upwards of \$200,000, distributed according to last year's appropriations as follows: Improving Capitol grounds and terraces, \$67,000; D. C. Park Commission, \$20,000; Botanic Garden, \$18,893; Agricultural Department Gardens, \$18,920; Improvement and care of Public Grounds (approximated), \$80,000, exclusive of office expenditures.

The Department of Agriculture expended in addition for purchase and distribution of seeds \$100,000, for the maintenance and improvement of a Zoological Park \$92,000. And for the purchase of land for a public park in the suburbs along Rock Creek, \$1,200,000 were appropriated.

Baltimore.

"Baltimore!" do I hear you say Mr. Editor? "Present, sir! Present and booming." Not only because we are to have rapid transit to bind our East End and West End together by a line of cable cars; nor that we are to have a ship canal that will make us 1,000 miles, more or less, nearer Liverpool than any other American port; nor that our farmers are preparing to plant the bottom of the bay and keep up our reputation as the headquarters for bivalves; nor that we are getting so far ahead in a floricultural

way that one of our suburbs, Washington, has a florist club of its own and is making a name and reputation only inferior to our own; but more than all these, and proving more clearly that we are in the fore front of progress is the contrast between the reports of our florists and growers and the published reports from the other three or four big towns on the continent for the past few weeks.

I read from New York, "Business for the past week has been very quiet;" from Philadelphia, "Trade for the past week has been very dull;" from Chicago, "Trade seems dead;" from St. Louis, "Trade is exceedingly slow;" and in comparison with these I take the report of the manager of the Baltimore Florists' Exchange, "Trade has been very good; Romans and callas the only slow stock." Is not that cause for jubilation? Particularly when we consider the increase in the amount of glass that is being run for our market during the past twelve months.

One of our leading florists said last week, "Christmas trade was up to last year but New Years was way ahead." Another said trade was much the same as last year, about \$50 advance only, and taking the whole of the past four weeks, from Christmas to the 23d of January, there does not seem to be one voice against the general verdict that trade is good, alive and booming. "There has been twice as much demand for orchid flowers in our market this year as last," says an orchid man. "Violets sell like hot cakes," says a violet grower, and so it goes all along the line, and the exhilaration of the scene is made greater when he thinks "Now surely after all this our men will invite the S. A. F. next time."

There is one suggestion that he hopes the gentlemen and ladies who have charge of the windows of our flower stores will permit him to offer, it is "Don't let the windows of dry goods and millinery, clothing and toy stores form such really artistic displays; or, if you can't help it, surpass them." If in any city it is the practice to make a really drawing picture of a florist's window and change the same with anything like the skill and taste displayed by some other trades, we hasten to acknowledge our inferiority to that city in that respect. It is an anomaly that the business that depends entirely on decorative effects should exhibit little or nothing in that line, a few roses and other flowers in bunches taking the place of what might easily be made a picture of an elegantly decorated drawing room window, or a model window garden, or be filled with a scene from any one of the thousand festive occasions in human life where flowers and the skill of the florist seem indispensable. If you have taste brethren and sisters of the retail business, show it. It can not be that you are restricted to one way of decorating, and are afraid of giving it away to competitors, nor that you are afraid of the expense, which need not be excessive. It pays those who do most of it in other trades. It will pay you. Try it.

MAK.

News Notes.

WASHINGTON HEIGHTS, ILL.—B. HUSTLER has retired from business. Please erase his name from the directory list that no catalogues may be wasted.

NEW BEDFORD, MASS.—The Gardeners' and Florists' Club is already considering the items of a premium list for a chrysanthemum show next November.

BAY CITY, MICH.—The Bay County Horticultural Society was organized here January 16. The officers are as follows: John Irvine, president; Ernest Frank, vice-president; T. J. Cooper, secretary; C. W. Hull, treasurer. Trustees—William Reuther, E. R. Phillips and Charles Breitmeyer. Meetings will be held the first Thursday of each month.

SPRINGFIELD, MASS.—The Amateur Horticultural Society will hold a rose and strawberry exhibition on June 16 and 17. Miller Brothers & Chapell is the new firm name of Miller Bros. Willis L. Chapell has been a member of the firm for over a year but the firm name has not been changed until this week. Business here is good, better than at any time since Christmas. Roses are good and plenty, violets fair, carnations fine but not plenty, bulb stuff good and stock full with such as jonquils, Romans, paper white, freesias and a few tulips.

PITTSBURG.—A meeting of the Pittsburg and Allegheny Florists' and Gardeners' Club was held the evening of Thursday, January 22. Rules and by-laws were adopted and over 100 members were enrolled. Preparations for an exhibition are already under way. There were some very interesting discussions and lively debates at the meeting. The name of the secretary of the club is Geo. Oesterle and not Asterley as given in last issue of the Florist. G. Ludwig's greenhouses in Allegheny were destroyed by fire the night of January 21. The houses were partially insured. Loss on stock was about \$1,500. The fire originated around the heating apparatus.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advts. not admitted under this head.

Per dozen, \$4.00. Per hundred, \$25.00. Per thousand, \$200.00.

Special rates given for quantities from 5,000 and upwards.

JOHN H. SIEVERS,

25 Post Street,

SAN FRANCISCO, CAL.

SPECIAL FOR FLORISTS.

About February 1st, we shall print a large edition of circulars illustrating the Japan Snowball and the Red-Flowered Dogwood.

For orders for circulars received previous to going to press we offer them at very low prices. Circulars have your name and address on them; Sample and prices on application.

Every florist can sell a large number of these beautiful shrubs at very little expense, and the profit on them will more than pay for the effort. The following from a New Jersey customer speaks for itself:

"I am meeting with good success in the sale of the JAPAN SNOWBALL, and the prospects are that I shall send you a large order for them. Have sold so far seventy-three plants."

MEEHAN'S NURSERIES, STATION "G" GERMANTOWN, PHILA.

FOR SALE.
A first class florist establishment near San Francisco, California. Fine stock. Good trade. Nine greenhouses; modern appliances. Terms reasonable. For particulars, address EMORY E. SMITH, 321 Market St., San Francisco, Cal.

A BARGAIN.
Rare chance for an enterprising florist, having some capital. Large hot bed. Leading shipping trade in S. E. Ohio. Sales during first year will more than equal the purchase price. Land for sale or lease. Four houses stocked and equipped. Must sell for good reason.
E. L. KOETHEN, Zanesville, O.

FOR SALE.
The Walkerton Greenhouse and Market Gardens. These premises consist of 34 acres of first class land with 250 small fruit trees, a neat two-story brick dwelling, two greenhouses heated with hot water, with all modern improvements; well stocked and necessary hotbeds. No opposition nearer than 50 miles distant. Also 61 acres of highly cultivated good land under lease for years on good terms, on which are 1 acre of young bearing raspberries, and 1 acre of strawberries. Apply to W. W. JENNINGS, Ford River, P. O., Mich., or SHAW & SHAW, Walkerton, Ont., Canada.

—ROSES.—
We are now taking orders for delivery after March 1st, on the following varieties, 3 inch pots: Perles, Nipheas, Souv. d'un Ami, Cook, LaFrance, Bennett, Brides, Mermel, Woolton, Heste and Beauty. E. G. HILL & CO., Richmond, Indiana.

THE NEW ROSE

WABAN

This very valuable rose originated at the Waban Conservatories of E. M. Wood & Co., Natick, Mass. It is a *SPORT* from Catherine Mermet and identical with that variety in every characteristic, excepting color, which is a rich, deep, *BRIGHT PINK*; it sustains the same relation to its parent as Duchess of Albany does to LaFrance. The only objection to C. Mermet is its frequently pale, insipid color in cloudy weather; experience has shown that the **WABAN** retains its deep rich color in all kinds of weather; it will, without doubt, prove to be as valuable as *THE BRIDE* which is also a sport from the same magnificent variety.

IT HAS ALREADY RECEIVED THE SILVER MEDAL

of the Massachusetts Horticultural Society; of the Pennsylvania Horticultural Society, and *Certificate of Merit* from each of the Societies in this country and Canada where it has been shown,

Ready for Distribution on April 15th, 1891.

Orders booked now, will be filled in strict rotation.

Extra good plants from 2½-inch pots.

Crude Oil for Fuel.

I would like to ask of the readers of
your paper why crude oil is not used
more for fuel for heating greenhouses.

It would seem that at the price of 50 or
60 cents per barrel it would be much
cheaper and save hard work and keep
an even fire.

Will those that have had experience
give their views in regard to it.

Medina, O. J. S. WARNER.

[The results of several experiments have
already been given in these columns.
That there are great possibilities in this
direction is quite probable, and some are
already using crude oil with satisfactory
results. Still, as several accidents and
fires have resulted from its use, others
are naturally timid about experimenting
with it. Again the amount of machinery
necessary to properly feed the burner is
quite a drawback. With all the burners
which have been brought to our atten-
tion an additional boiler is necessary to
supply steam to feed through the burner
with the crude oil. Several attempts
have been made to devise a simple and
inexpensive burner, but if success has
been attained we are as yet unaware
of it.—Ed.]

THOSE ISSUING catalogues and trade
circulars should note the changes in our
directory, which are given in our news
columns.

IMPORTANT TO ALL FLORISTS.

Our new trade list of 50 pages and our descriptive catalogue of 100 pages is
now being mailed to you. Should you not receive a copy within a few days,
notify us and we will send you one.

Without any desire to brag we assure you we have the largest and best col-
lection of Chrysanthemums in the country.

All stock is bloomed before propagated from. Our list contains over 600
varieties. We also publish a list of synonyms in our catalog.

Pamphlet of "Summer Flowering Bulbs" 20 pages mailed on application.
Price \$3 per 100. Our name does not appear in the pamphlet, therefore it is
highly valuable for those having a counter trade. Our list of dormant bulbs
is the largest and finest of any in the country.

We have so much of interest to florists and others in our catalog that we
cannot begin to mention any.

Blanche Ferry Sweet Pea, proved of great value last year as a cut flower.
We have a large stock of fresh seed at 10 cents per oz.; \$1.00 per lb.

You will bear in mind we told you last year that Chrysanthemum V. H.
Hallowack was a good one. You will hear from this later on. We also recom-
mended Charity and White Cap on our last years set as being particularly
valuable for florists' use. Prices in quantity on application.

CUT SMILAX.
I make a specialty of Smilax, and am prepared to fill orders promptly. Price, 30 cents per string till May 1st. Quality A. **JOSEPH E. BONSALE,**
Telephone No. 15. 308 Garfield Ave., Salem, Ohio.

Will be ready in about 10 days. We have said before that our specialty in this trade has become fairly well known by the phrase we have occasionally used

ALL FLORISTS' STOCK IN SEASON.

We have advantages in this line, through considerable experience, knowledge of best sources and place us in a position to **save you money.** If your address is not on our books we would be very glad to receive your business card for this **BOOK.**

Home Grown, Honest, Reliable.

I offer you my Vegetable and Flower Seed Catalogue for 1891 **FREE.** Note the immense variety of seed it contains, and that all the best novelties are there. Not much more show about it (you don't plant pictures) but fine engravings from photographs of scores of the choice vegetables I have introduced. Would it not be well to get the seed of these from first hands? To be the best firm in the United States making mail and express business a specialty proves reliability. Honest and honorable dealing is the only foundation this can rest on. My Catalogue is **FREE** as usual. A matter on second page of cover will interest my customers. **J. I. H. GREGORY & SON, Marblehead, Mass.**

— ORIGINAL AND LARGEST GROWERS OF —

LILIUM HARRISII, BETTER KNOWN AS THE BERMUDA EASTER LILY.

— BULBS NOW READY FOR DELIVERY. —

THE BEST IN THE WORLD FOR FORCING FOR WINTER FLOWERS. WE OFFER ONLY STRONG FIELD-GROWN BULBS FROM OUR OWN GROUNDS IN BERMUDA.

COPYRIGHTED, 1890, BY F. R. PIERSON, TARRYTOWN, N. Y.

From a photograph taken the week before Easter, 1890, showing a view in one of our new iron greenhouses, here at Tarrytown, 20 feet in width by 140 in length, of a crop of *Liliium Harrisii* in full bloom. This house produced over 15,000 flowers for Easter.

This is not only the best by far of all lilies for winter blooming, but it is one of the most profitable flowers that can be grown by florists. It is very easily handled, and the flowers being especially effective for decorative purposes, always command large prices. From its name some have thought it was a bulb for florists' use for forcing for the Easter market only. This is not exclusively so; it derives its name from the fact that, in Bermuda, grown in the open ground, it blooms at Easter time—hence the name "Bermuda Easter Lily"—but by growing it in this country in the greenhouse, with successive lots, it can be had in bloom all the winter from early in December until after Easter; in fact, by special culture, all the year round, or as long as cut flowers are in demand. The fact that it can be forced into bloom by the Christmas holidays adds particularly to its value, as it fits in at a time when flowers are usually scarce and in great demand at high prices, but to accomplish this the bulb must be potted early in August, something depending upon after treatment and the temperature the bulbs are grown in.

For this purpose our Bermuda-grown bulbs are indispensable, as in Bermuda the bulb reaches its highest development, and ripens off perfectly, and is ready for shipment usually by the middle of July—before bulbs in our own country have hardly begun to make their growth. Our bulbs being grown in the open ground, in a climate naturally adapted for their perfect growth, are particularly strong and healthy at any time.

The extent to which this Lily is being forced for winter flowers will be shown by a sale made by us to a large New York grower, who purchased 20,000 bulbs for his own use. We hear it said occasionally that *Liliium Harrisii* flowers will not keep—this is owing to improper handling. If cut as soon as open they can be kept for more than two weeks, if in a proper place. It bears shipping splendidly, as the two following letters will show. These were written acknowledging the receipt of flowers shipped last Easter.

J. L. Russell, Denver, Colo., writes: "The Lilies came in excellent shape. I don't think I lost one; it is a pretty good recommendation for your packing." The Fort Worth Nursery Seed and Canning Co., Dallas, Texas, writes: "The Lilies arrived in perfect condition, and we must compliment you on your packing. We would not have thought they would have carried so far packed dry."

THIS VALUABLE LILY IS OUR SPECIALTY.

We grow the bulbs by the acre on our own grounds in Bermuda. We were the first to grow it in large quantities and to offer it at reasonable prices, and we have always been recognized by the trade as HEADQUARTERS FOR THE BERMUDA EASTER LILY; supplying the trade as we do, both in this country and in Europe, and we hold by far the largest and the controlling stock of the genuine variety in the market.

The extent of our operations in this bulb alone will be best understood when we state that we expect to sell from OUR CROP OF 1890, over

— HALF A MILLION BULBS. —

Be sure you get the genuine *Liliium Harrisii*. In order to secure "the true variety," purchase your Bulbs from original stock, which is known to be pure. The value of this Lily has led unscrupulous or ignorant parties to plant *L. Longiflorum* in Bermuda, planting it with *Harrisii* to increase their stock rapidly when *Harrisii* was very scarce, thus mixing the stock irretrievably thereby rendering it absolutely valueless for forcing and we have known instances where these mixed bulbs have been sold to large growers as the genuine variety, where large loss has resulted and dealers should look with suspicion on bulbs offered at prices less than market rates, as the supply has never yet met the demand. "Mixed Bulbs" only being offered at reduced rates.

Large growers or dealers in this bulb should write us for special prices, stating quantity of bulbs desired, and we will give lowest estimate on the same by return mail.

F. R. PIERSON & CO., TARRYTOWN, NEW YORK, U. S. A.

OUR FREESIA BULBS ARE NOW READY FOR DELIVERY. They are of unusually fine quality, nearly twice the size of Bulbs usually sent out. Intending purchasers should write us for samples and prices, stating quantity wanted.

Cost of Water Supply.

Will the readers of the FLORIST who use city water kindly give me information on the following points:

Do you use a meter, and if so how much do you have to pay per thousand gallons? How much water do you average for each 1,000 feet of glass? How many thousand feet of glass do you have to have in order to get the rate made you? Does the water works have to pump the water from wells, or have they a natural supply by storing? When no meter is used what rate do you have to pay?

I believe that answers to the above questions and any other information regarding this matter will be of considerable interest to many others with as well as myself.

Chatham, N. Y.

R. E. SHUPHELT.

Failure of Liliun Harrisii.

What is the cause of Liliun Harrisii bulbs not starting, or if they do start, making little short growths or leaves, but throwing no main stem? I bought 100 9 to 12-inch bulbs and only 65 started up into good growth and threw up a bloom stem. The smallest bulbs in the lot started, but the largest did not. Could the seller of the bulbs know that the bulbs would not bloom? Will some reader of the FLORIST please try to throw some light on the matter.

A. C.

Rooted Cuttings Carnations.

We offer **EDELWEISS**, a pure white sport of Chester Pride for the first time this season, @ \$1.50 per dozen; \$10.00 per 100. Send for circular of leading varieties and several new seedlings of merit.

WINTER-FLOWERING CARNATIONS
FOUR GRAND NEW VARIETIES.

You cannot afford to pass by without trying our seedlings of merit for 1891; there is more profit in growing fine, fancy flowers every time; and in **GOLDEN GATE** (yellow), **WM. F. DREER** (rose pink), **J. R. FREEMAN** (cardinal crimson), and **CONSTANCY** (scarlet), you have a good range of color in the most perfectly shaped flowers and productive of bloom.

Prices, Golden Gate, \$2.50 per dozen; \$20 per 100. Dreer, Freeman and Constancy, \$2.00 per dozen; \$15 per 100. On an order at one time for 100 plants of each variety or 400 plants in all, the price would be \$50; or half the amount, \$25. Sample flats of the four varieties will be mailed on receipt of \$5 cts.

CHAS. T. STARR, Avondale, Chester Co., Pa.

LIZZIE MCGOWAN THE NEW WHITE

CARNATION. ROOTED CUTTINGS, \$12 per 100, or \$100 per 1000.

NEW CHRYSANTHEMUMS.

MILLER'S "WORLD'S FAIR SET."

We have been to great expense, sparing neither time or money in collecting this unequalled set. Characteristic of the leading city of this country, we have named them in honor of our representative citizens:—FERD W. PECK, or GALLIA, and J. V. FARWELL, or W. N. RUDD, were two of the set of six seedlings that took the \$100 prize at Indianapolis; S. W. ALLERTON and GEO. R. DAVIS were raised by Monahan of Philadelphia, who has originated some of our finest varieties. CYRUS H. MCCORMICK was raised by Jameson, and is one of the finest of the present year's novelties. The remaining eight are the XXX selections of 1800 seedlings that were raised by the leading grower of this country. In comparing

them with the different sets sent out this year we unhesitatingly say that they are second to none.

LYMAN J. GAGE, a grand late white.
GEO. R. DAVIS, ox blood red, Wheeler type.

J. V. FARWELL (W. N. RUDD), Lavender without, rosy violet within, a fine keeper.

CYRUS H. MCCORMICK, Dark deep yellow, shaded bronze red.

ANDREW McNALLY, Crimson scarlet, fine for exhibition.

POTTER PALMER, White seedling from L. Canning, very large.

FERD W. PECK (GALLIA), Rosy pink, fine exhibition variety.

CHAS. H. WACKER, Crimson scarlet, profuse bloomer.

ROBT. A. WALLER, Chamoise yellow, extra.

CHAS. T. YERKES, Bright scarlet and gold, fine cut flower variety.

S. W. ALLERTON, An immense white, fine for pot culture.

MARTIN A. RYERSON, An improved Mrs. Frank Thompson.

FRED S. WINSTON, Cardinal and Indian red of the Carnegie type.

SET OF 13 FOR \$6.

Orders booked for the above and also 100 of the leading exhibition and cut flower varieties to be delivered early in January. Send for descriptive list. "Get the best, grow the best, and keep up with the times," is our motto.

Orders booked for the PINK STRICH PLUME CHRYSANTHEMUM, LOUIS BOEHMER, at market price.

GEORGE W. MILLER, 1748 North Halsted St., CHICAGO.

DE WITT BROS.,
BRISTOL, PENNSYLVANIA

Chicago.

At the last meeting of the Florist Club the Horticultural Society's project of a spring exhibition was discussed at length. It was decided that if an exhibition was to be given the coming spring it should be held as early as March 10 or not at all. The committee from the Horticultural Society was present at the meeting and were advised as to the sense of the club upon the matter. In order to facilitate matters in case the Hort. Society decided to give the exhibition, the club appointed a committee of three to confer with the committee from the Hort. Society and to assist in the preparation of a premium list which would best suit the circumstances and the season of the year. Business is better than at last report. The supply has also shortened up to some extent and prices have stiffened.

There promises to be quite a turnout to the Florist Club's entertainment to-morrow (Friday) evening. It will be held at Grand Army Hall, northwest corner of Dearborn and Adams streets.

Tom Rogers, the "Prince fakir" has the windows of his store plastered with a remarkable collection of placards. Among them are the following: "Violets 25 cents a bunch," "Carnations 25 cents a dozen," "No World's Fair prices," "My profits are large, my expenses small," "The hornet's nest," "No more high prices." He wants to be careful that he does not set down on his own hornet's nest.

Kidwell & Moore, 37th Court and Butler street have leased their greenhouses for five years to Herman Shaw, formerly with S. Nelson & Son.

Louis Gresenz has sold his interest in the cut flower commission firm of Gresenz & Harms to his former partner, E. J. Harms.

"Nothing Succeeds like Success."

S. A. F. ATTENTION.

NOTICE RELATIVE TO THE AWARD FOR STANDARD FLOWER POTS.

The following articles not being admissible in the reading columns we present them to the readers of the Florist in this form, wishing to verify the statements already made by us.

A. H. HEWS & CO.

TO THE EDITOR OF "THE AMERICAN FLORIST":

In the interest of justice and fair play, I would like you to insert the following, relative to the award on flower pots. I am a potter by trade, and consider myself an expert. I examined the pots thoroughly as exhibited by Hews & Co. and Whilldin & Co., and under oath I wish to make the statement that I consider the statement made by Mr. Hews relative to the sizing of pots after they were made, by the parties receiving the award, a correct one.

G. W. MILLER, 1748 N. Halsted Street, Chicago.

GEORGE W. MILLER, of Chicago, a florist, personally well known to me, Nicholas Coones, a Notary Public for Cook County in the State of Illinois, personally appeared before me and on his oath says that he personally examined the pots above mentioned and considers the above statement herewith annexed to be in his judgment correct.

Subscribed and sworn to this 15th December, 1890.

NICHOLAS COONES, NOTARY PUBLIC.

I, W. P. BROWN, of Cambridge, State of Mass., do under oath make the following statement: I have been connected with the manufacture of Flower Pots for the past seventeen years, and consider myself an expert. I thoroughly examined the pots that received the award at the late exhibit of the Society of American Florists and hereby affirm that the statement made by Mr. Hews, relative to the sizing of pots after they were made, is a correct one.

WM. P. BROWN.

Then personally appeared before me, the above named William P. Brown, and took oath that the above statement made by him is true.

CAMBRIDGE, DEC. 27, 1890—I hereby certify that I have known William P. Brown for some 15 years, and believe him to be a man who would not make a false statement.

IMPROVED FARM AND GARDEN TOOLS FOR 1891.

BETTER, Both Horse and Hand, THAN EVER; better and more money saving. We can not describe them here, but our new and handsome catalogue is free and interesting. A goodly number of new tools will meet your eye there. Among these: Gardener's Harrow, Cultivator and Pulverizer, combined, adjustable teeth; Market Gardener's & Beet Grower's Special Horse Hoe, with Pulverizer, Special Furrower, Marker and Ridger, adjustable wings; Sweet Potato Horse Hoe, four tools with vine turner; Heavy Grass Edger and Path Cleaner; new Nine Tooth Cultivator and Horse Hoe combined; Special Steel Leveler and Pulverizer combined; all interesting, nothing we have ever made so practical or perfect. Some improved things too are grafted upon our older favorites. A capital LEXER WHEEL, instantly adjustable for depth, is a great feature; put on all 'ol goods unless ordered otherwise. Now have our Hand Seed Drill been forgotten in the march of improvement, nor our Double and Single Wheel Hoes, Garden Plows, Grass Edgers, etc. Some of them are greatly altered for the better; yet do not forget that no novelties are adopted by us without actual and exhaustive tests in the field. We therefore guarantee everything exactly as represented. Send for Catalogues now.

Foreign Notes.

MR. GEORGE GORDON succeeds the late Shirley Hibberd as editor of the London *Gardeners' Magazine*.

ANNOUNCEMENTS have already been made of fifty three flower shows to be held in various parts of England during 1891.

THE ANCIENT Society of York Florists, the oldest in England, having had an unbroken existence of over 100 years, held its annual festive gathering recently.

THE NETHERLANDS Horticultural Society has announced an orchid show to be held at The Hague next May. The show will be of an international character.

A CHRYSANTHEMUM grower in England who had flowers mysteriously disappear from his plants during the night finally discovered that it was the work of rats who had developed a taste for the flowers.

THE MIDWINTER exhibition of the National Chrysanthemum Society of England was held at the Royal Aquarium, Westminster, January 7 and 8. The display was small owing to the very severe weather.

AN ENGLISH gardener has secured a new race of dahlias remarkable for their dwarf habit. The plants are from nine to twelve inches in height, compact and bushy. They have been given the name "Tom Thumb dahlias."

THE first number of the London *Gardener's Chronicle* was issued January 2, 1841, and in its issue of January 3 last, considerable space is devoted to a review of the work of the paper for the fifty years of its existence.

CHRYSANTHEMUM cut flowers brought very low prices in the London market the past season. During the latter part of November not more than four cents per dozen could be got for good blooms and even in the middle of December they were sold for 10 cents a dozen. These are less than half of the prices obtained the previous season.

A CABLEGRAM under date of January 23 states that for the last six weeks the flower markets of Paris have been practically destitute of blossoms owing to the severe weather, the damage done to the gardens in the environs of the city having been very great. The report states that one rose gardener at Ivry has lost \$20,000 worth of roses and that another at Malakoff places the damage done to his crop at \$46,000 while a third estimates his loss at \$10,000. Other rose growers name proportionately large losses and the total estimated loss foots up to about \$200,000. At the little town of Chevreuse, near Versailles the gardeners report the loss of plants valued at \$80,000, and at other near-by points \$180,000. During these six weeks 2,000 gardeners and their assistants have been out of work.

CAMPDEN, N. J.—Articles of incorporation were filed January 19 by the "Abion Chestnut Co." Its objects are to buy and improve lands for the cultivation of all kinds of trees, fruits or other agricultural products. The capital stock of the company is \$2,500, and the amount paid in is said to be \$1,000. The corporators are John R. Parry, of Parry, N. J.; W. H. Corson, Plymouth Center, Pa.; Edwin R. Bell, Haddonfield; John J. Albertson, Magnolia, N. J.; and Israel Robert, Moorestown.

RACINE, Wis.—F. Fontaine succeeded both the Fontaine Floral Co. and Julius Martins some years ago, and the list as given in the directory is correct, but catalogues and circulars still come to the old addresses. Those having the last two names on their mailing list would save something by erasing them.

CONSHOHOCKEN, PA.—In your directory list of florists here Thomas Wilson should be changed to Edwin T. Wilson.

WE HAVE in hand and shall soon publish a very interesting article on the arrangement of flowers with respect to color.

WE ARE advised by Messrs. Pitcher & Manda, of the United States Nurseries, Short Hills, N. J., that they will give an orchid exhibition at the nurseries February 9th to 14th inclusive.

Carnation Lamborn.

When I wrote the plain, simple article on this carnation which appeared in the FLORIST of January 8th I was entirely unprepared for the cyclone of criticism which meets my eye in the issue of the FLORIST just now received. But as Mr. Lombard says "just and fair criticism helps to greater efforts" I will consider myself on the defensive and reply to his criticisms as briefly as possible. In the first place I will say to Mr. Lombard that the article of mine referred to was as stated at its commencement, a reply to certain letters which I had received, and which the editor of the FLORIST was good enough to allow me to answer all at once in that way. The article was intended as a plain and simple statement of facts as they had occurred to me, I had not the least idea of making a boast that the 10,000 Lamborn flowers that I had gathered, sold, or used in a certain time, was an extraordinary, large, or even an ordinary number to gather in that time, and I will defy Mr. Lombard or any other critic to place a finger on a single sentence in that article which can honestly be so construed. The main point of my article of the 8th was to define, and my chief object was to illustrate as clearly as possible the very different circumstances under which I was placed this year in connection with my business when gathering sufficient Lamborn carnation flowers to meet all the requirements of my business as compared with other seasons when depending upon Hinz's White, and being obliged to purchase large numbers of white carnations between the crops at prices ranging from three to four dollars per hundred. If Mr. Lombard will spare a few moments to compute the difference he will find that it amounts to something more substantial than the difference between mine and an ordinary good gathering of carnation flowers.

But there is another and still more important fact not yet mentioned to which I will call Mr. Lombard's attention, and which I think will entirely change his views on this subject, and which I also think will at once convince so reasonable a gentleman as he appears to be that the idea of boast which he and other critics seem determined to entertain are entirely absent, and that is the fact that during the time my Lamborn carnations furnished me with the 10,000 flowers they

also supplied me with 35,000 cuttings. Now, Mr. Lombard knows perfectly well that every cutting taken from so fine a growing carnation as Lamborn means a flower, and that the 35,000 cuttings added to the 10,000 flowers will count up rapidly in favor of the plants, especially as 15,000 of the cuttings have already been rooted, shipped and converted into cash, and the balance already in the sand, and many of them nearly ready for shipment. Now, I think Mr. Lombard and other critics will agree that if boast was my object I should not have omitted such an important item in my estimate as the 35,000 cuttings. Again my plants were small, so small in fact that when placed in the house but little was expected from them. Mr. Lombard seems to think my statement that my Lamborn flowers netted me \$50 per 1000 is considered a remarkable one by growers around Boston. If my article of January 8 is referred to it will be noticed that nearly all the flowers mentioned were sold at retail in my own store, that it had no reference whatever to prices obtained by growers from the commission dealers. Is Mr. Lombard prepared to say that good white carnation flowers will not command five cents each at retail in Boston?

In reply to Mr. Holley I would say that I think it would be a great mistake to throw out Hinz's White carnation where it does as well as he states he saw it doing with Mr. Rud. of Newark. But Mr. Holley's visit to my place would at once satisfy him that it would be inadvisable for me to grow Hinz's. My explanation to Mr. Lombard should be equally applicable to Mr. Wm. F. Bassett, of Hammon, N. J., and Mr. J. C. Hoag, of Akron, Ohio. They seem to have caught the same idea and set me down as a boaster. They are respectfully referred to the article in question to see if their conclusions are sustained.

H. E. CHITTY.

Paterson, N. J., Jan. 24, '91.

Number of Blooms Cut.

I have been very much interested by the several articles in the issue for January 22 in reference to Mr. Chitty's article in the issue of January 8 on the Lamborn carnation, but it occurs to me that a very important item has been overlooked in the discussion, and that is the number of square feet of bench room the plants occupy. The comparison of records is not fair unless this taken into consideration. And this applies not only to carnations, but to roses and violets. Several of the records given in the FLORIST have been incomplete in this respect. The value of the variety to the commercial grower can best be determined by the returns per square foot of space occupied.

Any one who has grown Lamborn

knows that he can plant almost twice as many of this variety in a given space than of any of the stronger growing carnations. Taking this into consideration, Mr. Chitty's record might show to better advantage. Any one examining the illustration of his new house, will find his Lamborns pretty well budded.

I do not wish it to be understood that I endorse Lamborn, for the contrary is the case, but I mention the point named to show that we can not judge accurately of the productiveness of any variety simply by the average number of blooms cut from each plant, but must have the average number of blooms cut from each square foot of space occupied.

I admit that Lamborn is a fine carnation, but I fail to get as many blooms from it as from an equal space of either Swayne or Silver Spray. As to keeping qualities I consider Swayne far ahead of any other white carnation that we have. Silver Spray has two strong points, long stiff stems and coming more double and in finer form in hot weather than Hinz's White.

I append a record of blooms cut from Wm. Swayne and Silver Spray. My bench of Swayne is still blooming at the rate of 300 or 400 a week, and the plants of Silver Spray are a mass of buds in different stages of development. I expect to cut a larger number of blooms the present month than during any of the preceding months. I will also send you a complete record of my other varieties after the season is over, some time in July:

WM. SWAYNE.

Number of plants, 530; number of square feet they occupied, 308; average plants per square foot, 1.7.

NOTE.—The fractions have been carried out in each case until it required the annexing of two more ciphers, so in each case we can do without the plus.

R. WITTERSTAETTER.

Sedamsville, O.

Keeping Qualities of Lamborn.

In reply to the question asked by G. P. Rawson as to the keeping quality of Lamborn I can say that when shown at the flower show in Orange last November it did not appear to be a good keeper. On the second day of the show it had a stale, droopy look, while Lizzie McGowan was as fresh as when cut, and on the third and last day was still good enough to go to New York for exhibition. A. B.

Carnation Mrs. Fisher.

In issue before last Mr. Holley (page 379) inquires as to the qualities of the above carnation. I have known it during the past three years—since its introduction in fact by Mr. Fisher. I did not, however, commence growing it myself until last year; previous to that, however, I had satisfied myself that it was a carnation of no ordinary merit and I am glad to say that my personal experience of it in my own establishment has greatly tended to advance it in my favor.

I have at the present time a considerable batch of this variety planted both in solid beds and benches, it is in each case giving me equally satisfactory results. It has several sterling qualities which are indispensable in a carnation. First, it is a very good grower. Second, it is very floriferous, and third, the individual flowers are of good size, good substance and can invariably be cut with long stems; add to these good qualities the fact that it stands shipping well (which is more than can be said of Lamborn) and I think your correspondent will be more than justified in giving this variety a fair trial.

For my own part I honestly consider it the best white carnation on the market, if its many good qualities are taken into consideration. It has given me a never ending succession of bloom since the beginning of October, and to quote Mr. Chitty when writing of his pet variety Lamborn, "to look at the bed you would hardly suppose a flower had been cut from it."

WILLIAM NICHOLSON.

Framingham, Mass., Jan. 29.

In an article in your paper of the 22nd inst., Mr. E. Holley asks about carnation Mrs. Fisher. I have grown within the last four years a dozen or more varieties of white carnations, but have not found one that promised as well as the above variety. The flowers are large, full and very fragrant, and from present indications lots of them. One point in its favor is its thoroughly remountant habit. My plants while maturing a good crop of flowers have also grown a still larger crop of buds, which are now coming in without any break in the crop.

J. H. POND.

Foxboro, Mass., Jan. 30.

In your issue of the 22d of January Mr. E. Holley, of Hudson, New York, makes inquiry about Mrs. Fisher carnation. I have grown carnations for twenty years for Boston market, both of the old and new varieties; am this year flowering 2,200 plants of Mrs. Fisher, and have never grown but one variety which can compare with it in size of flower and freedom of bloom, and that, the old Boule de Nègre when it was at its best, fifteen years ago.

F. DONOVAN.

Natick, Mass., Jan. 26, 1891.

Silver Spray and Lamborn.

We still find Silver Spray the best white variety we have ever grown. We esteem Lamborn very highly and get some very fine blooms from it, but can cut about three times as many long stemmed blooms of Silver Spray from the same space and in the same length of time.

GEO. HANCOCK.

Grand Haven, Mich.

The Carnation as a Pot Plant.

We believe that the possibilities of the carnation as a pot plant have not been

fully realized by many in the trade. Plants such as that shown in the accompanying illustration would undoubtedly sell well at good prices and give much satisfaction to the purchasers.

A New Remedy for Mildew and Black Spot.

In looking up the nature of the "sulphur and lime mixture" which has long been used as a remedy and preventive of mildew in greenhouse culture of plants, after consulting every source of information I could, in the various chemistries, encyclopedias of chemistry and encyclopedias within my reach, and finding only brief mention of it I went to the druggist with my query, and he kindly loaned me the United States dispensary for a few hours. In it I found a formula for making the sulphur and lime mixture very similar to that given in Henderson's Practical floriculture, and a description of its use in medicine. The remark that it contained hypo sulphite of lime as the active element led me to look up other hypo sulphites, and I found under "Hypo sulphite of soda" the following: "Hypo sulphite of soda is a very powerful poison to fungi and other low organic forms." It then went on to speak of its use in medicine in the treatment of fungoid diseases. This seemed to be just the information I wanted. I purchased a quarter of a pound to try it. This was in October last, just when mildew and black spot was appearing on the chrysanthemums and carnations.

I have used the sulphur and lime mixture successfully for many years against mildew. The objection to it is, it is not readily obtained. Druggists do not keep it and it is troublesome to prepare with the appliances usually at the command of the florist. I had a small quantity of it. I began using this on half the greenhouse and the hypo sulphite on the other half, dissolving half an ounce to a gallon of water and applying with a spraying pump.

Both remedies seemed equally efficient. I applied once a week until colder weather required constant firing and the "mildew season" was over.

I do not remember seeing this salt recommended for mildew anywhere. It is worth trying for all the various forms of fungus which destroy plant growth of every sort. It has these advantages: First, it is easily obtainable, every druggist keeps it. Second, it is cheap, as it is used in large quantities in the arts. Third, it is not poisonous. Fourth, it makes a clear solution and leaves little or no stain when it dries off. As I grow carnations chiefly I have no opportunity to test its value on other plants. I hope that others may try it on roses and violets, on grape vines, plum trees, potatoes, gooseberries and all plants infested with fungoid diseases.

SEWALL FISHER.

Framingham, Mass.

Crimums and Pancratiums.

A Florida correspondent writes: "We think they, the crimums especially, are very showy plants. Large bulbs make fine specimen plants out of doors. The cut blooms are very nice used in decorating. Both kinds have a large amount of foliage, which gives a fine setting to the strong flower stalks with their crown of many blooms."

While crimums, pancratiums, hymenocallis and allied plants find more or less favor in private conservatories they are

THE CARNATION AS A POT PLANT

not much used in commercial establishments. But there is a good time coming. Florists who grow a miscellaneous assortment of plants usually carry a few varieties of these and advertise them under the name of spider lily. While excellent for our Southern and Pacific gardens they are not hardy in the North, and this weighs against their popularity; further, as they are mostly summer-blooming they are not esteemed as winter window plants; also, the individual blooms are of brief duration. *Crimum amabile* and *C. Asiatum* are noble evergreen plants for large conservatories, but *C. ornatum* is one of the finest of all for greenhouse use. There are some very pretty pancratiums and crinums indigenous to the Gulf coast and the West Indies and cultivated in Southern gardens. In the North we treat the *hymenocallis* section as dry bulbs, that is we plant them out in summer and lift and keep them dry over winter, and they are very satisfactory plants indeed. W. F.

Aristolochia Ornithocephala.

A southern reader writes: "Is *Aristolochia ornithocephala* hardy? Is it a vine or a bush? I received seeds from Honduras. Is the flower somewhat like any of the other *aristolochias*?"

No, it is not hardy in Central Alabama. It is a long running vine. *Aristolochia*

flowers are unlike those of any other plant, and while the blossoms of the several species have a family likeness they are quite distinct from each other. W. F.

The Society of Indiana Florists.

The Society of Indiana Florists met at Lafayette, Ind. on the afternoon of January 21. A number of the live men of the state were there, but they comprised only a small number compared to those who should have been present to help along in the good work. Mr. M. A. Hunt of Terre Haute, president of the society, delivered a very instructive and suggestive paper. The address contained words of warning and caution drawn from the present condition of the flower markets throughout the country. The thoughts and advice given may well be heeded. The reports of our secretary and treasurer were approved; they showing a satisfactory condition of the society both financially and otherwise.

The subject of holding another chrysanthemum show drew out comments, criticisms and a general interchange of thought and led the society to intrust the holding and management of the next chrysanthemum show to a committee who voluntarily assume all financial responsibility for the same. It is proposed that a finer and much more extensive

exhibit shall be made the coming November than on any past occasion. New varieties of chrysanthemums, roses and all other florists' flowers shall have special premiums and places assigned them. It is proposed that a special premium of considerable size shall be given for the best exhibit tending to bring out the really meritorious varieties that are to be introduced during the spring of '91. This will give the raisers and introducers of the new varieties a good opportunity to display the sorts which are set forth with such fine word painting in the catalogues and lists at the present time. The discussion and the time given to matters pertaining to the coming show will undoubtedly bear fruit. As an earnest of what is proposed, a number at once agreed to produce and exhibit enough plants to warrant a superior exhibit.

In the evening Professor Joseph Harter read a most interesting paper on the diseases of the carnation, which was abundantly illustrated and made plain by numerous specimens showing the disease in its different stages of development. We think he proved conclusively to those present that the germ which destroyed our carnations was a minute microbe which entered the leaves and when once inside the plant structure, destroyed the tissues of the plant. The experiments related cover the past two years—and are still in progress. The essayist has carefully read the *AMERICAN FLORIST* and is cognizant of all that has appeared in its columns. We hope to see a careful setting forth in the columns of the *AMERICAN FLORIST* when the professor has completed his studies on the subject.

Mr. Fred Dörner followed the professor with an equally interesting paper on carnations, their culture and best varieties. Mr. Dörner makes the broad statement that carnations the first few years of their existence will produce double the quantity of flowers they will in the last half, and that six to eight years is the maximum length of time of a carnation's usefulness. This view is held by M. Carle of Lyon, France, one of the foremost cultivators of carnations in Europe. More might be quoted from Mr. Dörner's paper but as his views are to be set forth in a more elaborate paper in the near future before a gathering of florists nothing further need be said at present.

Mr. Pierre Van Landeghem of Purdue, read a paper on diseases of the rose as affecting plants in the open ground, showing the peculiar and insidious manner in which fungoid diseases destroy the usefulness of our fair queen in the garden. All the above papers were discussed and questions propounded, which added much interest to the session.

The meeting convened Thursday a. m., the principal business being the election of officers which resulted as follows: Frederick Dörner, Lafayette, president; B. L. Auger, Fort Wayne, vice-president; Wm. G. Bertermann, Indianapolis, secretary; John Hartie, Indianapolis, assistant secretary; F. J. Duntingdon, Indianapolis, treasurer. The meeting voted to hold its next annual business meeting at Indianapolis next November subject to the call of the president.

Among the exhibits Mr. F. Dörner had vases of all his recently raised new carnations, including those flowering now for the first time. They were greatly admired on account of their large size and sturdy, vigorous growth. *Cyclantherum* and orchids by F. T. McCadden of Cincinnati. A fine array of bulbous stuff was shown by Bertermann Bros., Indianapolis, all nicely done. A dwarf perpetual

flowering scarlet salvia was shown by Mr. John Hartig. This is a plant of much promise for bedding on account of its very dense, sturdy growth and free blooming qualities.

A drive to Purdue University, and an inspection of the U. S. Experimental Station and the greenhouses of the university was much enjoyed. The members of the society were the recipients of a splendid banquet set at the house of Mr. and Mrs. Dornier, and to which all present were ample justice. After the good things so generously provided by our host and hostess had been disposed of, toasts, and a general good time was had. One and all say, long life to Mr. and Mrs. Dornier and their genial family of boys and girls.

E. G. HILL.

The Outlook.

In his address to the Society of Indiana Florists, at its recent session, President M. A. Hunt made some timely and pertinent comments on the present outlook for the trade. We print below some extracts from the latter part of the address, the opening paragraph being to a review of the trade in the west for the last twenty-five years.

"Holiday sales last season, but more notably those of the present year, point unmistakably to the fact that some change will have to be made in our methods if we would avoid overproduction and consequent stagnation. How shall we forecast the future in order to avoid the shoals upon which so many in other callings have stranded within the past few months.

"It is useless to lay down a code of rules for our government, in fact, I doubt if any recommendations even will be heeded by those in the mad rush of competition. The commercial florists of our land have caught the 'American spirit,' are imbued and permeated with the push and energy of the day, in fact, the very force of habit that has grown upon them through years of active business life, constantly impells them to reach out after all the trade, and their individual powers of digestion and assimilation seem to be unlimited. This, however, will not prevent a few suggestions, which, could they be generally heeded and adopted, would, I feel sure, secure to us future prosperity individually and collectively.

"The first suggestion I would make is this: Cease to grow for a prospective or speculative demand. Let every grower be content to raise only such an amount will supply his established trade. In this way overproduction will be held in abeyance, and a healthy demand will be everywhere present.

"Second. The foregoing proposition assumes that no more money be invested in glass until such time as the demand exceeds our individual producing capacity. Put your yearly profits instead into some safe security entirely foreign to the business you pursue, and thus establish an income independent of the ups and downs of your own. In making this investment be satisfied with a reasonable rate of interest, based on first-class security, rather than seek higher rates, speculative values and probable losses.

"Third. Instead of bending every energy to produce as we have in the past, let us unitedly work to create a greater demand and to do this allow me to suggest, first, that as individual growers we raise the standard of excellence of our product, whatever it may be; let quality, not quantity, be our aim. Again, with the very best that can be produced in hand, let us all unite, east, west, north and south, in cities, villages, communities,

everywhere, where flowers are found and known, to educate the people to a greater appreciation of and consequent use of what we already love, a dormant love of which is found in every human breast.

"To this end, let those connected with city exhibitions redouble their efforts to make them a success, and never give up or yield to discouragement, even if the receipts do not meet expenses; it is only a species of advertising, then which nothing pays better in the end, but it must be persisted in from year to year, systematically, enthusiastically, and with financial support if need be to make receipts and expenses balance. This done, results aimed at are as sure to follow as we are sure of success in any educational enterprise. In States where there are no large cities, be sure and make all the showing the season will admit of at your state and county fairs, and in addition to this, if those residing in each county would unite to make an exhibit of chrysanthemums at their county seat, adding such plants or flowers as can be well shown at that time and will add to the general interest, much may in this way be accomplished by way of educating the people to feel they need and must have the best our art produces.

"Above all, never fail to use every means at your command to increase the interest in your own community; even if you have no one to join with you, do not neglect your opportunity for that reason, as in this instance you have the assurance to begin with that there will be no discords, and that you will have your own way in all things, an exceedingly satisfactory condition of things to some minds. Persist, then, in making the most of every opportunity, results will follow, and the honor and profit will all be your own."

The Queen of Flowers.

By JOHN N. MAY.

[Read before the Massachusetts Horticultural Society, January 24, 1894.]

Having been requested by your honorable committee to read a paper on this subject, I have in the following endeavored to say enough at any rate, to open a discussion whereby your essayist trusts to learn more than he can ever hope to teach by anything that can be said. As this subject has been so well and ably presented to this body so many times before, by men much better informed and more able to present it to you intelligently than myself, I feel that I am almost an interloper here, and would certainly much rather be a listener than a talker on the subject; however, I will give my experience with the rose, and trust you will be lenient with my criticisms.

This, the Queen of all flowers, has always reigned supreme for me, and will till the end of time. My first experience with the rose dates from the time I was about 8½ years old, when I borrowed (without permission) three eyes of *Souvenir de la Malmaison*, then a new rose. I am sorry to have to confess it at this late day, but a clear confession is good for the soul, so it is said, anyway, having watched an elder brother doing

considerable budding, and wishing to try my hand at it I borrowed, as above stated, three eyes from my father's garden and took them to a neighboring hedge where I found a wild rose on which I budded them, one of which grew and the next season produced three fine flowers, and from that day on the rose (and this variety in particular) has always held a charm for me.

During all these years I have seen many, very many changes in the rose, though some of the varieties that were then in their glory have not yet been eclipsed and still retain their places in the front rank. Among many I may mention General Jacqueminot, Giant des Batailles, and many others too numerous to mention here. Among the tea roses, Niphetos, Lamarque, Gloire de Dijon and others still rank as first favorites; the same may be said of all the other branches of this family. But no one can gainsay that there are not many great improvements in the family, introduced within the last ten or twenty years; take, for instance, the magnificent Ulrich Brunner, Mrs. John Laing, Earl of Dufferin, T. W. Girdlestone, and many others of the same family. Among the teas, the most graceful of all, combining as it does, elegance of form, beautiful color and fragrance, stands pre-eminently Catherine Mermet, and the offspring the Bride, which to-day is recognized all over the civilized world as the finest white tea rose in cultivation; and of this year's introduction the glorious Waban, now before you, and its mother and sister grown and produced at the celebrated Waban Conservatories here in your own state, which clearly demonstrates the fact that the cultivation of the rose has wonderfully advanced within the last decade.

It may not be out of place at this time to give a few remarks on the cultivation of the rose here. Twenty years ago the principal roses grown for our markets were Bon Silene, Safrano, Lamarque and a few others of like character. The only roses of any size then grown were Marechal Niel and Cornelia Cook, to-day they are almost entirely supplanted by much superior varieties, such as you now see before you, and many others of a like size and beauty. To attain this end considerable skill has been brought to bear on their cultivation. Twenty years ago possibly five thousand roses per day was the limit of the supply for New York city, now as many as fifty thousand roses per day can often be found there and, according to my own estimate based on the most careful calculation, I think I am quite within the limit to say that often it reaches in the spring of the year to nearly one hundred thousand per day, which speaks volumes in itself for the growth, advancement, refinement in taste and development of horticulture. To meet the demands of the public many changes in the cultivation have been brought about; where with the old system one rose was cut ten at the present time are cut from the same space. Perhaps you will ask how this has been brought about, my answer is, largely by superior cultivation. Formerly they were all grown in the solid bed of the greenhouse, now they are grown on raised benches, beds, etc., and with the greatly improved style of greenhouses now at the command of the grower they are enabled to produce large quantities with comparatively little expense to what they formerly did.

When I began cultivating roses under this system many growers predicted failure, to-day 90 per cent of the florists in this country are growing their roses on

HOUSE OF HYBRID ROSES AT MR. J. N. MAY'S

that principle, with, of course, some modifications which experience has taught. It was formerly the practice to plant a house of tea roses, grow them on for years till they actually died from overwork; now the general practice is to replant fine, healthy, new stock every year, or, at most, every two years; originally the prevailing idea was that the roses must have a deep rich border ranging from 12 to 24 inches deep to produce good roses; now the finest roses in the country are produced on benches, etc., with from 2½ to 4 inches of soil.

To keep plants in such a shallow bench constantly bearing they must, of course, have liberal treatment; after they are planted, say in July, and get fairly started into growth they need a mulching of the best manure they can have. This induces surface root action, which roots should never be disturbed, and in the course of eight or ten weeks the plants will have absorbed the above coat of mulching. Our practice is to then give a light dressing of pure fine ground bone, covering the same with another thin coat of manure; this is feeding the plants where it will do the most good and at the same time keep up their roots where they get all the benefit of the fresh air circulating through

the house. This process is repeated as often as required, and where the plants are growing very strong careful application of other stimulants, such as liquid manure, nitrate of soda, etc., is of great benefit to them, providing, of course, due care is used in its application. To apply such strong stimulants injudiciously simply means ruin not only to the flowers but the plants also. I do not hesitate to say that more plants have been killed by overfeeding than all other causes put together. One thing should always be borne in mind in reference to plant life, and that is that they are almost identical to animal life so far as their requirements go. To maintain a plant in health and vigor it requires careful and judicious feeding, just as an animal does, and the harder it works the more care it requires. Those who treat their plants or animals otherwise than reasonably will pay dear for their pains and reap the harvest for which they have sown.

Possibly some may doubt the soundness of such a doctrine and say, as many have done to me, "How can you reconcile this statement with our practice of growing roses in the open ground where we use immense quantities of manure, and the more we use the better our roses grow

and bloom?" Very true, they do, but the conditions are so totally different that there can be no comparison whatever. In the open ground the action of the air, the wonderful power of absorption of the soil of unlimited depth, dew by night, rains and sun by day, all tend to produce such a vast difference to the conditions of a greenhouse where every drop of water or particle of manure has to be brought into direct contact with the roots of the plants that it would seem almost an absurdity to make any comparison whatever.

For the successful cultivation of the rose under glass there are a few simple rules to follow: First, to procure a suitable soil, which should be, if possible, fresh sod from an old pasture; that having plenty of grass root fibre in it is generally the best. If very heavy the addition of a liberal proportion of sharp sand will improve it, but if of very light sandy nature the addition of some of a clay nature will for most roses be beneficial. When carting together in the spring mix with it one part good clean cow manure to six, eight or ten of soil according to quality of the soil. Turn it over two or three times and it is ready to put into the rose house.

The next is good, strong, clean and healthy plant, for without such no one need expect the best results; and the next is to keep the house, after the roses are planted, in a good condition as long as they are in it, which means all the year round. This is more important than many suppose, as no plant can reasonably be expected to thrive where dirt, mud and decaying vegetable matter is allowed to lay unmolested for weeks or months together.

And, lastly, the watering and general care of the plants. On the subject of watering there is a wide diversity of opinion, mainly brought about by the different conditions of soil. The only safe guide is a careful study of the nature of the soil one has to deal with, and use water in proportion to its requirements. As a general rule a rose in full growth should never be allowed to become dust dry, neither should it be flooded with water till it becomes almost the nature of mud, but for nearly all soils it is better to water the plants immediately the soil shows the least indication of getting solid or turning slightly light in color.

For the general care and management I am afraid I should tire you all if I even attempted to describe it in detail, but even if I did not do that I think it entirely unnecessary here, as much so as it would be for a stranger to go to Rome and tell the Romans what to do; but, in conclusion permit me to say that although I think and honestly believe that in the past twenty years greater strides have been made in the cultivation of the rose than was ever done in double that time during previous years, yet I as earnestly think much greater advancement will be made in the next ten years than has been done in the past twenty. Evidence of this is very clear to any one visiting the different parts of this country, and I trust after we have all passed away the "Queen of Flowers" will still have as great a charm for our successors as it has for us. Long may she reign supreme, and this hospitable city remain the seat of her throne to which pilgrims will ever come from all over this broad land to do homage to her majesty in all her golden glory!

Calanthes for Cut Flowers.

Among all the orchids perhaps none are more useful than the calanthe, coming in flower after most of the glory of the chrysanthemum has waned, and in the dull months and holiday time they come in very useful. Spikes of Veitchii combined with fronds of *Adiantum Farleyense* or the dark green of the climbing *Asparagus plumosa* make them fine for room or table decoration, as well as for the conservatory. They are very lasting and will keep longer in good condition than most any other flower. Where they can be grown by the hundred in masses nothing will make so rich a display.

On a bench 29½ feet by 2½ feet Mr. McWilliam, gardener for Mrs. Liscil, Whitinsville, Mass., had this last season 106 pots or plants averaging 3 spikes each, or 318 not counting small ones. The spikes were from 2½ to 4½ feet in length, 25 to 48 perfect flowers to the

spike, average 36. He has four varieties of Veitchii of various shades of pink. The best is compacta; the flowers of this are set very close on the stem. Two white ones, *Vestita luteo* and *Vestita rubro-occulata*, the yellow and red eyed sorts, contrast excellently with Veitchii. These three are of the dry bulb species and require a season of rest after flowering. *Vestita occlusata gigantea* and *Regnierii* also grown here are late following sorts; they are just now coming in while the former three are about over, thus they prolong the season of bloom. They partake more of the character of the evergreen species; not long after flowering they will want to begin growth again for another season.

In a commercial way the calanthe ought to stand high, owing as stated above to its grand decorative qualities and its merit of long standing in good condition; also for flowering in the dull winter time and at the holidays. Enterprising florists near the large flower markets would do well to increase their stock; hundreds of spikes could be disposed of which would bring in the always needed dollars.

Calanthes are as easy to manage as many other things that are grown by the houseful; if they get the proper treatment and attention will do well. Being natives of the warm eastern countries they need to be given a temperature accordingly, even when at rest the bulbs ought to be kept perfectly warm and dry till they again show signs of making growth.

January 26.

W. S.

Fine Phalaenopsis.

The phalaenopsis at the Rose Hill Nurseries, New Rochelle, N. Y., are now approaching the height of their beauty. Among the more conspicuous ones at present in flower are *P. amabilis*, *P. Schilleriana*, *P. Stewardiana* and *P. casta*. The first three named have leaves from three to five inches in width and from eight to fifteen inches long, and each plant has from four to seven leaves. They are the wonder of visitors. The plants are in small cedar baskets and this is here considered an essential point in their culture.

A. J. E.

The Society of American Florists.

When the Society of American Florists was organized and set going under so favorable auspices, I, and doubtless many others, were flattered by the idea that now we would have an educator, a something that would bring to the front our business and thus entitle us to that respect, and accord to us that dignity, that is everywhere accredited to all respectable trades or professions. For is not ours a most ennobling and elevating avocation? Have we not to do with the beautiful in nature as well as art?

Our meetings were well attended and were at first seasons of instruction and benefit to all. The various subjects belonging to our craft were brought to our notice, and the wise and experienced discussed them in an interesting and instructive manner. The various sessions of the meetings were held with decorum and all things gave promise of a realization of that which many of us hoped for. I trust the inceptors of this association had in mind not only that we all might be taught how best to grow carnations, violets, roses or chrysanthemums, but also how we might become better men, in the fullest sense of the term, honest in all our dealings and intercourse with our fellow men.

Now I am not about to say that the meetings are not as largely attended or the different sessions are not held in harmony and with dignity or that those who do attend are not instructed, but I do say that taking it all in all the association is not maintaining its dignity and character as some were led to believe it would. It seems as if the whole thing begins to take on the nature of festive occasions and that each place that may be selected for the next ensuing meeting tries to out do in the way of entertainment, the last one; that so much time is being taken up by excursions and sight-seeing that the whole army of florists get into a demoralized condition and pay but little attention to the business proper that comes before the society, and often when an important paper is being read, the preparation and writing of which has taken much time and patience of the author, scarce a hundred are present to attend or to join in the often very interesting discussions. All will concede that this is not very flattering or complimentary to the writer's ability, and certainly not very encouraging for future assysts.

I became a member of this association for the benefit I hoped to obtain by associating with the florists of America. I desired to be benefited in my business, in learning how to grow better plants and more beautiful flowers, I hoped to be enlarged and improved in every way. I believe many others joined the association from a similar desire. I am not about to say that I or not benefited, for I am, and that largely, and I am glad of it, and I still hope to be more so in every way that is right and laudable.

I did not join the association to eat ham sandwiches, lobster salad, or ices. All are very well in their places, and I like them all. But fellow members, you who were at the Boston meeting, do you remember how like a wet blanket it fell over the few who were in the hall when our President, Mr. Jordan, announced that "naming the place for our next meeting is now in order." It was as still as death for a short time. Why? Because no city, or the representative of any city, felt like inviting the association to hold its next meeting there. Why? Because it has grown to be such a heavy tax on the local florists where the meeting might be held, that none felt like urging their city for the place.

Now I am not going to say one word against the hospitality of Boston. On the contrary, I was glad the association met there, and among all I was there, I saw all I did see, and ate all the lobster salad I did, and enjoyed the society of the Boston florists. It was a delightful time and I must confess that through the courtesy of the Florist Club of Boston I had an opportunity of visiting and seeing many things that perhaps but for them I never would have had the privilege of doing, and I wish here to express my thanks to the florists of Boston for this, and especially for their kindness to me in rendering every attention and making me so comfortable while suffering from an attack of sciatic rheumatism, and I desire every one of them to accept my personal thanks. But aside from all this, I certainly think the club incurred too great an expense as well as annoyance and inconvenience to themselves in providing such elaborate entertainments. And now comes the wet blanket scene referred to above. I wanted very much to extend to the society an invitation to name my own beautifully, Minneapolis, as the place of the next meeting, but after seeing how nobly and richly Boston had

VIEW IN LINCOLN PARK, CHICAGO.

done I had no more spirit of entertainment left in me. And I doubt not there were others who felt as I did. We had nothing to show you but our Minnehaha, our Minnetonka, our big mills and our big prairies, all of which indeed would be worth seeing, but alas how could we feed you, after having been to Boston. And as there we sat, no one offering a resting place, we were about to have to rent poorer quarters. But just then our Canadian neighbors seeing our dilemma came to our rescue and so the meeting will be held in Toronto next August. May the sturdy Canadians set us an example of economy and frugality, and give us oat meal porridge. I hope they will also be sure to give us nothing stronger than tea or coffee to drink. R. J. MENDENHALL, Minneapolis, Minn.

View in Lincoln Park, Chicago.

The illustration is from a photograph taken last summer and shows in the foreground one of the numerous vases with which the park is ornamented in the summer time. As will be noted the principal vines used in filling the vase were tropaeolums. These are very extensively used here for this purpose and for a large showy vase they are remarkably effective.

The rapidity with which they attain to an effective size and condition is also in their favor. We believe that the illustration as a whole will be appreciated as a beautiful picture.

New York.

This has been one of the busiest weeks this season, and the near future promises to be equally as good. The Astor ball on Monday night was a very brilliant affair; the decorations by Klunder were magnificent, an exhibition of floral art. The large hallway was lined with groups of flowering plants, clusters of *Lilium Harrisii*, banks of pink azaleas and groups of genista, between these were arranged beds of tulips, hyacinths and jonquils. At the entrance to the stairway stood a clump of orange trees bearing fruit, the doorways were arched with flowering shrubs, one being of *forssythia* blossoms, the others quince, apple, etc., the whole presenting a beautiful picture of spring. The reception room was an exotic scene. The mantel was a mass of *A. Farleyense* and cattleyas, with blocks of *phalenopsis* hanging on the sides, the fire-place being filled with *Anthurium Andreanum* and *amaryllis* to represent a blaze of fire. The

mirrors were handsomely curtained with *Asparagus tenuissimus*, which was looped with clusters of *oncidiums*. Fine vases of white lilacs and *La France* roses were placed on side cases and tables. The art gallery, which is used for dancing in, was decorated with roses, which were arranged in Roman garlands on the statuary and amongst the pictures. The balcony used by the musicians was covered with trailing vines and clusters of orchids. Supper was served on small tables in the centers of which were placed handsome baskets of *La France* roses.

Thorley, Dards and Hodgson were busy decorating the houses of the Vanderbilt family on Wednesday and Thursday for dinners, musicales and receptions. These brought a certain amount of animation into society, and many large dinners and afternoon teas followed, where Bogert, McConnell, Stump, Butler, Brower and the rest displayed their usual good taste in the table decorations.

It would need columns to describe them all. Perhaps the most novel was a table design by Stump, purporting to be a "field of flowers." On a round board five feet in diameter oats were grown on earth one inch in depth until it had the appearance of a plot of grass. Clusters of daisies, myosotis, jonquils, crocus, pansies, etc.,

were arranged amongst the grass. In the center of the design stood a fine branch of appleblossoms, the whole giving a pretty idea of "the flowers that bloom in the spring." It was very much admired by Mr. E. Asmus, Robert Bottomly and Chas. Weathered, who happened to be visiting Mr. Stump in regard to the coming exhibition.

Artists are busy on designs for the show, and judging from the manner the several committees are working and the great interest taken in it by every branch of our trade, it will be the finest exhibition ever given here. Every class of work will be represented, from the latest boutonnières and hand-bouquets to the banquet and hall decorations. Mr. Asmus proposes an opera box decoration also, a very pretty idea, and one that will surely start the fashion of decorating boxes for the opera. It is by doing such things, the holding of exhibitions, the introduction of flowers for occasions that are at present ignored, that we encourage the business, put flowers in the light of a necessity, and make the public understand that there is no pleasure so sweet (or so cheap) as the fragrant kiss of a beautiful flower.

There are many valuable prizes, including ten beautifully engraved silver cups, to be awarded in the different classes. It is expected that our Boston and Philadelphia brothers will compete for some of these prizes. The trade within easy reach of this city will do well to visit this exhibition, as the latest and best New York can do will be shown there.

There were some beautiful bouquets carried at the Carmecita Ball, at the Madison Square Garden, last night. Thorley, Scallen and Ellis were busy supplying flowers for this occasion.

The warm, spring-like weather of the past week has benefitted the business very much. Flowers added to the charms of almost every lady one met, and we notice with pleasure that it is fashionable to wear flowers on the street this spring. Violets seem to be the favorite breast bouquet, while some wear bunches of jonquils or carnations at the waistband. Others jaunt along with some beautiful rose. Violets are the most worn by gentlemen during the daytime, whilst large boutonnières of white carnations, lily of the valley, Madame Hoste rose, or gardenia (which is always preferred) are worn during the evening.

A basket filled with Erica Wilnoriana, and trimmed with "McGregor" ribbon, was quite taking. Bunches of spring flowers and flowering plants may now be seen in "society people's" windows. Let us encourage the taste.

JOHN YOUNG.

Boston.

The last week has seen a revival in the cut flower trade. The improvement seems to be general all over the country, judging by wholesale orders from other sections, and business will no doubt continue good until Lent comes in. Roses are especially in demand, although the prevailing prices are far below those of the corresponding time in previous years. There is a brisk demand for violets and carnations also. There are a few Jacus in the market, and occasionally a few Marechal Niels are to be seen.

In carnations the most generally grown variety here seems to be the Grace Wilder this season. The demand for it seems almost unlimited. A new seedling of much promise was shown at Horticultural Hall recently by Mr. Ernest E.

Fewkes. In color it is about half way between the Grace Wilder and Century. It is a round symmetrical flower, nicely fringed, and in the samples exhibited there was no sign of bursting. In fragrance it is phenomenal, being decidedly the most highly perfumed pink ever shown here.

Another new carnation of promise is a seedling owned by Mr. R. T. Lombard. It is yellow, a strong handsome flower, and in all probability will soon become one of the leading market varieties.

Double daffodils seem to be in great demand this year. They sell more readily than the single trumpets and bring a better price. Tulips do not sell as they did a few winters ago. Freesias are very abundant and prices low.

In many of the florists' windows are to be seen Chinese primroses in great abundance. As a house plant they seem to be very popular.

Mr. J. N. May and Mr. Robt. Craig paid a flying visit to Boston this week to see the Waban rose growing. There have been quite a number of visitors from a distance to Natick on this same errand. The general verdict is that the picture does not do the rose full justice.

A number of the florist friends of Mr. E. J. Welch made a sudden call upon that gentleman at his residence in Dorchester this week, the immediate object of the visit being a desire to congratulate him upon his recent marriage. It is hardly necessary to remark that their object was accomplished and the whole affair was a glorious success.

W. J. S.

Cleveland.

Holiday trade was good and the florists were correspondingly happy. The warm weather just before Christmas supplied us with plenty of flowers of good quality, but the demand fully equalled the supply. One thing is sure it does not pay to buy too largely, though one of our florists says he bought \$600 worth of flowers besides using all that he cut from 90,000 feet of glass.

The sale of "greens" was fully up to last year. Holly and ground pine were both sold out clean and were of much better quality than last year. Good holly wreaths with plenty of berries sold at 50 cents retail and quick sales at that, supply limited and demand active. One feature of this season's work was the demand for a better class of holly and green work.

Herman A. Hart, out on Detroit street, looks trim and neat, a fine healthy house of primulas have some new shades and colors among them. This place is successfully heated by steam.

At J. M. Gasser's everything is in excellent order. He is making a number of experiments this season, and judging from results they are successful. In a number of houses a change has been made to overhead heating, Mr. G. claims that it saves labor both in watering and, in case of an accident, the accessibility of the pipes. Under the benches it often being a most difficult and back breaking matter to get at them.

He has also adopted the solid bed principle. In these houses which are 100x22 feet the beds are raised a few inches above the walks, 2-inch drain tile are placed 8 or 10 inches apart, earth to the depth of 5 inches placed on top of these, into which the carnations are planted. Mr. G. has one house of carnations 100x22, planted on benches but they do not compare at all favorably with those planted in solid beds with overhead heating. Another point I was surprised at was the distance

of the plants from the glass. The center bench was from 7 to 10 feet, and still no bad effects, no drawing, all the plants stocky and the buds as close together as they could stand.

Silver Spray for white, Harrison and Carnegie and Grace Wilder for pink, Century and E. G. Hill for scarlet and crimson, and Black Knight for dark maroon, are the leading varieties grown.

The palm house, fern house and croton houses in excellent order, the crotons being especially well colored. A fine lot of lilacs are in bloom, as also the finest house of mignonette it has ever been my good fortune to see. Mr. G. says they bring him at retail 25 cents per head. Violets were not in flower yet, but the plants looked thrifty and clean, without disease.

Mrs. Gasser, the efficient partner of Mr. G. has been seriously ill for some time, but is now improving.

A matter which has interested the local florists this past week has been a closely contested law suit in which Florist E. G. Campbell was defendant and Joe Turek plaintiff. The case has attracted considerable local attention and the daily papers gave the case more than usual space.

The plaintiff claimed \$5,000 damages for injuries received while in the employ of the defendant, through being thrown from a wagon, due to the giving way of one of the drawlamps and consequent shying of the horse and overturning of the wagon, resulting in the dislocation of plaintiff's hip joint. The defendant denied any knowledge of the defective drawlamp and introduced a bill for general repairs on the wagon as evidence that it was in safe condition. Also averring that when the plaintiff returned after the accident an examination revealed no serious bruises and for five weeks thereafter he attended to his regular duties without making any complaint, and that he had received orders to have made any small repairs necessary to the safety of the vehicle. The plaintiff admitted on the stand that the crack in the drawlamp had been called to his attention by another employe and on the ground of contributory negligence a verdict was rendered for the defendant.

C.

OBITUARY.

On the 13th of January Mr. Benjamin Coles Townsend died suddenly of heart failure at his retired home at Bay Ridge, L. I. Mr. Townsend was 73 years old and until he retired three years ago was a prominent New York business man. All his life long he was passionately devoted to floriculture, and at one time was President of the New York Horticultural Society. For some time before he died he was aware that the end was near, and last summer he expressed a wish to his family: "When I pass away smother me in roses," and his wish was gratified. A happy, gentle gentleman, to know him was to love him.

W. F.

Floriculture in the South.

I would like to add a word or two in reference to the notes from Mr. J. Morton, of Clarksville, Tenn. He is in error in his belief that there are no properly equipped rose houses here, but south of him. If Mr. M. would take a short trip to Atlanta, Ga., he could inspect such an establishment, one which I believe is destined to become at no distant day a formidable competitor of the Washington and Boston rosebud growers.

Atlanta, Ga.

Geo. HINMAN.

News Notes.

SCRANTON, PA.—Warner & McConnell have started in the nursery business here at 114 River and 928 James streets.

FT. WORTH, TEX.—The Fort Worth Nursery, Seed and Canning Co. has had very good success with roses and carnations this season. They have added a new carnation house 100x20.

PEORIA, ILL.—Matthew Cation, the florist, son of the late Wm. Cation, died January 18 from consumption, aged 32 years. He leaves a widow and one child, the latter but three weeks old.

PORTLAND, OREGON.—We have an excellent winter here in Portland. Thermometer has not been below 27° above, and it seems like spring. I picked roses in my garden this morning (Jan. 20).

COLUMBUS, IND.—A. Glenn, the nurseryman, has left town under peculiar circumstances. The Sheriff is in possession of his property. It is reported that he left to avoid arrest for attempted blackmail.

WOOSTER, O.—The Wooster Floral Club has been organized and the following officers chosen: President, L. R. Kramer; Vice-President, S. H. Boyd; Secretary, W. A. Porter; Treasurer, Ed. Seigenthaler.

WASHINGTON.—Flowers must have been very scarce, since a local florist has been obliged to buy the season's crop of cut flowers raised by Uncle Sam at the Reform School. A little "reform" seems to be needed right at headquarters.

MINNEAPOLIS.—At the 24th annual convention of the Minnesota State Horticultural Society, held in this city January 22 and 23, a resolution was passed inviting the American Association of Nurserymen to hold its next meeting in this city.

INDIANAPOLIS.—John Heidenreich, a new florist here, has built three greenhouses, 50x11 each, on Apple Gate and Morton streets. The place is heated by steam. He will grow cut flowers and plants and should be added to the list in the directory as F.

PITTSBURGH.—The Pittsburgh and Allegheny Florists' and Gardeners' Club is contemplating the erection of a club house to cost several thousand dollars. The display of orchids in bloom at the conservatories of the Allegheny Parks has attracted crowds of visitors of late.

BRISTOL, PA.—Harry Chambers has added two houses this season, one 50x10 for carnations and another 14x10 for potted plants. DeWitt Bros. have thrown out all their small boilers and 4-inch pipe and have put in a 65 H. P. return hot boiler, heating their entire plant with hot water through 1½-inch steam pipes under pressure. It works very satisfactorily.

UNION SPRINGS, ALA.—Christmas trade was good and fair prices were obtained. The demand for cut flowers exceeded the supply and we had quantities of rose buds. A. B. Strickland cut 500 rose buds from plants in the open ground on Dec. 23, and these included all the leading varieties. Some of the Beauties and Nels were very handsome and perfect. There has been no cold weather to amount to anything here, and plants in the open ground look as fresh as in the spring time.

SAN FRANCISCO.—A movement is soon to be inaugurated to make at the World's Fair at Chicago a splendid display of California flowers, pressed and mounted

as for an herbarium. The method proposed is to offer prizes in each school district of the state for the best collection gathered in that district. Each flower is to be labeled with both its popular and botanical name. After the display at Chicago the whole collection is to be presented to some educational institution or museum.

DALLAS, TEX.—Business during the holidays was not as good as last year. We had flowers shipped from Chicago and St. Louis but the high prices we had to charge in order to come out even hurt trade. Mostly loose cut flowers were called for, very few decorations this year as people are hard up. Roses retailed at from \$3 to \$5 a dozen, carnations \$1 to \$1.50, hyacinths \$1.50, violets 25 cents to 50 cents a bunch, callas 50 cents each, Harrisias 25 cents to 50 cents each. Since the holidays trade has been very poor, but is now beginning to pick up again.

St. PAUL.—August S. Swanson, the florist, made an assignment for the benefit of his creditors January 27. Assets and liabilities will probably foot up about \$9,000 or \$10,000. The main cause of the failure was the very poor business the last season in conjunction with an almost total failure of the roses, which through unfortunate circumstances failed to respond with any blooms, and thus caused him a loss of from \$2,500 to \$3,000. The failure is generally regretted among the trade here, as Mr. Swanson had many friends. An effort will be made to so arrange matters that he may continue the business and be given a chance to recover the lost ground.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven characters to a line) and will be accompanied order. Plant ads. not admitted under this head.

Seeds Trade.

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president; JOHN FOTTLER, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1891.

Special Quotations.

The season is now at hand for "special quotations." Here is the first sample received by a gardener in the south:

1 pkt. Lettuce, Hanson's Improved.....	.03
1 pkt. Melon, Chicago Market and Osage and Nectar.....	.03
1 pkt. Melon, Green and Gold and Seminoe.....	.03
1 pkt. Onion, Silver King.....	.03
1 pkt. Parsley, Moss Curled.....	.03
1 pkt. Sage.....	.03
1 pkt. Bliss Wonder Pride of M.....	.05
1 pkt. Pumpkin, Mammoth Tiers.....	.03
1 pkt. Tomato, Peach.....	.10

All of the seed to be the highest grade and from new crop. Cash to accompany order.

Comment is unnecessary.

It is now Hon. Everett B. Clark, of Milford, Conn. It serves him right. His strains of Conn. grown seed we believe are none the worse for this.

THE 1891 catalogue of S. L. Allen & Co., manufacturers of Planet Jr. goods, shows still further improvements in their line of gardening implements.

The committee appointed in June by the Seed Trade Association to investigate alleged fraudulent entry of imported seeds are reported to be actively at work.

REPORTS from leading wholesale houses indicate that many florists are asking for extension on their accounts due January 1, and collections from them are not up to the usual January standard.

BALTIMORE.—C. M. Hildesheim, living near Chestnut Grove, Baltimore county, had a hearing before United States Commissioner Rogers on the charge of using the mails for fraudulent purposes. The evidence showed that Hildesheim sent out a large number of illustrated price lists of seeds and plants and rented a box at the Baltimore postoffice, to which orders were to be sent. Complaint was made to the postal authorities that in some cases Hildesheim failed to send the articles ordered, and in others only did so after great delay. Hildesheim said he did not send the purchases, as charged, because he did not have the articles on hand at the time, but would fill all orders as soon as possible. He said he had no intention of defrauding, and promised there should be no further complaints. The commissioner held the case under advisement.—*Baltimore Sun*, Jan. 20.

THE NEW ROSE

WABAN

This very valuable rose originated at the Waban Conservatories of E. M. Wood & Co., Natick, Mass. It is a *SPORT* from Catherine Mermet and identical with that variety in every characteristic, excepting color, which is a rich, deep, **BRIGHT PINK**; it sustains the same relation to its parent as Duchess of Albany does to LaFrance. The only objection to C. Mermet is its frequently pale, insipid color in cloudy weather; experience has shown that the **WABAN** retains its deep rich color in all kinds of weather; it will, without doubt, prove to be as valuable as **THE BRIDE** which is also a sport from the same magnificent variety.

IT HAS ALREADY RECEIVED THE SILVER MEDAL

of the Massachusetts Horticultural Society; of the Pennsylvania Horticultural Society, and **Certificate of Merit** from each of the Societies in this country and Canada where it has been shown,

Ready for Distribution on April 15th, 1891.

Orders booked now, will be filled in strict rotation.

Extra good plants from 2½-inch pots.

1 Plant,	\$ 1.00	250 Plants,	\$100.00
12 Plants,	9.00	500 "	175.00
50 "	30.00	1000 "	300.00

From 4-inch pots.

1 Plant,	\$ 1.50	50 Plants,	\$ 40.00
12 Plants,	15.00	100 "	75.00
25 "	25.00		

The following Agents have been appointed to sell the Rose in the respective territories given below:

W. J. STEWART, 67 Bromfield St., Boston, Mass., for the New England States (except Connecticut) and Quebec.

JOHN N. MAY, Summit, N. J., for Connecticut, New Jersey, New York, Michigan, Indiana and Ontario.

ROBT. CRAIG, 49th & Market Sts., Philadelphia, Pa., for Pennsylvania, Ohio and all Southern States, east of the Mississippi River, and District of Columbia.

J. C. VAUGHAN, P. O. Box 688, Chicago, for Illinois, Wisconsin, Minnesota, and all States and Territories west of Mississippi River and Canadian Territory west of Ontario.

Chicago.

The main difficulty in arranging for the proposed spring flower show, now being considered by the Horticultural Society, is the question of securing a suitable hall. The Auditorium was suggested and a call by a member of the society resulted in the tendering of a special cut rate of only \$1,400 a day. It is unnecessary to add that the show will not be held there.

Mr. F. Sulzer, one of Chicago's pioneer florists, has sold his greenhouses and business to Wm. Hoppe & Co., and has retired to enjoy the fruits of many years of active business life.

The new greenhouses at Lincoln Park are nearly all ready for use, and plants have been moved into some of them. Some of the old houses have been torn down, the glass in their roofs having been transferred to those of the new houses.

W. D. Allen, the State street florist, has sold out to a stock company which will bear the title the W. D. Allen Floral Co.

The Florist Club's entertainment last Friday evening was a very enjoyable event. The music was good, the floor was in splendid condition and the merry crowd present "tripped the light fantastic" until 1 a. m. The supper was also excellent and many pleasantries were exchanged during its discussion. The wives and lady friends of the members who had not yet met each other were soon on a friendly footing and the object of the gathering was thus fully accomplished. During the evening several of the ladies favored the company with vocal selections and "the boys" rendered the club's only and original song. Those who stayed at home missed a good time.

Mr. O. P. Bassett is now at Suwanee, Fla. He hopes to find relief from rheumatism through the sulphur springs there.

There are still many complaints of poor trade. The supply of nearly all flowers is rather short. Weather very cold and blustering.

The regular semi-monthly meeting of the Florist Club will be held next Thursday, the 12th inst.

The appointment of Chief of the Horticultural Department of the World's Fair is still hanging fire.

Fungus in the Propagating Bed.

I would like to hear from some older florists about their experience with fungus in the propagating bed. I have been troubled with it considerably lately, and have not been able to determine the cause. The propagating bed is in a house where we keep alternantheras and other bedding plants. I keep the house dry and do not overwater the bed. The temperature of the bed is kept about 70°. The fungus started first among ivy-leaved geranium cuttings of young wood. The sand was taken fresh from Lake Michigan in November. JAS. JENSEN.

GEO. HANCOCK, Grand Haven, Michigan.

Are We the Sinners.

ED. AM. FLORIST.—I have been very much interested in the articles in the FLORIST concerning parties who have refused good shipped C. O. D. If I did not have a little practical experience in that line I would come to the conclusion that "we only are the sinners," but I think that class of florists to which I belong (retailers and growers) have been more sinned against, and as a matter of protection sometimes we have to sin, by refusing to receive goods shipped C. O. D. Some years ago the writer ordered flowers for a funeral, thirty hours' time was given to the shipper, the time was plainly specified when the goods were wanted. They arrived C. O. D. just at the time the funeral was at the church and were refused—result, some very tall kicking.

Last Decoration Day twenty-four dollars' worth of flowers were ordered. It was plainly stated that the flowers would be wanted noon the previous day. Noon came, no flowers; six p. m., no flowers. I telephoned the house and they replied the goods were on the way per American Express. Eight p. m., no flowers; after a hard day's work I went to midnight train, no flowers. Next morning from seven to nine my customers to whom I promised flowers came pouring in; result, mad, disappointed people. The writer was called everything but a gentleman. Lo and behold, at half past nine the Adams Express came tearing up with eighteen dollars' worth of flowers C. O. D. They were refused. I forgot to mention that the R. R. time between here and Chicago is about an hour and a half. I never wrote the house, the house never wrote me, although we traded and trusted each other before this time. I often asked myself the question since then, who lost the price of those flowers, the grower or the house? I could ask lots of other knotty and nighty questions, but I will leave it to the readers of the FLORIST who are the biggest sinners?

Elgin, Ills. B. O'NEIL.

[What bearing all this has upon the notes we made in our issue of the 8th ult. we are quite unable to see. If Mr. O'Neil will read them again he will see that we referred only to shipments made to parties regarding whose responsibility the shipper has no information. The case cited by our correspondent was judging from his statement, a very peculiar one indeed, but it has not a particle of bearing upon the comments made in our issue of the 8th.—Ed.]

is now published and may be ad on application.

FRED. ROEMER,
SEED GROWER

Quedlinburg, Germany.

THE LATEST AND GRANDEST NOVELTY OUT.

NELLIE LEWIS CARNATION.

Flowers very large and full, and of a color never before seen in Carnations—AN EXQUISITE SHADE OF PINK.

For decorative purposes and corsage bouquets, they are unsurpassed. A bowl filled with them used at a dinner a short time ago, lighted up the entire table. Don't fail to place your order at once, as we control the entire stock and have only a limited number of plants.

Price, 50 Cents each; Three, \$1.25; Six, \$2.25; Dozen, \$4. Wholesale rate on application.

VICK'S SEEDS NEVER DISAPPOINT, is the verdict of the millions who have planted them.

VICK'S FLORAL GUIDE for 1891, contains over 100 large pages, hundreds of illustrations, colored plates, Best Novelties, all worthy of cultivation; \$1.00 and \$2.00 cash prizes. Price, 10 cents, which deduct from first order and it COSTS NOTHING.

JAMES VICK, SEEDSMAN, ROCHESTER, N. Y.

FRED GREIGHTON.

ROOTED CUTTINGS of this Superb Pink Carnation, \$5.00 per hundred; \$4.00 per thousand. From the original stock, which has not been forced or in any way made to produce an extra quantity of CHEAP Cuttings at the expense of the future well doing of the same.

To give all a chance to see what kind of flowers this stock produces, I will send a few florets, free of charge, to any in the trade who apply to me by letter.

PURE NATURAL SHEEP MANURE.

The richest and most nutritious food for plants, seeds, etc., used in the pulverized or liquid form the results are marvelous. In the culture of Narcissus it can not be equaled. Hundreds of testimonials from well known growers.

WM. ELLIOTT & SONS,

54 and 56 Dey Street, N. Y.

THE CHEAPEST AND BEST OF ALL.

FIR-TREE OIL

INSECTICIDE—soluble.

FOR PLANTS.—To make a solution for washing

or cleaning purposes.—Half a Pint of Fir-Tree

Oil to ten gallons of water.

For Green and Black Fly, Thrip, American Blight,

Woolly Aphis, etc.—Half a Pint of the Fir-Tree Oil

to two or three gallons of water, or two or three

tablespoonfuls to the pint.

For Red Spider and Coccinellid.—Half a Pint of the

Fir-Tree Oil to two gallons of water, or three table-

spoonfuls to the pint.

For Mealy Bug, Brown or White Scale.—Half a

Pint of the Fir-Tree Oil to four or six quarts of

water, or two or three gallons of water, or two or

three tablespoonfuls to the pint.

For Ants, Grubs, Worms, Wood Lice, etc. in the

Soil.—Half a Pint of the Fir-Tree Oil to two gallons

of water.

The most efficacious way to use Fir-Tree Oil in

small quantities is to apply it with one of HITCHES'

APPLICATORS.

When applied to the roots of delicate plants the

soil should be drenched with clean water immedi-

ately afterwards. In all other cases washing is not

necessary. Used with warm water it is quicker in

its action than when cold is used.

Soil or rain water is necessary, and Applied in

Wood, Tin or Pot Vessels.—Galvanized Iron Vessels

must not be used.

FOR ANIMALS.—For Skin Diseases and Killing

Vermin mix one part of Fir-Tree Oil with three

parts of warm water and wet the affected part each

day. In some cases it may be used stronger. For

Ringworm apply full strength with a brush each

day.

FOR WASHING DOGS.—Put a large coffee

cup full of Fir-Tree Oil in a pail full of warm water

and use a piece of coarse soap to make a lather.

FOR MANGE apply with a brush full strength

every day.

FOR BIRDS INFECTED WITH PARASITES.—Put a

tablespoonful of Fir-Tree Oil in one

quart of warm water and dip the bird in it, taking

care that its eyes are protected, hold the bird in one

hand for one or minute, then dip into clean tepid

water; this may be repeated. If necessary a much

weaker solution may be used with a spray producer.

FOR EGGS.—Put Fir-Tree Oil to be brushed into

the crevices, or a solution of it, ne part of three

of water applied to the inside of a brood.

FOR NITS IN CHILDREN'S HAIR.—Mix

one part of Fir-Tree Oil with three parts of warm

water and apply with a comb or brush, the hair can

be washed shortly after.

FOR WASHING FLANNELS AND UN-

DECOLORING.—Put a wine glass full in ten

gallons of water for steeping, the same may be put

into the boiler. Common soap may be used but no

other preparations.

Sold in Bottles, half pints 15 cts; pints 25 cts; quarts

45 cts; half gallons 75 cts; gallons 1.25 cts.

Drums, 5 and 10 gallons each, at 1.75 per gallon.

Manufactured by E. GRIFFITHS HUGHES,

VICTORIA ST., MANCHESTER, ENGLAND.

READY IN FEBRUARY.

CHRYSANTHEMUM CULTURE FOR AMERICA.

History of the Chrysanthemum;
Classification and Care.

By JAMES MORTON.

An excellent and thorough
book; especially adapted to the
culture of Chrysanthemums in
America. The chapters include

Oriental and European History.

American History. Propagation.

General Culture.

Exhibition Plants.

Insects and Diseases, Sports and

Other Variations.

Chrysanthemum Shows and

Organizations.

Classification.

Varieties for Various Purposes. Calendar of Monthly Operations.

Thus it will be seen that the author covers the field
quite thoroughly. No other book yet published on this
subject approaches this in special value for American
lovers of the "Queen of Autumn." Illustrated. Pages, about 120.

PRICE, Cloth, \$1.00; Paper, 60 Cents.

THE RURAL PUBLISHING CO., Times Building, NEW YORK.

FLOWER SEED.

CHOICEST STRAINS FOR FLORISTS.

1891 trade list now ready and
mailed free on application.

AUGUST RÖLKER & SONS,

136 West 24th Street,
NEW YORK, STATION E.

PLANT BED CLOTH.

CHEAP SUBSTITUTE FOR GLASS ON Hot-
beds, Cold Frames, etc.

Light, Medium, Heavy.

Used by Florists, Gardeners, etc., invaluable
for Tobacco Growers. Protects from frost.
Promotes hardy, vigorous growth and keeps beds
warm, will not shrink or mildew. For sale by the
leading Dry Goods houses, Seedsmen, Florists, etc.
Well known and extensively used. For circulars
and samples, apply

WE SEEM to be gaining many admirers in European countries. Our list of subscribers in England and Holland especially is continually growing.

IN THIS ISSUE we give a list of coming exhibitions of which we have up to date had information. If any for which dates have already been announced have been omitted we trust that we shall have prompt notification. And as dates are decided upon we ask prompt advice of same that the list may be complete.

Boston.

The demand for roses has been far in excess of the supply during the past week. All varieties have been equally scarce and there has been a ready sale for everything in the rose line provided it was of good quality. Carnations, violets and other staple flowers have also felt the effect of the rush and have sold well. Smilax has suddenly become very scarce and the price has doubled within a week. This is a welcome change from the inactivity of the preceding month, the only unfortunate feature of it being the short time that will elapse before Lent comes in and puts a damper on everything.

The annual supper of the Gardeners' and Florists' Club took place at the Quincy House on Thursday evening, Feb. 5. About 125 gentlemen participated, among the number being several invited guests. Washington was well represented by Mr. Benj. Durlie, who visited the club on this occasion for the first time. Mr. Sam'l Henshaw, of Thompson, Conn., Mr. W. A. Manda, of Short Hills, N. J., Judge C. W. Hoitt, of Nashua, N. H., Mr. T. O'Connor, of Providence, R. I., and Mr. T. McCarthy, Supt. of Swan Point Cemetery, Providence, were among the guests from outside the state. Other invited guests present were President W. H. Spooner and Secretary Manning of the Mass. Hort. Society, Mr. W. C. Strong, Mr. Chas. Storer, Mr. John Fottler and others. President Foster of the G. and F. Club presided, and vocal music was rendered by the Haydn Male Quartette. Many letters and telegrams of congratulation were received and read by the president during the evening. These were from the Toronto Gardeners' and Florists' Club, Chicago Florists' Club, Society of Indiana Florists, Buffalo Florists' Club, Mr. John N. May, M. A. Hunt, Wm. Scott, John Chambers, Geo. C. Watson, D. D. L. Faxon, W. R. Smith and many other well known gentlemen. On the reading of the dispatch from Toronto three rousing cheers were given for the Toronto Club. Entertaining addresses were made by the visitors and many of the local lights. The reading of a number of bogus telegrams by Judge Hoitt caused much merriment, and Mr. Robert Farquhar read an original poem which showed him to be a poet of no mean attainments. The whole affair was a great success and reflected credit on the young men who served the club as the committee on this occasion.

On Saturday, Feb. 7, Mr. John Thorpe read a paper on "chrysanthemums" before the Mass. Hort. Society, the popular interest in the lecturer and his subject being evinced by the large audience which nearly filled the lower Horticultural Hall. The discussion which followed the essay was very interesting and brought out many instructive points.

On the exhibition table were some fine camellia flowers from Jas. Comley, and a variety of carnations from R. T. Lombard, including a vase of his handsome yellow seedling, as yet unnamed. A vase of splendid mignonette from Dailedouze Bros., of Flatbush, N. Y., was greatly admired. Jackson Dawson showed a lily recently received from Formosa, believed to be a new species. W. J. S.

New York.

Business continues to be very good, everything on a rush as if society was racing with Lent. There were many notable weddings here during the past week and every florist seemed to have got his share of the work, many of the homes and churches were lavishly decorated.

The decorations for the wedding of Miss Louise Shepard to Mr. Wm. Jay Schieffelin were very gorgeous, Miss Shepard being a Vanderbilt grandchild. The wedding breakfast and reception was at the home of the grandmother, Mrs. W. H. Vanderbilt. The decorations here by Hodgson were very beautiful, Madame Cusin and Madame de Watteville roses being the principal flowers used.

The church where the ceremony was performed was also handsomely decorated and there were very many beautiful floral congratulations sent. A novelty seen on this occasion was the boutonnières worn by W. K. Vanderbilt's coachmen, composed of fifty lily of the valley arranged in a round flat boutonniere and a rosette bow of No. 9 white satin ribbon hanging from the bottom with a loop of ribbon at the back to tie on the button; these put a royal touch to the procession.

There were numerous dinners and receptions and Thorley and Scallen and Butler were kept very busy with them while some bouquets made by Mr. Hafner of W. H. Browers, were simply grand. Mr. Hafner is one of New York's best artists, his fine work wherever seen can always be identified. The uptown florists were also very busy. The general aspect of affairs is more encouraging and the general opinion is that we shall have a very good Easter and spring season.

The cold snap during the past week made an impression on roses, but the abundant supply of all kinds of spring flowers made up any deficiency.

Daffodils and narcissus are very good and very plentiful; the same may be said of all bulb stuff. Freesia very abundant. Carnations very fine, plentiful and selling well.

In answer to Mr. Chitty I can only say that I have never been able to test the keeping qualities of Lamborn as they were always quickly disposed of.

Hybrids are coming in unusually fine and selling well. Mr. Christy, of Stamford, Conn., is shipping some very hand-

some Mrs. John Laings at present. This rose is very popular among the debutantes and an especial favorite with Mrs. Cornelius Vanderbilt.

It was Mr. J. Hammond (and not Mr. Hunter as stated in previous letters) who has leased the Buchanan store at 5th Ave. and Thirty-seventh St. It is in a good locality and Mr. Hammond has been there before.

Alphonse & Co. have opened a floral establishment at 39th St and Sixth Ave. Mr. Chas Ammann Jr. has opened up again on 125th St.

The negro that robbed Phil Reuter (one of Klunder's men) of \$140 has been sentenced to states prison for 7 years.

Smilax in great demand owing to the many decorations on hand.

Mr. Chas. Anderson's Perle continues climbing the ladder of fame. Mr. Anderson expects to exhibit a vase of this fine new rose at the coming exhibition.

Violets are plentiful and selling fairly well. There are a few poinsettias coming in yet and are quickly sold.

Chas. Zellar of Flatbush is the owner of a remarkably fine strain of *Primula chinensis*. He is undoubtedly the best seen here in years.

Orchids, particularly cattleyas, are plentiful and very popular just now.

There are some fine azaleas coming in already. Mr. Jas. Dean of Bay Ridge has a beautiful stock of them coming in for Easter.

Dutch hyacinths are very poor so far. Tulips are very good. JOHN YOUNG.

Chicago.

Business considerably improved. Supply of roses not sufficient to supply demand. Large increase in orders from outside points. The total consumption of flowers through this section of the country has probably not increased to any great extent, but the change in the weather having greatly lessened the cut, florists who have had their home supply cut down are sending to Chicago to fill out their orders. Quality of most flowers now in the market is fair only.

There is a large surplus of smilax in the market. Hardy ferns seem to have taken its place to a considerable extent in arrangements, and decorations where smilax would be useful have been few. Otto Ristow says he shall pull out his smilax and devote the space to roses another year.

J. F. Klimmer at Oak Park has sold out to Otto Gorke. Mr. Klimmer may build another place.

Mr. Chas. H. Fisk thinks that it might be inferred from previous notes in this column that Mr. Otto Ristow has an interest in his wholesale commission business, and desires us to state that while he and Mr. Ristow are partners in the retail establishment at 149 State street, Mr. Ristow has no interest whatever in his wholesale business.

Otto Ristow of Bowmanville has been very successful with the American Beauty until this year, but this season it has been a total failure with him. His Merrets, Brides and Guillotts have however done better than ever before, producing some of the best blooms he has ever grown. Perles Jardins has grown well, but the blooms have been both few and inferior in quality. Papa Gontier has done splendidly with him this season. He has them in a house by themselves and grows them cool. He finds this sort from 30 to 35 per cent more profitable than Bon Silence. With him the Gontier does not drop its leaves any more than any

other rose. A neighboring grower who has attempted to grow the Gontier in the same house with other sorts has been quite unsuccessful with it and Mr. Ristow is convinced that success can be attained only by growing this rose in a house by itself and keeping the temperature down to about 50° which would not suit most other varieties.

John Readon until recently with Samuel Muir, has removed to Pleasant Hill, Mo., having entered the employ of Geo. M. Kellogg at that place.

Philadelphia.

Mr. John Smith's essay on "How to Grow Mushrooms" read at the last meeting of the Florist Club was excellent. It dealt mainly with the methods of culture on a gentleman's estate, modestly refraining from treating the subject from a commercial standpoint as he does not claim to have experience in that direction. This want was supplied however by Mr. McCaffrey of Moorestown, N. J. who proved a good talker when he got started, as also by Mr. John E. Andre of Doylestown and Mr. James Gibson of the same place. Mr. Andre showed samples of button mushrooms cut at random from one of his beds. They were very fine. The crossing of swords between the different growers present was very interesting. The club thought there was a good deal more to be learned about mushroom growing than could be unearthed in one evening and so Mr. Gibson was appointed to prepare and deliver a paper on mushroom growing from a commercial standpoint at the meeting to be held in March.

Trade has very much improved. For the past two weeks all the florists have had good business. The second Assembly Ball to which only the "Four Hundred" are invited, came off on Friday evening. The very choicest flowers are used for the bouquets which are presented to the belles on this fashionable occasion.

The orchids grown around this city are readily disposed of. It is not very long ago that one of the leading florists complacently stated that a pansy was quite as much appreciated in this city as an orchid. It is a pleasure to be able to report progress at this time for orchids, especially cattleyas and cypripediums are in good demand.

Messrs. Evans & Battles had a novel dinner table decoration recently. Rose petals were liberally and at the same time artistically strewn about the table. We are assured that the price paid was very liberal. This is one way and a profitable one to use up the surplus roses, and these little "fads" are worthy of encouragement. E. D. W.

New York Floral Notes.

At the ball given by Mrs. William Astor on January 26 there was a display of flowers made by Klunder, which was the handsomest seen this season. There were tall vases on each side of the door containing fine cactus plants, which were elaborately trimmed with ivy and begonia blossoms. A little ways from these and in front of the parlor door was a large vase full of cattleyas, which were the Triana kind, and were extremely delicate and handsome. Fine ornamentations of lilies and roses beautified a mirror which was in the hall, and on one side was a small room in which on the table in the center were two azaleas of white and pink varieties which looked very beautiful. In

the hall at the staircase was a group of palms and a handsome basket of flowers containing poinsettias, cinerarias and cyclamens, which looked very handsome among the dark green leaves of the plants. Among this group of palms was a large lilac bush, a fine orange tree ten feet high covered with oranges, and on the other side of this group orchids were placed on the banisters of the stairs and a bunch of lily of the valley. Nearly opposite these plants was a large side table covered with spring flowers. Primroses, cinerarias and lily of the valley were the flowers in this large mass. Eight orange trees and several plants of lilac were distributed throughout the hall, and at times the bottoms of these trees were covered with yellow tulips.

The front parlor mantelpiece was effectively decorated with lygodium being placed down its center with here and there a handsome orchid twined in among it. These sprays were run into vases at the sides which were filled with fine orchids. On the parlor tables were bouquets of lilies and Papa Gontier roses. In the picture gallery the center of the room directly under the chandelier. This was beautifully trimmed in the center with a mound of cattleyas with which the drapings from the chandelier of Lygodium scandens was gracefully twined about. The picture gallery where the dancing took place was well decorated, there being garlands at equal distances on the sides of the wall. The mantelpiece and balcony where the musicians were were handsomely draped with scarlet tulips; the favors were placed at one side among Marguerites, handsome grasses and pretty greenery. Opposite the favors was a beautiful statue of the water nymph, which was handsomely decorated with Cusin roses. There was a great number of La France roses in bouquets in this room which looked very well all the evening, for these roses keep finely.

The decoration for Mrs. Mill's ball was done by Mr. Hall, of S. J. Burnham & Co., and was one of the handsomest displays of orchids this season. The pictures were all removed from the parlor and in their place were frames made of Lygodium scandens and other handsome greens, and in these were placed orchids mostly of the cattleya family. These pictures were really a study of beauty. There were vases of handsome Laing roses on the mantelpieces. Large bunches of violets was the favor given to each lady. Mr. Hall has had an order for a dinner decoration of English primroses. The very best were hard to get at this season, but at last succeeded and the table was most beautifully decorated with this scarce but desirable primrose.

Siebrecht & Wadley decorated the home of Miss Robbins, who married Mr. McVicker on the 14th inst., most beautifully. The church where the wedding occurred was banked on the altar with Liliun auratum and American Beauty roses, which was its only decoration, but which was greatly admired. At the house there was a wedding bell, the ropes of which were of white roses, with pink roses at the end for tassels. These were twined into vases of lilacs, which made a very pretty decoration. The dining room windows were filled with plants of which there was much poinsettia bloom. This firm is showing some fine plants of Erica Willmoriana which are brought over from England and are now in bloom, of a sea shell pink color on every stalk. They have soon been sold. Last night's stella, which have come out very large and finely. The flowers are pure white

VARIOUS FLORAL ARRANGEMENTS

with the exception of a rich dark plum purple deep in the throat. There are 200 plants of phalenopsis in blossom at the Rose Hill Nurseries, which are supposed to be the finest lot in cultivation in this country.

F. A. BENSON.

Various Floral Arrangements.

No. 1 shows a vase arranged by Klunder for Mrs. Astor's ball. A large decorated vase on an ebony stand was placed in the entrance hall in front of the drawing room door. This was filled with a variety of orchids, cattleyas, kelias odontoglossoms and a few oncidiums and cymbidiums together with asparagus and other vines. This was beautifully arranged and showed off each orchid flower to perfection.

No. 2 is a table decorated by Mr. Brower of Thomas Burns & Co. There were three vases on this dinner table, the central one being somewhat larger than the others. These were filled with Cusin roses, arranged loosely so as not to obstruct the vision from the other side of the table, while trailing around these was a line of Cusin roses forming graceful curves. The spaces between contained fronds of adiantum; the ladies' places had each a long-stemmed rose, and the gentlemen had each a boutonniere of Roman hyacinths, made of a number of single blossoms bunched together. This was fastened in the fold of a napkin.

No. 3 is a canoe basket made by Scallen. This is a large canoe of braided rush filled in the centre with Cattleya Triane, and these same flowers on the blades of

the paddles also. The edge of the canoe was trimmed with white lilacs. It is an exceedingly beautiful piece and can be filled with growing plants if it is so wished.

No. 4 is Mr. Hanft's four-leaf clover basket. This is a large sized basket in the form of a four-leaf clover, its leaves are turned up and edged with white lilac; the spaces between the leaves being filled with flowers; Cattleyas in one space, La France roses in another, American Beauties in the third space and Violets in the fourth. The handle is trimmed with roses, foliage and white lilacs. F. A. B.

The Badge Business.

ED. AM. FLORIST:—In your account of the meeting of the Executive Committee of the S. A. F. at Toronto occurs the statement that "the Executive Committee finds that this plan (the numbered badge plan) in its present shape is impracticable and inadvisable." This means, of course, that it is dropped again.

Now I would refer these gentlemen to the proceedings of the society at its Buffalo meeting, not to speak of any previous discussions or recommendations on the subject. On pages 18 to 21 of the 1889 report will be found some interesting reading in this connection, ending with the following action:

"Mr. J. M. Jordan moved the acceptance of the report. (This was my report as chairman of a Committee to prepare a plan, and contained a definite and practically-found successful scheme for the purpose.)

"Mr. H. A. Siebrecht, of New York. I

would like to embody in the motion a provision that the necessary amount of money be appropriated at this meeting to carry into effect the recommendation made by Mr. McFarland so that at our next meeting the plan may be in operation. * * *

"Mr. Jas. Hendrick, of Albany. I rise to express my full approbation of the plan proposed by Mr. McFarland, and to ask that the report, as read, be accepted, and the details of it referred to the Executive Committee to be carried into effect next year. * * *

"Mr. Jordan. I accept the suggestion as a modification of my motion.

"The motion prevailed without objection."

Thus it appears that the Executive Committee was instructed, not recommended, to carry out the plan as outlined in the report of the committee appointed for that purpose at the New York meeting. Now did they do it? Let us see.

After the January meeting of the committee in 1890, I was informed by the secretary that \$25.00 had been appropriated for the carrying out of the society's directions in regard to the badge matter, and that I was selected by them to do the work. I informed the secretary that the amount was probably entirely inadequate for the purpose, and suggested that it would be well to so inform the committee. Not hearing anything further and being very busily occupied, I gave the matter no further attention until within about eight weeks of the Boston meeting, when some communication was had with the secretary of the society showing the actual expense of the work

and making certain proposals for its carrying out as per instructions, with the idea that the expense would be borne by the society which had ordered the work. No one would do anything, and it was quite evident that at least some of the officers of the society were thoroughly hostile to the plan. In fact, it was intimated to the writer by one member of the Executive Committee that the appropriation of so small a sum for carrying out this important work was designedly made insufficient.

This was not the first time that a vigorous effort had been made to get this matter tried at least. The previous year the writer offered to bear all of the expenses connected with the plan save the mere sending out to members, providing the officers of the society would father it and insert the plan in the official programme. This they positively declined to do.

Now with the above statements of absolute facts, I respectfully submit that the Executive Committee has gone beyond its authority. I see nothing in the constitution of the S. A. F. which authorizes the Executive Committee to positively refuse to carry out plain and simple instructions of the society in its general meeting assembled. The statement that the "plan in its present shape is impracticable and inadvisable" admits of considerable inquiry, as the plan has not been tried by the S. A. F. at any time or in any shape, and has proven a thorough success with the only other cognate society which has tried it, the American Association of Nurserymen. This last assertion is abundantly verified by the statements of our own members at many meetings and is well known to be thoroughly true.

The writer has been fighting this battle for four years. Last summer, after the practical refusal to carry out instructions by the Executive Committee, he was advised by a prominent member of the society, and one of its most honored past officers, to carry out the plan himself and take advertising to pay the expense. Although this was entirely practicable and might have been profitable he refused, as he thought the general sense of the society was in favor of the plan as evidenced by its unanimous vote in favor of it and that they would unquestionably see it through. Now what is to be done? If it is to be dropped, what is the conclusion? Is the committee greater than the society which gives it birth? If so, let the rank and file of the S. A. F. know it.

J. HORACE MCFARLAND.

[We think it fair to the Executive Committee to explain their views as stated at Toronto to be in substance these: Chairman McFarland had in 1889 offered to do the work free; for 1890 they offered him \$25.00. This he neither positively accepted or positively declined until very near the 1890 meeting; too near to arrange for more money to do the work. The responsibility of issuing orders to go ahead for 1891 and making another appropriation for the same, the committee did not wish to assume. Doubtless Secretary Stewart can and will make all these much more clear having the subject fully in hand.—Ed.]

Vanda Amesiana.

This beautiful new vanda is the companion plant to V. Kimballiana, both varieties being introduced from the northern part of India, by Hugh Low & Co., of London.

Sepals and petals pure white, with lip

slightly tinged with purple; each flower measuring about two inches in diameter.

It seems to be a very easy growing variety, the temperature of the cattleya house suiting it admirably.

I think it will be a fine thing for florists' use when it becomes cheap enough for them to handle. I consider it one of the most beautiful orchids of recent introduction.

GEO. SAVAGE.

We give below some extracts from the discussion which followed the paper on roses read by Mr. J. N. May before the Mass. Hort. Society at Boston, Jan. 24, and which we printed in last issue:

Michael H. Norton asked whether Mr. May found a ready sale for his roses, and for what class.

Mr. May replied there is no difficulty in disposing of such roses as those on the table, though you cannot always get the best prices for them. There is no question that roses and other flowers are a luxury, which cannot be afforded by all. He had seen 37,000 roses in the market at 9 o'clock, of first quality, and at 11 o'clock only 3,000 of them were left. A year ago roses brought from fifteen to twenty-five dollars per hundred, and this year not much more than one-half as much. When the market is overstocked, the second quality have to be sold to street fakirs, and some one gets the advantage. For his part, said the speaker, he would never see a flower consigned to the ash barrel, but would rather have surplus flowers sent to the hospitals, etc. He would like to have ways and means by which growers could dispose of their surplus stock profitably; one way to prevent an overstock is to grow better flowers. Nothing injures the flower market more than to have a lady buy flowers from twenty-four to forty-eight hours old, and which fall to pieces soon after she gets them home.

Mr. May said that there was no room in New York for poor roses. Which are most profitable depends very much on who raises them. Ma Capucine is one of the most lovely, and brings in the most money by twenty-five per cent.

In answer to an inquiry concerning the Ulrich Brunner rose, Mr. May said that New York market is a ticklish place. General Jacqueminot was most popular for several years, and then ladies took a notion to yellow roses, and when the tide turned again in favor of red roses, a neighbor of his who had hung onto his old favorite (Jacqueminot) was the only one who had red roses. Ulrich Brunner has always been in demand in New York, but not quite so much this year as in previous years. One grower, who had a fine house, found some difficulty in selling them. From the middle of January onward there is no difficulty in selling really fine specimens of this variety, but they must have stems two or three feet long and the flowers must be four or five inches in diameter. Mrs. John Laing is one of the most popular roses in New York; it is fragrant and sure blooming, but cannot be forced for Christmas.

William C. Strong inquired how benches answered for forcing hardy roses. His experience had been with them planted in solid beds, two, three or four years, and he doubted whether it would pay to plant every year.

Mr. May said that the trouble comes here if ladies get a fair rose to-day they want one earlier next year, and they cannot be forced earlier in a solid bed, though for March blooming it will do and they will last for years. He had seen a greenhouse 18 feet wide and 210 feet long, filled with General Jacqueminots planted eight or nine years, where 237 buds were counted in a space two feet square, and 37,300 buds were cut from that house.

In answer to an inquiry concerning the introduction of new roses, Mr. May said that twenty-five years ago he was growing roses in England, and they used then to get their new varieties mostly from France. One autumn he went over to France and visited M. Pernet, one of the great rose growers, who showed him several new varieties to be sent to England, and some others, inferior to them, which were thought good enough for the American market. Two years ago he paid a French grower \$530 for new roses, at \$5 per plant, and they all went into the rubbish heap in six months. (Once in a while we strike such a gem as C. Mermet, the finest of all tea roses.)

An inquiry was made in regard to the Anna Alexieff and Heinrich Schultheis roses. Mr. May said that the former is almost as old as himself, and, as grown around New York, is most prolific for early forcing. Heinrich Schultheis is one of the finest of all for early forcing, though discarded in France and England. It is every way superior to Magna Charta, which goes off in color when forced, and has failed to come early. Mr. Assmus, one of the best New York growers, has failed with it for very early, but has fine ones coming on now.

President Spooner said that Heinrich Schultheis is very fine in the garden. Anna Alexieff is not so good in the garden being too shortpetalled; its only merit is its earliness.

In answer to the question, What is the best Tea rose? Mr. May said that of Tea roses without any admixture, the Bride is unquestionably the best. Of hybrid Teas, the Duchess of Albany is best; it is of magnificent color, clean all the way through and fragrant. If too much heat is given, it becomes purple.

Patrick Norton said that the Ulrich Brunner rose finds a good market in Boston.

President Spooner said that the Ulrich Brunner is fine in the garden.

John G. Barker had hoped for a paper on the rose as a bedder, he was more and more impressed with the view that we can make our gardens more beautiful with more flowering plants and fewer foliage plants. He had a bed last season planted with La France roses, surrounded with Hemosa and Agrippinas; it was not as satisfactory as he hoped; but the field is still open.

President Spooner mentioned among the newer roses, Gloire de Margottin, of dazzling red color and Gloire de Lyonaise, of lemon color, but a Hybrid Tea rather than a Remontant.

Mr. May said that he felt much enthusiasm over the Gloire de Margottin; it is of a most glorious color. As regards forcing, he was rather disappointed with it; it has a weak stem but is one of the finest for summer bedding. All like the color. Gloire de Lyonaise was a disappointment to him.

VANDA AMESIANA

In answer to an inquiry concerning grafted roses Mr. May said that he was a great advocate for roses on their own roots. If a plant of La France on its own roots is killed down it will sprout again from the root, but you can not get so large a plant the first year as if grafted. If a lady sets out a dozen plants on their own roots she will have good bushes a dozen years hence, but if she sets out grafted plants she will have in two years a lot of Manetti stocks. A neighbor of the speaker's planted thirteen years ago twenty-five La France on their own roots, they are now six feet high, and last July he cut two hundred flowers from them.

F. L. Harris said that if we import roses budded low down and plant them deep they will stand our climate well and in one year give more flowers than plants on their own roots will give in two years. Once in a while we get suckers from the stock, but any one who studies the character of the shoots can remove them. The speaker would not, however, like to

have plants budded five or six inches high.

President Spooner said that he was a strong advocate for budded roses, if budded in the right place and properly grown. They should be planted so as to have the stock three or four inches beneath the surface, and the bark should be raised a little on each side; you will then get a better plant in one year than in three or four years if they are on their own roots. The Manetti stock is the best for light soils; the briar sends up too many suckers. All the best roses that come to our shows are from budded stocks. He does not want to wait four or five years to get a strong plant.

Among the best summer roses are La France, and for later Fisher Holmes or Prince Arthur, (the last named a seedling from General Jacqueminot), Heinrich Schultze and Lady Helen Stewart. For white, Merveille de Lyon and Mabel Morrison, Gloire de Lyonaise throws up fine shoots. Madame Victor Verdier is a grand garden rose. Alfred Colomb is a globular form and high scented. Mme.

Isaac Pereire, a Hybrid Bourbon, is a good climbing variety. Earl Dufferin has a full flower and is destined to be one of the best. Marshall P. Wilder is too much like Alfred Colomb. Mme. Montet is a free flowering variety and of very fine color. Mme. Gabriel Luizet is very desirable for this purpose. Mrs. John Laing is almost as free flowering as General Jacqueminot.

Mrs. H. L. T. Wolcott asked the president if when budded plants are set out as recommended by him you do not virtually have a plant on its own roots; to which he answered yes. Mrs. Wolcott went on to say that a good while ago she planted budded roses under the direction of the late Herman Grunzel, who advised her to lay them down so that they would root from the grafts, and she saw them twenty years afterwards and never saw better bushes or a better show of flowers.

Coming Exhibitions.

March 17-20, Philadelphia.—Spring exhibition Pennsylvania Hort. Society.

March 25-27, Boston.—Spring exhibition Mass. Hort. Society.

April 7, New York.—Spring exhibition New York Florists' Club.

Catalogues Received.

John R. & A. Murdoch, Pittsburg, Pa., plants, seeds and nursery stock; Joseph Breck & Sons, Boston, seeds and plants; H. Cannell & Sons, Swanley, Kent, England, plants; same, seeds; A. D. Cowan & Co., New York, seeds; United States Nurseries, Short Hills, N. J., orchids; same, dahlias; same, descriptive catalogue of their flower show last November; same, chrysanthemums and single dahlias; Henry Kaufman & Son, Springfield, O., plants; E. G. Hill & Co., Richmond, Ind., quarterly wholesale list plants; V. H. Hallock & Son, Queens, N. Y., retail seeds and plants; same, trade list seeds and summer flowering bulbs; Wm. Stahl, Quincy, Ill., nursery stock; Denys Zirnigle, Needham, Mass., carnations and pansies; Wood Bros., Fishkill, N. Y., trade list plants.

Duty on Seeds.

Please let us know through your paper how much duty on a pound of seeds from Europe by the new bill.

A BUFFALO SUBSCRIBER.

[If flower seeds nothing. If vegetable seeds, 20 per cent on invoice value. Some agricultural seeds are free.—Ed.]

A SPECIMEN BLOOM of a seedling carnation has been received from Mr. John Moore, Little Silver, N. J. It is of good size, dark pink lightly striped with lighter shades, and fragrant. It may become useful but for a cut flower sort a solid color is usually preferred, though this is certainly a pretty flower.

News Notes.

BARRIE, ONT.—McVittie & Browne have succeeded Morgan & McVittie the florists here.

FREDERICK, MD.—Erase from the directory list of this place Hahn & Tyerary and Cyrus Helenstein.

NEW BRITAIN, CONN.—A paper on tuberous begonias will be read at the next meeting of the Horticultural Society to be held March 1.

PROVIDENCE, R. I.—Miller Brothers & Chapell, the florists of Springfield, Mass., have opened a branch store here, at 307 Westminster street.

BARABOOK, WIS.—William Toole's greenhouses were completely destroyed by fire the night of February 3. The loss is quite heavy with no insurance.

THOMASVILLE, GA.—We don't need fire heat to grow flowers here this winter. Outdoor roses are in full bloom and every thing has the appearance of May.

WILMINGTON, DEL.—Harry P. Potter has succeeded James N. Lewis & Bro., the florists at 24th and Market Sts., having purchased the business from them.

RAY CITY, MICH.—The new horticultural society is increasing in membership rapidly and it is probable that a chrysanthemum show will be arranged for next November.

LOUISVILLE, KY.—The table decorations at the recent banquet at the Commercial Club, arranged by florist C. W. Reimers were freely praised by the local press. Orchids were used among the other flowers.

LOS ANGELES, CAL.—At the meeting of the Southern California Florists Society held February 9, a very interesting paper on aquatics was read by Mr. E. D. Sturtevant, the well known grower of aquatics at Bordentown N. J. and this city.

CONNELLSVILLE, PA.—P. R. McDuff rebuilt his establishment last fall on a new location about three miles from his old stand. He has one house 20x100, two plant houses 20x55 each and one 11x55, headed by a No. 8 Herendeen steam boiler.

BROOKLYN, N. Y.—A local daily tells an awful story on a prominent citizen who paid \$4.25 for a half dozen fine large bulbs of a peddler who claimed they were a rare variety of waterlily. The gentleman has just discovered that they are the simon pure skunk cabbage.

SPRINGFIELD, MASS.—Miller Brothers & Chapell, the florists of 263 Main street, have opened a branch store at 307 Westminster street, corner of Walker street, Providence, R. I. It is a large store with show windows and entrances on both streets. Charles K. Miller will have the management. C. F. Fairfield is cutting some fine roses, and says they are better and more plenty than ever before in this city. Business here is better than last week and the stock of flowers is being used up pretty close from day to day.

SUMMIT, N. J.—On Tuesday, January 20, the members of the New Jersey Society Florists' Club at a special meeting preferred their late secretary, Mr. Alfred Dimmock (who had to resign his position on account of going to England very shortly) with a gold watch and chain in token of their esteem for him and the

great interest Mr. Dimmock had taken in the club. From the date of its inception he has been one of the leaders in all movements which would be to the interest of the members generally which was acknowledged by the presentation of the above token.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion must be accompanied by order. Plant ads not admitted under this head.

DAISY SNOWFLAKE

Daisy Snowflake—This Daisy, if treated like Violets will give splendid results. It labor bested upon for 20 years, and the thousands and cannot supply the demand for cut flowers, as it keeps fresh from 2 to 3 weeks, and being cut and then looks as fresh as other white flowers just cut. The flowers are borne on long stems, being cut and beautifully quilled, and average as large as a 50 cent piece; a great acquisition to florists.

Price, \$1 per dozen free by mail \$5 per 100 by express.

SEE WHAT F. J. KELLER SAYS ABOUT THIS DAISY: ROCHESTER, Jan. 28th. Daisy Snowflake is quite a useful flower both for floral designs and put in with cut flowers, and when tied up in small bunches they sell very rapidly with for funeral designs. We use a great many in place of carnations as it is cheaper and covers almost the same space, and keeps fresh so durable longer. Be sure and send me every Daisy you can cut, as I cannot get them fast enough for my customers. I have been cutting and selling them because it keeps fresh for 2 to 3 weeks, I feel I cannot say too much in favor of this useful Daisy. F. J. KELLER.

— ORIGINAL AND LARGEST GROWERS OF —

LILIAM HARRISII, BETTER KNOWN AS THE BERMUDA EASTER LILY.

— BULBS NOW READY FOR DELIVERY. —

THE BEST IN THE WORLD FOR FORCING FOR WINTER FLOWERS. WE OFFER ONLY STRONG FIELD-GROWN BULBS FROM OUR OWN GROUNDS IN BERMUDA.

COPYRIGHTED, 1890, BY F. R. PIERSON, TARRYTOWN, N. Y.

From a photograph taken the week before Easter, 1890, showing a view in one of our new iron greenhouses, here at Tarrytown, 20 feet in width by 140 in length, of a crop of Liliam Harrisii in full bloom. This house produced over 15,000 flowers for Easter.

This is not only the best by far of all lilies for winter blooming, but it is one of the most profitable flowers that can be grown by florists. It is very easily handled, and the flowers being especially effective for decorative purposes, always command large prices. From its name some have thought it was a bulb for florists' use for forcing for the Easter market only. This is not exclusively so; it derives its name from the fact that, in Bermuda, grown in the open ground, it blooms at Easter time—hence the name "Bermuda Easter Lily"—but by growing it in this country in the greenhouse, with successive lots, it can be had in bloom all the winter from early in December until after Easter. In fact, by special culture, all the year round, or as long as cut flowers are in demand. The fact that it can be forced into bloom by the Christmas holidays adds particularly to its value, as it is in at a time when flowers are usually scarce and in great demand at high prices, but to accomplish this the bulb must be potted early in August, something depending upon after treatment and the temperature the bulbs are grown in.

For this purpose our Bermuda-grown bulbs are indispensable, as in Bermuda the bulb reaches its highest development, and ripens off perfectly, and is ready for shipment usually by the middle of July—before bulbs in our own country have hardly begun to make their growth. Our bulbs being grown in the open ground, in a climate naturally adapted for their perfect growth, are particularly strong and healthy at any time.

The extent to which this Lily is being forced for winter flowers will be shown by a sale made by us to a large New York grower, who purchased 20,000 bulbs for his own use. We hear it said occasionally that Liliam Harrisii flowers will not keep—this is owing to improper handling. If cut as soon as open they can be kept for more than two weeks, if in a proper place. It bears shipping splendidly, as the two following letters will show. These were written acknowledging the receipt of flowers shipped last Easter.

J. L. Russell, Denver, Colo., writes: "The Lilies came in excellent shape. I don't think I lost one: it is a pretty good recommendation for your packing." The Fort Worth Nursery Seed and Canning Co., Dallas, Texas, writes: "The Lilies arrived in perfect condition, and we must compliment you on your packing. We would not have thought they would have carried so far packed dry."

THIS VALUABLE LILY IS OUR SPECIALTY.

We grow the bulbs by the acre on our own grounds in Bermuda. We were the first to grow it in large quantities and to offer it at reasonable prices, and we have always been recognized by the trade as HEADQUARTERS FOR THE BERMUDA EASTER LILY; supplying the trade as we do, both in this country and in Europe, and we hold by far the largest and the controlling stock of the genuine variety in the market.

The extent of our operations in this bulb alone will be best understood when we state that we expect to sell from OUR CROP of 1890, over

— HALF A MILLION BULBS. —

Be sure you get the genuine Liliam Harrisii. In order to secure "the true variety" purchase your Bulbs from original stock, which is known to be pure. The value of this Lily has led unscrupulous or ignorant parties to plant L. Longiflorum in Bermuda, planting it with Harrisii to increase their stock rapidly when Harrisii was very scarce, thus mixing the stock irretrievably, thereby rendering it absolutely valueless for forcing, and we have known instances where these mixed bulbs have been sold to large growers as the genuine variety, where large loss has resulted, and dealers should look with suspicion on bulbs offered at prices less than market rates, as the supply has never yet met the demand: "Mixed Bulbs" only being offered at reduced rates.

Large growers or dealers in this bulb should write us for special prices, stating quantity of bulbs desired, and we will give lowest estimate on the same by return mail.

F. R. PIERSON & CO., TARRYTOWN, NEW YORK, U. S. A.

OUR FREESIA BULBS ARE NOW READY FOR DELIVERY. They are of unusually fine quality, nearly twice the size of Bulbs usually sent out. Intending purchasers should write us for samples and prices, stating quantity wanted.

Crude Oil for Fuel.

In answer to Mr. Sweeney's inquiry about oil or gas for greenhouse heating, this is the second winter I have used crude oil, and find I make a saving as near as I can estimate of not less than 50 per cent over coal at \$3.50 a ton. The oil cost this season 53 cents a barrel delivered on car here, and I also save the handling of coal and ashes and have no soot or dust.

I have a 20-horse power common tubular boiler, carrying from 10 to 15 pounds of steam and it will run all night with very little variation, and on the coldest night have not used more than one and one half barrels of oil. Have about 5,000 feet of glass and am satisfied could heat twice the amount with same apparatus and very little addition of fuel.

The arrangement necessary to storing and burning the oil did not cost to exceed \$50, and now can burn coal or wood without making any change.

THOS. LEWIS.

Lakeside Park, Warsaw, Ind.

Regarding the query in last issue, one very decided objection to the use of crude oil for fuel is that the smell of the oil makes your establishment more or less of a public nuisance. It seems to be impossible to store the oil so as to hold the objectionable odor in check. It is wonderfully penetrating and when a quantity is collected together it sends forth on every breeze odors which at times are very offensive. I know one florist who uses the oil for fuel. His place is near the railroad station and he can always tell when the train is approaching that station by the smell of oil which is ever present. D.

ROSES.

Roses bought now for \$40 per 1000, or \$35 if our selection. Will net the purchaser over 100 per cent. by Spring.

100,000 in 50 Leading Sorts READY NOW.

Louisville, Ky.

THE NEW ROSE

WABAN

This very valuable rose originated at the Waban Conservatories of E. M. Wood & Co., Natick, Mass. It is a *SPORT* from Catherine Mermet and identical with that variety in every characteristic, excepting color, which is a rich, deep, **BRIGHT PINK**; it sustains the same relation to its parent as Duchess of Albany does to LaFrance. The only objection to C. Mermet is its frequently pale, insipid color in cloudy weather; experience has shown that the **WABAN** retains its deep rich color in all kinds of weather; it will, without doubt, prove to be as valuable as *THE BRIDE* which is also a sport from the same magnificent variety.

IT HAS ALREADY RECEIVED THE SILVER MEDAL

of the Massachusetts Horticultural Society; of the Pennsylvania Horticultural Society, and **Certificate of Merit** from each of the Societies in this country and Canada where it has been shown,

Ready for Distribution on April 15th, 1891.

Orders booked now, will be filled in strict rotation.

Extra good plants from 2½-inch pots.

1 Plant, \$ 1.00	250 Plants, \$100.00

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Monday to secure insertion in the issue for the following Thursday.

Address THE AMERICAN FLORIST CO., Chicago.

WE HAVE received a copy of the prize list and programme of the Pennsylvania Horticultural Society for the year 1891. There will be but two main exhibitions, the spring show March 17 to 20 and the chrysanthemum show November 10 to 13. There will be a minor exhibition in connection with each of the monthly meetings. The premiums named for the two main exhibitions are very liberal. The leader at the spring exhibition is a first premium of \$75 for collection of orchids, plants in bloom, a second prize of \$50 being also offered for the same. At the chrysanthemum show the premier prize is for collection of ten plants, ten varieties, for which prizes of \$100, \$75, and \$50, are offered, and orchid growers will again be attracted, prizes of \$50 and \$25 being offered for best collection of plants and cut flowers. Copies of the programme containing the full premium lists, rules, etc., can be had on application to D. L. L. Farson, secretary, Horticultural Hall, Broad St., Philadelphia, Pa.

FROM Mr. A. J. Frost, a florist of Toronto, Ont., we have received several branchlets of similar the leaves of which are much larger than usual. All exceed one and one-half inches in length, many are nearly two inches long and the width of the blade is in proportion. He states that its habit of growth is quite like that of the type but more robust. It is doubtful whether the large size of the leaves will make it especially desirable but if a more rapid grower it will certainly be useful if it will come true from seed and retain that characteristic.

A CURIOS break of the carnation is seen in a flower sent by Messrs McVittie & Browne, Barrie, Ont. It is a sport from Mrs. Carnegie and has the character of that variety except that across the center the petals have assumed the variegated markings of the Chester Bride type. It could be "fixed" in character it would probably be useful as catalogue novelty, but it is doubtful if it would be acceptable as a cut flower to commercial growers.

VERBENAS.

IN 15 CHOICEST VARIETIES, NICE HEALTHY and CLEAN stock. Per 100

IMPORTANT TO ALL FLORISTS.

Our new trade list of 50 pages and our descriptive catalogue of 100 pages is now being mailed to you. Should you not receive a copy within a few days, notify us and we will send you one.

Without any desire to brag we assure you we have the largest and best collection of Chrysanthemums in the country.

All stock is bloomed before propagated from. Our list contains over 600 varieties. We also publish a list of synonyms in our catalog.

Pamphlet of "Summer Flowering Bulbs" 20 pages mailed on application. Price \$3 per 100. Our name does not appear in the pamphlet, therefore it is highly valuable for those having a counter trade. Our list of dormant bulbs is the largest and finest of any in the country.

We have so much of interest to florists and others in our catalog that we cannot begin to mention any.

Blanche Perry Sweet Pea, proved of great value last year as a cut flower. We have a large stock of fresh seed at 10 cents per c2; \$1.00 per lb.

You will bear in mind we told you last year that Chrysanthemum V. H. Hallock was a good one. You will hear from this later on. We also recommended Charity and White Cap on our last years set as being particularly valuable for florists' use. Prices in quantity on application.

V. H. HALLOCK & SON, QUEENS, N. Y.

Our Seed Trade.

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president; JOHN FOTTLER, JR., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1891.

MR. A. D. COWAN has withdrawn from the seed firm of A. D. Cowan & Co.

CHAS. G. WEINER and Alex L. Don will continue the business of A. D. Cowan & Co. in the same name.

MR. GEO. S. HASKELL of Rockford is now able to be out though not yet recovered from his recent severe illness.

J. C. McMILLAN & Co., seedsmen, of Atlanta, Ga. have assigned; acts practically nothing. It is not encouraging for seedsmen to assign at this season of the year.

Some More Facts and Figures.

ED. AM. FLORIST:—Your renewed request for my views on advertising, together with what figures I have compiled as the result of my experience in that department of my business, reaches me at a busy time, so I have remained at my office to-night to try and give your wishes consideration. Motive is apt to color our views and expressions in all that we say and do, and my first thought has been to question myself as to the motive that induces me to give you for publication the facts I possess and I feel happy to say I find, first, an appreciation of the benefit the free advertising it gives, with a desire to oblige my friend, your president, and second, the wish that it may lead to more sincere consideration and hearty co-operation for the best interests of the seed trade. For the last seventeen years I have been engaged in the seed business in this city, ten of them connected with the old established house of Buist, and the last seven under my own name; during that period many thousands of dollars worth of advertising has been placed under my special direction; and the more experience I have the more I find there is to be learned.

We all know that persistent, judicious advertising of meritorious merchandise has made many magnificent and princely fortunes, but I do not want to repeat any trite well known facts, but simply give you a few figures and my deductions therefrom.

With the utmost care and detail I find it extremely difficult to accurately figure the value and results of advertising; it is like weighing the perfume of the beautiful flowers which make their presence known though our eyes be blind; many facts are plain while others are concealed, and in the data I give I wish it distinctly understood that I do not regard the figures as showing all the fruits of the expenditure but only those immediately, directly and actually traceable by careful compilation. In starting my business in 1884 I aimed to do no mail trade, confining myself entirely to the wholesale business and retailing only locally in Philadelphia; we, however, issued a catalogue which we supplied with our seeds to the dealer and soon found a small mail business coming in that we could not refuse nor tell to whom to give the credit of such orders. In 1886 we spent \$494.98 with N. W. Ayer & Son on a list of agricultural and religious papers, but have no records of results; the next year we expended in same way \$1,512.90 with the same parties, and it gives me pleasure

to say here that their methods and dealings were always such as inspired the fullest confidence, and I would not think of doing any extensive newspaper advertising without their aid. This year's business was also done on faith and no separate records kept. In 1888, however, I determined to know what actual results were, so I obtained a set of ledgers, one for each state and territory in the Union, and opened an account with each post-office from which any business came.

The results were as follows:

1888 CATALOGUE, COST 10c. MAILED.			
STATE.	Number Catalogues Mailed.	Cost Including Postage.	Cash rec'd from same.
Ala.....	1,200	120.00	36.00

Neb.....	800	80.00	27.00
N J.....	2,700	270.00	150.00

Totals... 29,100 \$2,910.00 \$2,190.15
Newspaper adver. \$907.51

\$3,817.51

To many I suppose this will look like a very small amount of business, and in comparison with the old established mail houses I know it is, but neighbor I am giving facts for general good and will only say sit your own expenses in this line and directly traceable receipts and see what are your real results. Personally I regard the advertising of any good reliable house having good reliable goods to sell and expecting to continue in business, as an investment that is almost as permanent as the continuance of the house itself, and that no one should engage in expenditure in that line beyond their ability to capitalize their business; I trust no one in the seed business ever spends money in advertising that can only be paid by a successful issue of the same, and must otherwise be taken to wrong side of profit and loss account by the newspapers or agents.

I felt that this showing of 1888 was a good beginning in the mail line, and having had a good year concluded to enlarge on it in 1889.

The results were as follows:

118,756 \$5,937.80 \$3,071.50
Newspaper adver. \$1,100.00

\$7,037.80

This I did not regard as satisfactory and decided in 1890 with increased wholesale business not to make any effort for the mail trade and did no advertising, mailing only 6,000 catalogues to actual mail customers of the year before at a cost of \$300, receiving orders for \$1,203.24; being the first time in 17 years I could ever trace a direct profit in that department.

We do not regard this advertising as money lost, for we know that much of our success in other departments was due to it, and even now in 1891 we are receiving orders from the 1888 edition of seed manual.

The mailing of catalogues free to all applicants from promiscuous newspaper advertising we believe to be very unprofitable; our system enabled us to trace this up and we give two samples.

Of 25 applications from Florida four ordered \$3.40 in all.

Of 28 applications from Alabama one ordered 10c in all.

Most of those who will be interested in this article will know this was not due to the catalogue being poor or unwisely forced. I enclose a postal before me at this time touching this point, and also showing the permanence of advertising.

"I have your catalogue of '88 before me. Am so well pleased with it on account partly of its instructions to young beginners concluded to get it before ordering my seeds. Sent at once and oblige,
WM. H. MILLER.

Mathews C. House, Va., Jan. 22, 1891."
I put more faith to-day in originality in advertising than any other feature, those who follow the old beaten track can not hope to strike and rivet attention, the field for imitators is a narrow one.

Z. DE FOREST ELY.
Philadelphia, Jan. 30, '91.

SHEBOYGAN, Wis.—Otto Schucht, florist, should be added to the directory list. Miss A. Schucht should be F. St. instead of F.

A. D. COWAN.

THE BEST OF ALL CAULIFLOWERS!
 Is the sort now sent out for the first time, the perfection. The snowball, glitced and Extra early Erfurt are all excellent sorts, but an extensive market gardener, who has raised these and all other sorts, believes that within three years the most enterprising market gardeners will have dropped these and be raising perfection. Trial package, 5c; per doz. \$1. Seed catalogue **FREE** to every one. **JAMES J. H. GREGORY & SON, Marblehead, Mass.**

THE NEW TOMATO!

From Canada ought to be extra early and as such it isent out. The reports of the experimental stations speak highly of it. and numbers testify to its earliness, productiveness, large size, roundness, rich color and freedom from rot. Per package, 15c; five for 60c. You will find it only in my Seed Catalogue, which will be sent **FREE** to anybody.
J. J. H. GREGORY & SON, Marblehead, Mass.

TRUE DANVERS ONION SEED.

My seed farms extend into Danvers, and I frequently buy of the best onion raisers there hundreds of bushels of their handpicked onions to plant to grow seed from, sometimes paying as high as five dollars a barrel. I offer such seed, all this year's growth and of my own raising, at \$3.00 pound with a discount on large quantities. Much of the onion seed sold is either too flat or too round for true Danvers. Choice Danvers cannot seed \$1.00 per pound. Seed Catalogue sent **FREE** to every one.
JAMES J. H. GREGORY & SON, Marblehead, Mass.

ONION SEED. WHITE SPANISH (sulphur yellow), STRAW-COLORED and STRASSBURGH.
 All of my own growth from selected bulb. Prices on application.

HENRY METTE, Seed Grower and Merchant, Established 1875, QUEBLINBURG, GERMANY.

CHRYSANTEMUMS.

Waterer's Novelties for 1891.

ELDORADO, MARY WATERER, KATE RAMBO, M. P. MILLS, MRS. H. A. PENNOCK (yellow violet rose), **MRS. JOHN WESTCOTT.**

Also a large stock of **MISS MINNIE WANAMAKER**, the best white in cultivation.

Price list on application to

H. WATERER,

109 South 7th Street, PHILADELPHIA, PA.

GOLDEN BEAUTY TO THE FRONT.
 It was never exhibited, but has stood the more practical test, for no early yellow Chrysanthemum gave better satisfaction to seller and buyer than the above. Such was our experience, and also of all who handled it. What they say:
 "We handled no early yellow that sold better or gave better satisfaction to the buyer."—James Cardigan, of Pennock, Ross, 1514 Chestnut street, Philadelphia.

"You can get nothing better than that."—Wm. Voght, Jr. and Co., Cooper Sts., Camden, N. J.
 It was decreed in these columns last year, and we strive to tell its own story. Suffice it to say that our claims for it have been amply sustained, and that it combines all the essentials of a first class market variety for potting and cutting. Ready in quantity March, April and May, 12 for \$1.00 for \$8. You can not afford to get left on this offer. Orders booked now will be in rotation as far as plants are ready, by express or free by mail.

THE NEW DOUBLE WHITE DAISY SNOWFLAKE.
 One of the best of the new for winter flowers. Will grow and bloom all winter in a cold frame and it will endure cold nights will need no better quarters. Gives splendid returns. It does not seed, and can only be increased by division. Flowers pure white, very double, and beautifully quilled. As large as a 50c. piece. Ready now, 12 for \$1.00 for \$8. Sample plant and bloom free by mail receipt of 10 cents.

See for special offers in another column.

J. C. GIBSON, Woodbury, N. J.

CHRYSANTEMUMS.

HOLLIS' SEEDLINGS OF 1890.

Nine distinct and choice varieties. Prospective prize winners of 1891 need them. Best quality and lowest price.

35 to 50 cents each; \$3.00 for the set. Send for descriptive list.

GEORGE HOLLIS, South Weymouth, Mass.

CHRYSANTEMUMS.

250 varieties, new and old, fine plants in 2½-in. pots. Send for descriptive price list.
FRANK B. SMITH, Box 1081, Danville, Ill.

Orange, N. J.

It is reported that the florist business of Richard Purdue of East Orange is about to be rented to his two sons George and Richard, Jr.

Mr. Robert McArthur, who has leased the place conducted by the late H. J. McGall, is doing a splendid trade. He retains the services of Mr. Peter Popkins who was foreman for Mr. McGall. All the stock grown is retailed.

Mr. Atkins of West Orange has given up growing roots for the New York market. Mr. T. H. Spaulding says he never had so many orders for young plants of chrysanthemums before at this season and predicts that there will be more grown this year than ever before.

Mr. Mau has his place literally packed with orchids. Every possible bit of space is full.

The florists of Orange are thinking of organizing a Florists' Club.

Mr. Gus Cordier still maintains his reputation of being the best violet grower in the Oranges. He has held first honors for the past seven years.

Out of a batch of 30,000 cuttings of the Lizzie McGowan carnation put in the bench by John McGowan, only three cuttings were lost. A pretty good strike!

C. M. J.

Zirngiebel's Improved Strains

OF

WHITE ASTERS, PERPETUAL WHITE STOCKS, GIANT MARKET and FANCY PANIES; NEW HYBRID CARNATIONS, a cross between the Perpetual and Marguerites, and greatly superior for florists' use, in separate colors, pure yellow, white, pink and red shades.

FRED GREIGHTON.

ROOTED CUTTINGS of this Superb Pink Carnation, \$1.00 per hundred; \$20.00 per thousand. From the original stock, which has not been forced or in any way made to produce an extra quantity of **CHEAP** Cuttings at the expense of the future well doing of the same.

To give all a chance to see what kind of flowers this stock produces, I will send a few florets, free of charge, to any in the trade who apply to me by letter.

GEORGE GREIGHTON, NEW HAMBURGH, N. Y.

Every Florist! Every Nurseryman! Every Seedsmen!

SHOULD HAVE OUR TRADE **DIRECTORY.**

Address **AMERICAN FLORIST CO., 54 La Salle St., CHICAGO.**

Syracuse, N. Y.

Messrs. P. R. Quinlan & Co. have added the past year the following houses: One 125x10, cool house; one 125x12, cool house; one 125x8, for violets; one 125x8, for propagating; two 125x20, for roses. They have also three houses 125x20 for roses, one being planted entirely with Papa Gontier. Perles, Brides, LaFrance, Mermets and Niphetos are the varieties mostly grown. There are thirteen houses 85x16, devoted to palms, stove plants, carnations, etc., making a very fine plant to carry on their extensive trade.

L. E. Marquisse with the past year one house 50x18, one 50x10, one 20x20, one 108x18 and propagating house 37x6. Also potting shed 37x14, with cellar underneath, and has put in a Furman steam boiler of large size. He will build this year one show house 52x12 and one rose house 163x14. His specialties are roses, violets and carnations.

A. Burt has built one carnation house 165x12 and remodeled one 175x12, and will build immediately two 165x12. His houses consist of the following: One 255x26, three 175x12, one 250x14, one 150x30, two 170x20, two 165x20, one 165x12, one 180x25. Smilax, roses and callas are the principal product, although a general assortment of flowers for his retail trade is grown. One house 175x12 is devoted entirely to callas which are planted out.

Henry Morris, the Elmwood Park florist, started last year and has a very nice compact place. His greenhouses are as follows: Three 80x10 and one 50x10, and he will build this spring one 90x20 and one 90x10.

Mrs. Hayden, daughter of the pioneer florist John Day, has added one rose house 100x18.

The system of heating is divided, Messrs. Quinlan and Marquisse using steam, and Messrs. Burt, Morris and Hayden hot water.

There are other florists whose places I have not been able to visit at this writing, but know they are progressing like the rest. H. Y.

THE CHEAPEST AND BEST OF ALL.

FIR-TREE OIL INSECTICIDE soluble.

FOR PLANTS.—To make a solution for washing or cleansing purposes.—Half-a-Pint of Fir-Tree Oil to ten gallons of water.

For Green and Black Fly, Thrip, American Blight, Woolly Aphis, etc.—Half-a-pint of the Fir-Tree Oil to two or four gallons of water, or two or three tablespoonsful to the pint.

For Red Spider and Caterpillar.—Half-a-pint of the Fir-Tree Oil to two gallons of water, or three tablespoonsful to the pint.

For Mealy Bug, Brown or White Scale.—Half-a-Pint of the Fir-Tree Oil to four or six quarts of water, four to eight tablespoonsful to the pint.

For Mildew and Blight on Fruit or Foliage.—Half-a-Pint of the Fir-Tree Oil to a gallon of water, or six tablespoonsful to the pint.

Used with warm water it is quicker in its action than when cold is used.

Soft or rain water is necessary, and Applied in Wood, Tin or Pot Vessels.—Galvanized Iron Vessels must not be used.

FOR ANIMALS.—For Skin Diseases and Killing Vermin mix one part of Fir-Tree Oil with three parts of warm water and wet the affected part each day. In some cases it may be used stronger. For Ring-worm apply full strength with a brush each day.

FOR BIRDS INFECTED WITH PARASITES.—Put a tablespoonful of Fir-Tree Oil in one quart of warm water and dip the bird in it, taking care that its eyes are protected, hold the bird in one hand for one minute, then dip into clean tepid water; this may be repeated. If necessary a weak solution may be used with a spray producer.

Sold in Bottles and Tins.
Manufacturer—E. GRIFFITHS HUGHES,
MANCHESTER, ENGLAND.

LITTLE'S ANTIPEST

Valuable Discovery of the 19th Century.

SILVER MEDAL AWARDED

—BY THE—

CALIFORNIA STATE FAIR OF 1890.

This preparation is a sure destroyer of the **Scale, Woolly Aphis and Insect Pests** of any and all descriptions. It may be as freely used in the conservatory, garden and greenhouse as in the orchard or vineyard. It is non-poisonous and harmless to vegetation when diluted and used according to directions. It mixes instantly with cold water in any proportion. It is **Safe, Sure and Cheap.** No fruit grower or florist should be without it. Send for circulars and price list.

Cleveland.

A. Schmidt has given up his floral store on Euclid avenue.

It is reported that W. J. Leitch, formerly of Gooding & Leitch, has taken into himself a partner, a Miss Martin and himself having formed a co-partnership for life. Congratulations are in order.

Gasser is showing some fine lilacs and carnations and bulbous stock just now.

Harry Jaynes is growing only for the wholesale trade and exhibits some pretty good tulips and hyacinths, also Lily of the valley, the latter carrying from ten to fifteen good sized bells. He appreciates Tidal Wave carnation and thinks it profitable.

Mrs. E. G. Campbell has been doing some of the largest decorations for the leading social events. In some respects her work is original as she supplements plant decorations with handsome silk draperies, using handsome wood pedestals as well as the iron ones recommended by Mr. Harris. A specimen arca or latania placed on such a pedestal with a handsome yellow silk drapery thrown over the pot and draped prettily, with perhaps long stemmed yellow tulips filled in as though growing, and of the same shade as the silk, makes a rich and handsome decoration. Vary the color of silk and flowers and you can suit the character of any room.

Laurel wreathing has lately grown very popular for large ball room decorations.

Glazing.

Mr. Wm. Falconer's notes from Canada in a recent issue were very interesting reading. I am always interested when somebody has something to say in regard to butting the glass on greenhouses instead of lapping it. I have used the method for years and am convinced that the joints do not leak if butted closely.

My method of glazing tallies with that of Mr. Dunlop, only that instead of no putty I used thick paint into which dry sand was strewn. But I found it very hard work to get in a new pane of glass in place of a broken one. To lay them on loose is objectionable as the glass is not of even thickness, and while the battens will hold the thicker glass very tight the thinner one is likely to rattle in the wind. To overcome the difficulty I now use the following method: The glass is laid in exactly the manner as described by Mr. F. After the battens are screwed down I take sheet wadding and tear it into narrow strips, this is then, with a thin bladed table knife, stuffed in between glass and battens, and can be made so tight that not even tobacco smoke will go through.

ENCOURAGING reports reach us from houses in the catalogue mail trade both in seeds and plants.

A BUFFALO SUBSCRIBER can undoubtedly secure a supply of *Ficus elastica* cuttings through the medium of a want adv. in our columns.

A TRUSS of flowers of a seedling geranium raised by Mr. P. Hagerty, Wilmington, Del., has been sent us by that gentleman. The flowers are single, of good size, light pink flushed with a darker shade of the same color. The leaves which accompanied the truss of bloom are small with very distinct zone. Mr. H. writes that the plant is of good habit, dwarf and free. We do not know of a geranium having flowers of exactly the same coloring, but the value of geranium depends so entirely upon its qualities when planted out that it would be folly to express an opinion as to its usefulness. That will have to be determined by actual trial as a bedder or as a market plant.

Notes on the Queen of Autumn.

BY JOHN THORPE.

[Read before the Mass. Hort. Society Feb. 7.]

If it had been predicted ten years ago that the chrysanthemum should hold the position it does now, it would have been said such a thing is not possible.

Let us for a moment look about for the cause of the chrysanthemum's popularity. It did not come in a night, a week, or a year, but it has taken twenty years to bring about what we are enjoying to-day.

When Robert Fortune sent to England his first consignment from Japan, 'twas then the first spark was kindled. An intelligent minority was far seeing and wise enough not to be disheartened or put down by the many who were wedded to the paucity of form and color possessed by the puritanical varieties of that day. Furthermore, that minority was not confined in one house, one city or one continent. Many members of your society, the greatest horticultural society in the world, happily belonged to Fortune's minority, one of the most prominent being your ex-president, Dr. H. P. Walcott. It was the work of time, love and the expenditure of much money to spread before the people the feast they now annually enjoy, but everything comes to him who waits.

It is but a few years since chrysanthemum shows were unknown, except perhaps in your city, New York and Philadelphia. The numerous exhibitions, amounting to nearly 50, held last season are proof of the progress the chrysanthemum is making.

A FEW POINTS ON CULTIVATION.

I do not intend to give you the routine of general cultivation, as I am sure many of you know how to grow chrysanthemums better than I do. But there are a few points to which I desire to call your attention. One is don't ever neglect a chrysanthemum. This ought to be written very plainly on each plant.

No plant can be so successfully cultivated in as many forms. It matters not whether the plants are grown as massive specimens, tall standards, or on benches a few inches apart; if they receive the proper attention the result is always commensurate. The thousands of plants that are now required to produce fine flowers for sale have brought about a

system differing entirely from that followed previously.

The plants are grown continuously under glass, and are treated as follows: Good strong cuttings are rooted in May. The plants potted into thumbs, from thumbs into 3-inch, and from 3-inch to 5-inch. Then in June or the early part of July they are planted on benches, 16 to 24 inches apart, according to size, the soil being from four to six inches deep, using soil as for roses. They are pinched back so as to give from four to six shoots, carefully trained and well supported; syringed often and watered carefully. Air is given at all times, providing no draught is created.

The buds are selected at the end of August or the beginning of September, one bud to each shoot. The rest of the buds are rubbed off and all superfluous wood removed. As the plants grow they are tied, and as soon as the buds are well in sight commences the feeding with liquid manure.

It is necessary to state that such plants require at least five feet of head room, otherwise they have to be bent down. Some cultivators do away with benches altogether and plant on the ground. Others do not plant until August plants are smaller. Then they are placed closer together, often not more than six inches apart.

During the flowering season air is kept on at all times, and fire heat enough to keep the temperature at 50° at night.

THE CLASSIFICATION OF VARIETIES.

The grouping and classification of varieties is now in a somewhat ambiguous and unsatisfactory state, and worthy of serious attention. Exactly how to bring about what is required is a difficult question, owing to the continual addition of new forms and the merging of one section into another, thus often obliterating the lines of demarcation.

Perhaps, as a temporary relief, the best thing to do is to accept the classification, as far as it goes, of the National Chrysanthemum Society of England, which is as follows:

Section 1. Incurved, of which the George Glenn and the Queen of England are the types.

Sec. 2. Japanese. This is divided into four groups. Group 1, Peter the Great, flat petals; group 2, Bronze Dragon, petals quilled; group 3, Cossack, petals fluted.

Sec. 3. Japanese incurved. Type, Comte de Germiny.

Sec. 4. Japanese reflexed. Type, Elaine.

Sec. 5. Reflexed. King of Crimson.

Sec. 6. Large anemones. Type, George Sand.

Sec. 7. Japanese anemones. Type, Fabiana de Medina.

Sec. 8. Pompons. Type, Bob.

Sec. 9. Pompon anemones. Type, Antonius.

Sec. 10. Single flowers.

But this does not cover all the ground. Mrs. Hardy and her type have no place. Neither have Violet Rose and Ada Spaulding.

SEEDLINGS.

The raising and distribution of seedlings has assumed proportions beyond conception, from which we may expect startling results. Of American raised seedlings, to be distributed this spring, the number is over 120. Taking into account the number distributed last year, and out of that there are at least 14 that rank among the very finest, we may expect that at least twenty-four of this year's introduction will be among the best at next flowering time.

It is hoped that due care will be exercised in the awarding of medals and in the granting of certificates, now that there are so many to select from. A rule should also be made absolute that neither a medal nor a certificate shall be given to any seedling unless it is named, and this name is not to be changed. The fact of giving medals and certificates to seedlings bearing numbers only is calculated to be misleading and confusing.

I do not wish it to be understood that I object to the exhibition of seedlings under number when they are placed on exhibition only, but as soon as they enter into any competition let them be properly named.

It is also hoped that in making awards to seedlings neither anemones, pompons, nor any other type will be overlooked or discarded as it is in the varied forms that so much interest lies.

EARLY FLOWERING KINDS.

It has been asked whether very early kinds are desirable. My reply is that, with one or two exceptions, the very early varieties we now have are not of great merit. They lack either vigor, distinctness or brilliancy, all of which they should possess as decorative plants.

But suppose we have presented to us a group having robust, compact growth, bright and decidedly healthy foliage, flowers of the type of and as large as President Hyde, and in desirable colors, flowering from the 15th of September, what could be more desirable? We are promised such a group, and they will be heartily welcome.

COLOR DEVELOPMENT.

That constant additions are being made to the already numerous shades and tones is known to close observers. The pink shades are becoming each year clearer; the red and crimson are getting brighter. The once undefined shades of purple are decidedly more brilliant and effective. As to yellows and whites, we are yearly presented with something different from what we already had.

Coming now to the possibilities of a blue chrysanthemum, let me say that I am convinced we shall have shades of blue as positive as we now have blue shades in pansies. It is within the memory of a great many of us when there were neither red nor blue shades as presented in the pansies of to-day.

NEW TYPES.

Just as long as there are produced new types and new shades of color, just so long will the interest in the cultivation of the chrysanthemum be kept up. We have but to remember the interest that that beautiful variety Mrs. Hardy and her followers created.

Now we are evolving a type which is certain to create further interest. Its distinct characteristics are the marked extension of the ray florets beyond the

body outline of the flower. Examples are Violet Rose, Ada Spaulding and Flora McDonald. The ligulate petals are broad, numerous and incurving. It may be that a good name for this type would be American.

Yet another type, the original of which is Laciniatum, one of Fortune's importations from Japan, is being developed in all colors and in the largest sizes there are.

Still another form, distinct in every particular, is the one where the flowers present two distinct surfaces. The upper surface is composed of broad reflexed petals, the lower surface being a mass of narrow segments which extend from either side of the base of each floret.

These are only a few of the newer forms waiting to be brought forth.

POSITIVE CROSS-FERTILIZATION.

Grave doubts have been expressed whether actual cross-fertilization has ever been accomplished artificially in chrysanthemums. To this I can positively say that it has, without the shadow of a doubt, but I do not say that every variety can be so crossed. All flowers intended to be fertilized must have their petals clipped off close to the stigmas before the flower opens. This admits of the development of not only the stigmas but of the ovary also.

Some varieties will be found entirely sterile. Grandiflorum has never yet given me a single seed, and, as far as I am able to tell, the pollen grains are sterile also. Where cross-fertilization is carefully and successfully done, fewer seedlings give the best results.

POSSIBILITIES BY SELECTION.

The possibilities to be obtained by selection is just as applicable to the chrysanthemum as it is to any other class of plants or animals. In fact, wherever seedlings are raised it is by selection that we obtain variety, whether they be large flowers or small, tall plants or dwarf. It is by selection that, after a few generations, each raiser creates a standard of his own, and by which his productions are known. It is simply this: You have different material and different ideas from me, consequently the result must be different.

DOLLARS AND CENTS.

From a strictly commercial point of view, the chrysanthemum has become of national importance. The annual sale of plants is now over a million. The numbers of cut flowers that were sold in open market last year is almost incredible, many of the best flowers realizing \$50 per 100 at wholesale. Some of the large growers around New York had as many as 30,000 flowers in sight at one time, averaging a great deal better in quality than many of the winning flowers that were to be seen on the exhibition tables a few years since.

It has been stated that the chrysanthemum flowers interfere with the sale of roses and carnations, but I notice that nothing interferes with chrysanthemums in their season.

Growing Exhibition Blooms.

BY J. M. DUNLOP, WAUWATOSA, WIS.

[Read before the Wisconsin Florists' and Gardeners' Club at the Wisconsin Horticultural Convention.]

To grow chrysanthemums well we must start off well; that is, we must have strong, healthy cuttings. I plant out my stock plants on benches in good soil. I have two reasons for this. The first is, I can procure a better cutting from them than I could get from a plant in a pot which has been highly fed. The second is

I can get any quantity to choose from, those coming up from the root and about as thick as a lead pencil being preferable. There is some diversity of opinion as to the best time to propagate: some growers believe that winter, others that spring, cuttings are best. But after November I always put in a good one when I see it. Plant them with sandy soil in thumb pots, and place them in a temperature of about 50°, not necessarily in a shaded position, paper laid over them about noon for the first two or three days will be all they will need. With a little attention they will root in about three weeks, and from this time on they must never suffer for want of attention, in fact it is courting certain failure to neglect the chrysanthemum in the early stage of its growth. I have always found the best results by keeping them growing on slowly, being careful not to let them get dry or root-bound. If they do you will have plants with hard, bare stems, with perhaps a couple of leaves on the top, after which you might as well consign them to the rubbish heap, as labor on them is so much labor thrown away.

Plants struck in winter will be ready for repotting by the end of February; give them a shift into 3½-inch pots and place in a position near the glass so as to keep them dwarf and strong. The only attention they will require will be to keep them watered and clean of green fly, being careful not to get the plants too crowded together. They will be ready to move into 5-inch pots by the first week in April; then give them a place in a cold frame, keeping them rather close for a few days until they take to the soil, after which, the weather being favorable, give them abundance of air, dispensing with the sashes entirely when frost has gone. If all goes well we will now have a strong growing plant, about one foot or so high, according to variety. The rest of the plant being clothed with thick leathery foliage down to the rim of the pot, this being very important, as it will enable it to stand more feeding when it is developing the flower, thereby giving better results. But unfortunately some varieties, such as Meg Merriles, will throw their foliage no matter how well you guard against it.

About the middle of June the plants will have completed their first growth and will make what is known as their June break. Now they will require to be gone over and disbudded, taking out all the buds but the three next to the top, and give the plants a stake to keep the wind from injuring them. About this time they will be ready for shifting into their blooming pots, giving them 7 or 8-inch, according to variety. Chrysanthemums being water loving plants, the pots must be thoroughly well drained, so as to prevent the soil from getting sour, and plant them in good turf, adding some burned ashes or some other material to keep the soil sweet and porous. I have always used this simple compost, my experience being that it is better than a little of this, that and the next thing. The idea is to put something in the pot that will retain the food the plants will afterward receive in a liquid state.

After potting place them in a sunny position, not necessarily in a place where they get the full blaze of the noon-day sun, but the three next to that, being preferable as it will enable you to avoid getting the plants ripe too early. I take a lot of common boards, lay them on the ground about four feet apart, running them north and south, and place the pots on them. This in a great measure prevents the worms from getting in and

destroying the drainage. Water carefully for the first week or two till the roots begin to work freely in the soil, after which they will require an abundance of water. The plant will now require three tall stakes each to train the three separate shoots to, or erect some light trellis work which will answer the same purpose and I will prevent the wind from tipping over the pots.

By the first or second week in August they will form their crown buds; now comes a very important part in chrysanthemum growing, more especially if they are grown for the show table. Some of the earlier varieties will require to be allowed to go and take the terminal, but varieties such as the Comte de Germiny, Mrs. F. Thompson, etc., ought to be grown from this bud. They will require unremitting attention, going over them daily and removing all superfluous growth, breaking out with the point of the finger all the small buds appearing around the flower. I generally leave one wood bud till I see if the latter is perfect; if not I should let it run to the terminal bud, which will form in two or three weeks. The plant will require to be gone over every week or so, removing all lateral growth and suckers from their roots so as to send all the food to the flower.

As soon as frost makes its appearance in the fall the plants must be all housed or otherwise protected, as a few degrees of frost will entirely spoil your summer work. Place them in a light, airy house, giving

sufficient air day and night. A little fire heat at night will prevent damp from settling on the petals, and will also be a good preventive of mildew, and by the first or second week of November you will be able to measure your blooms according to the measure of skillful planters you have given the plants.

Perhaps the most important point in chrysanthemum growing is the handling of the watering pot. Although they are water-loving plants they should never get it except when they require it, and never manure water when the soil is dry. I generally water with pure water first, then go over them afterward with manure water, thereby preventing the young feeding roots from being destroyed. After the flower buds begin to grow I commence feeding the plant, giving a little at first and gradually giving it stronger until the flowers show their petals, after which gradually give less, and when the flowers are expanded give pure water.

In regard to what liquid manure to use, I think cow manure is the safest to work with, changing off to bone dust, guano water, or in fact anything that will nourish a gross feeding plant.

To make sure of having sufficient flowers to choose from in November, we must grow four plants of the varieties we want to show; even then lots of them will be a disappointment to the grower, as the several varieties will not always do equally well year after year. Thus, if growing to show twenty-five distinct varieties it would be well to grow thirty

varieties, which would make in all about 120 plants, and would give 360 flowers. No doubt you will say that will not pay for commercial work, but I am satisfied that it will pay better even for that work than growing poor specimens in the bush form. More especially if you can realize three, four or five dollars per dozen for the flowers of the former.

Another way to get large flowers is to cut the plants over about five inches from the pots about the first of June, train up three shoots, take the first bud that appears and give the same after treatment. Still another is to take the tops of the plants you intend for bush specimens in May, root them and grow them in 4 or 5-inch pots. These, with liberal treatment, will give large, fine flowers and you will have a plant that you can stand and look down on. These grown on the extension system, I am afraid some of our smaller brethren will require a step-ladder to get up to see how the flowers are getting along.

It will not be necessary to give a list of the varieties to grow, as every one of the named varieties have some good point to recommend them. Then there have been so many new ones making their appearance of late years that one almost gets lost among them. But I think it is good policy not to invest too much in new and rare varieties; rather grow something that you have proved to be good.

The Missouri Botanical Garden.

In this issue we present a number of views in the Missouri Botanical Garden, and a portrait of the late Henry Shaw, to whose munificence we are indebted for this garden which has in the past done and will in the future do so much for horticulture. The engravings are selected from among those which appeared in the book recently issued by the Trustees of the garden, a notice of which appeared in a late issue of the *FLORIST*. We are indebted to Prof. Wm. Trelease, Director of the Garden, for the use of the plates, and the facts which follow are gleaned from the book before mentioned.

Henry Shaw was born in Sheffield, England, July 24, 1800. His father was a manufacturer of hardware. In 1818 he came with his father to Canada, who soon after sent him to New Orleans to learn the mysteries of cotton raising. His stay in Louisiana was, however, short, and he soon started out on his own account with a small stock of cutlery for the then small and remote French trading post called St. Louis, where he arrived May 3, 1819. His business prospered amazingly as the post grew into a city and at the age of only 40 years he was enabled to retire from business with a fortune of \$250,000 (equivalent to \$1,000,000 in our day). He then traveled for several years and the beauties of the great gardens in England suggested the idea of building up something equal or better in America and in 1837 plans for the present garden began to take shape. From that time on it was the work of his life to which he devoted both his time and money.

He died August 25, 1889, and his will gave the Botanical Garden splendidly endowed, and the Henry Shaw School of Botany to named Trustees for the benefit of the public. There could certainly be no grander or more enduring monument to his memory. Among other bequests was one of \$1,000 annually for a banquet to the Trustees of the Garden and the students and patrons of the natural sciences they may invite, and \$400 an-

usually for a banquet to the gardeners of the institution and invited florists, nurserymen and market gardeners of St. Louis and vicinity. Also \$500 annually for prizes at a flower show or exhibition, and \$200 for an annual sermon "On the wisdom and goodness of God as shown in the growth of flowers, fruits and other products of the vegetable kingdom."

This splendidly equipped and endowed garden is under the direction of Prof. Wm. Trelease, and that many of the problems that have vexed practical horticulturists will be here elucidated for the general good there can be no doubt. In this way the garden will exert a national influence.

Among the features of special interest to gardeners is a provision for the free education of a number of young men in the science of horticulture. Not to make them scientists but to enhance their skill as practical gardeners. The details of this plan as arranged by Mr. Shaw were given briefly in a former issue of the *FLORIST*, and since then a son of one of our readers made application, passed the examination and has begun his course of study as a "Garden Pupil." Among the illustrations in this issue appears one giving a view of the building where these garden pupils are lodged. The entrance into the ranks of the craft of a goodly number of men trained in the scientific as well as practical details of plant growing can not be other than vastly beneficial and materially advance horticulture in America.

The Springfield, Mass., Amateur Horticultural Society.

I was in Springfield a few days ago, and in the evening attended a meeting of the Amateur Horticultural Society. The town has a population of about 40,000, and is familiarly known as "The City of Homes." It is a very beautiful place, built on rolling land, and has wide streets shaded with elms and other trees; and here are situated the United States Armories, where the famous Springfield rifles we use to kill the Indians with are made.

This society was inaugurated about two years ago, and its growth has been wonderful. It now numbers 552 members, ladies and gentlemen, and two honorary members. They come from every walk in life, artisan, commercial and professional; every one interested in the garden or in flowers is invited to join the society. And the members are active, interested and appreciative. They hold meetings twice a month, and these are well patronized by both ladies and gentlemen brim full of good will toward one another and interest in floriculture and inquisitiveness about ornamental plants and flowers. It is a happy family, and a stranger is at home among them.

To relieve the weariness of business matters and intensity of discussion piano and vocal music are rendered by some of the lady members, and downright enjoyment is printed on every countenance. Formality, creed, politics and social grade are leveled before the throne of Flora; everybody knows everybody and is happy to see everybody, and the plants and flowers they have come to discuss are a ready theme for everybody. This is no "School for Scandal"; their neighbors' weaknesses have no concern for them. They want to know why early-sown China asters are more apt to come semidouble than late-sown ones; what you think about roses on their own roots and budded; how about their pansies that

are under the ice; if any thing short of elbow-grease or warm water (120°) will free their house plants from red spider; why there isn't a blooming plant of *Ostrya magnifica* in the country; why *Delphinium* *Lillisi* so hard to get up from seed; if a Colorado blue spruce and a Japanese umbrella pine would be two nice evergreen trees for a town garden; why the Chinese double-flowered bird-weed is like one's poor relations, and many other things. These questions are asked by the several ones interested in them and answered by those who can, or referred by the president.

All the members, however, are not equally prompt upon their feet or ready to speak out in meeting and make known their wants, but even they have no excuse, for all are supplied with question cards on which they are asked to write any question about flowers or plants or gardening that may interest them. These cards are then collected by the secretary and the questions given to the meeting by the president.

QUESTION CARD.

SPRINGFIELD AMATEUR HORTICULTURAL SOCIETY.
C. L. BURR, Pres. G. H. LAPHAM Sec'y.

It impressed me as a splendid arrangement.

And what a happy meeting it was altogether! Husband and wife, and parents and children, all were here and all interested in flowers and how to grow them, which is the purest, most refining and delightful recreation in which one can engage.

The influence of this society is, I am informed, already very potent in the gardening of Springfield. And one gentleman, 62 years old, and who never before had a garden, told me he, too, was going to have a garden this year.

But in what way does this, an amateur society, interest the florist? Every one of these amateurs is interested in his garden and must have plants to set out in it and seeds to sow in it. Then from whom shall he get them? W. F.

Fern Notes.

Adiantum cucumatum and its various forms continue to occupy the most important place among trade ferns, as the thousands of cut fronds as well as the many thousands of plants in pots that are annually distributed in each of the large cities abundantly testify.

Among these forms one of the commonest and a very good one is *A. cucumatum* *Roebeckii*, this having longer fronds than the type, and the pinnae being usually smaller and finely serrated on the edges. The size of the pinnales is, however, a somewhat deceptive characteristic to judge by, while the serrations of the edges remain a more fixed feature.

This variety has been in the trade for a number of years and is now well known and esteemed, especially for cut fronds, its comparatively long stems being rather an advantage for this purpose.

Decidedly one of the finest forms is *A. cucumatum* *grandiceps*, the long drooping heavily crested fronds of which are highly ornamental. This variety was also of garden origin, and is very freely reproduced from spores.

A. c. grandiceps, I think, fully as hardy as the type and consequently is a valuable addition to the available stock

for fern pans and similar work, besides being an admirable exhibition sort when nicely grown.

Another very pretty variety and quite dwarf in habit is *A. c. mundulum* which throws up a compact growth of nearly erect fronds, the latter being more or less triangular in outline and dark green in color. *A. c. mundulum* is a charming little plant for small work, but is not specially desirable for cutting on account of the fronds being too short.

Still another fine form is *A. gracillimum* this also being a garden variety of *A. cucumatum*, and one that has earned for itself wide recognition during the fifteen years or thereabouts that it has been on the market.

The fronds of *A. gracillimum* are of somewhat irregular outline, very finely divided and much branched, and are invaluable for certain cut flower arrangements, their delicate dark green pinnales lending an additional charm to the latter.

This is also freely reproduced from spores and is of rapid growth, though from the delicacy of its fronds is more likely to damage during the winter if carelessly watered than are some of the more robust varieties.

The damping off of any of these varieties can usually be prevented, however, by watering early in the day and ventilating freely whenever the weather will permit, at least this will prevent it unless the plants are very badly crowded.

Rather an odd looking form is *A. cucumatum* *deflexum*, which is also of garden origin and is said to be a hybrid between *A. Bausei* and *A. cucumatum*. The fronds of this variety are triangular in outline and of medium size, and as its name indicates the pinnales are deflexed or bent downward, this peculiarity giving a strange effect to the plant, and not altogether a happy one, as it is apt to create the impression that the plant is suffering from lack of water.

A. c. deflexum is of compact habit and makes a shapely little plant, but does not seem to have been received with enthusiasm by the trade, and consequently is seldom seen in quantity, though introduced about ten years ago.

A. c. Lawsonianum is also a pretty form and has graceful fronds that are scantily clothed with small pinnae, the latter being cuneate in form, though quite narrow. It is a moderate grower and the fronds stand very well when cut, but still it is doubtful if this variety is essential to the average florist, though of value to one who does considerable amateur trade.

In addition to the forms of *A. cucumatum* to which reference has been made there are several others that have been named and sent out, though probably in very limited quantities, and among them are *A. c. Bournei*, *A. c. dissectum* and *A. c. strictum*, the latter having erect fronds on which the pinnales are arranged more or less spirally. Perhaps it is of questionable utility, however, to name and perpetuate many of the odd forms that are so frequently found among seedling ferns, for many of them are no improvement on the type, and the christening of such with a high sounding descriptive title only leads to more tangles in nomenclature.

Pteris nobilis: Among the comparatively recent introductions this appears to be a fern of much promise for trade use. It belongs to the cretica class and is possibly a seedling from *P. cretica* *magnifica*, but whatever its origin is, it seems an acquisition, being compact in habit, though a vigorous grower and

A PORTION OF THE PATERRE. MISSOURI BOTANICAL GARDEN

THE LOTUS POND. MISSOURI BOTANICAL GARDEN.

having semi-erect fronds of bright green color, all the tips being well crested.

All the forms of *Pteris cretica* possess much endurance, the foliage being firm and tough, and this newcomer will doubtless adhere to the family trait in this respect, and consequently will find a ready opening as soon as sufficient stock shall have been secured.

W. H. TAPLIN.

Souvenir de Wootton.

When one has a friend who has used him well or has stood between him and some awkward dilemma in which he has been placed, one naturally, and I think very properly, feels like standing up in defense of such friend, should his good character be called into question. Just in this way do I feel with respect to a rose whose character has in my estimation been very unjustly disparaged, namely, Souvenir de Wootton.

In want as we are of a good red rose, Papa Gontier does well and is good in its place, American Beauty is not productive enough to pay at the prices which we can command. Here was the dilemma when Wootton steps in and fills the bill pretty well. I say pretty well, because although Wootton is a good rose I think it is the same with it as with all other matters horticultural, there is room for improvement.

I have 300 plants of Wootton, 150 were planted on bench July 1, and were very good plants, the other 150 were planted August 15, and were very poor. In fact these last do not average more than one foot high at present writing and have not produced more than one quarter of the blooms cut up to present time. I give below the number cut from the 300 from December 1, 1890 until January 15, 1891, although I do not think it by any means a large yield for that number of plants. The flowers were of good size and color and sold as freely or more so than other good roses in Toronto.

I have very few points to offer in the way of culture. I propagate nothing but good healthy well ripened wood, a strong

point, as I think a good healthy plant is half the battle. Treat same as tea roses, do not use any top dressing of any kind. Grow in temperature not higher than 56° with plenty of ventilation on all possible occasions. Watering: Mr. John May says in a recent issue of the AMERICAN FLORIST: "Every day's experience convinces me that we have all very much to learn in this direction." I am with Mr. May on this point. With me Wootton uses more water than any other rose I grow, but at the same time I think the soil in which it is growing should be allowed to dry out pretty well between each watering.

Carnation Lamborn.

Doubtless the several criticisms which have recently appeared in the FLORIST upon my article of January 8 have been very interesting reading, and the same have probably brought out some valuable data which might otherwise have been withheld, but has it occurred to the general reader that the most conspicuous of my critics are grossly in error? Now I greatly dislike the task of dashing the cup of bliss from the lips of these exultant heroes just at the time they are regaling themselves with such a generous swig, but it does seem to me that now is about the time that I should become the critic. I will therefore at once proceed to lay this matter out in a plain business like manner, and while these gentlemen have permitted themselves to be caught in their own traps I will endeavor to convince them that I can afford to be magnanimous.

Mr. Lombard at the commencement of his criticisms on page 378, issue of the FLORIST for January 22, says that fair and just criticism helps us to greater efforts; very well Mr. Lombard let that be our text: Mr. Lombard then goes on to

explain that in two months and eighteen days he gathered 6,376 carnation flowers, which at wholesale barely averaged 2½ cents each, and which netted him 22½ cents per plant for 700 plants. Now permit me to say to Mr. Lombard to begin with that he appears to be in error; according to his own figures his net is only imaginary, for the reason that he has made no deduction for cost of production; I always deduct 50 per cent for this purpose and if Mr. Lombard does the same he will find his flowers bring him, and his 700 plants net, he receives something less than half the amount he names. But as Mr. Lombard fails to make any deduction for expenses and also fails to give us the space occupied by his 700 plants, and leaves his statement incomplete in other ways, I will leave him to revise it at his leisure.

But Mr. Wm. Nicholson of Framingham, Mass., offers us the basis of something tangible to work upon. This gentleman on page 398 of the FLORIST for January 29, with a heart bubbling over with gratitude and exultation, tells us of the great interest with which he read my letter of January 8 and kindly congratulates me, etc., etc. He then proceeds to say that from a new house 100x20 feet which he has devoted to carnations this winter; and in which he had planted 1,700 carnation plants, from 1,500 of which plants he thinks he gathered in October, November and December 25,000 carnation flowers, and that he expected to gather a good many more in January. Now my dear Mr. Nicholson let us call it 35,000 perfect carnation flowers and for convenience sake bring the account down to February 1. You do not mention the price you obtained for the flowers, but as Mr. Lombard says he obtained about 2½ cents we will presume that you received about the same price for yours, which would amount to \$875 for the 35,000; but as Mr. Nicholson has also neglected to make a deduction for expenses I will do it for him and deduct the usual 50 per cent for cost of production and all expenses; this will leave Mr. Nicholson \$437.50 as the net result of his 35,000 carnations, and according to his estimate the gross proceeds for four months of a new greenhouse 100x20 feet, or a greenhouse surface of 2,000 square feet. This, I believe, is Mr. Nicholson's case in a nut shell, according to his own statement as I understand, and I presume other readers of the FLORIST understand it.

Now, gentlemen, we have come to the point where I can present you with my own statement, a statement which can be verified by any of the gentlemen who have visited me during the last four months; it can be verified by my books or sworn to if necessary, and if it causes a wide expansion of your optics I cannot help it. You will now permit me to refer you to my letter of January 8, which you all seem so jubilant over. You will find that I distinctly state in that letter that the two side benches of my new frame greenhouse and part of another side bench are occupied with carnation Lamborn, there being altogether a little more than 3,500 plants. My new greenhouse is 120x18 feet, and the actual space occupied by these 3,500 Lamborns is exactly 801 feet, 199 feet less than half of the space inside of Mr. Nicholson's new house. Now, as stated before, and that has afforded my friends so much joy, in these 3,500 Lamborns in October, November and December furnished me with 10,000 good pure white flowers, and in January they gave me just 6,000 more

THE MAIN TURF WALK MISSOURI BOTANICAL GARDEN

THE MUSEUM GATE MISSOURI BOTANICAL GARDEN.

flowers, making altogether down to February 1st 16,000 in four months.

I have brought the account down to February 1 to use in comparison with Mr. Nicholson's account. These 16,000 Lamborn flowers have, taking into consideration the different requirements of my business and after a deduction of 50 per cent for cost of production, netted me \$50 per 1000, or for the 16,000

Net.
\$800.00

These 3,500 plants of Lamborn have also up to February 1 given me something over 40,000 cuttings, the bulk of which are either already sold or engaged.

The advertised price of these are \$2 per 100 or \$15 per 1000. Half the number at \$15 per 1000 will be \$300, less 50 per cent;

\$150.00

half the number at \$2 per 100 \$400, less 50 per cent;

\$200.00

On the northern end of the center bed of this new house are planted between 1,100 and 1,200 plants of Lizzie McGowan carnations; these gave me during last November a number (only about half of them being allowed to flower) something over 6,000 flowers, 1,000 of which were used in my store in one day for funeral work, 500 were gathered the day before the photo was taken which appeared on page 323 of the *FLO-RIST* issued Jan. 1, the balance were gathered throughout the two months and netted me \$50

per 1000, or

\$300.00

These Lizzie McGowan plants up to Feb. 1 have given me a little over 20,000 cuttings, all of which are rooted, sold and ready to ship when the time comes, which is Feb. 10. The advertised and sale price of Lizzie McGowan is \$12 per 100, \$100 per 1000. About half have been sold at the 100 and the other half at the 1000 price, or at an aggregate of \$3,300, less 50 per cent for cost of production

\$1,650.00

Quite a number of extra strong plants of this carnation have been sold at \$3 per dozen, but I will make no special account of them.

But at the south end of the center bed of this house are planted about 500 plants of Silver Spray carnation. These gave me during the same time 2,000 flowers which were also good and brought the same price net as other white carnations, or

\$100.00

these also gave me 5,000 cuttings, which at \$15 per 1000, less 50 per cent for cost of production

\$37.50

The new house referred to, as stated is 100x18, and during the four months up to Feb. 1, 1891, has netted me clear of all expenses,

\$3,237.50

Mr. Nicholson's statement for the same time for a new greenhouse of just 160 superficial feet less than my own nets him

\$437.50

Yes, Mr. Nicholson, I agree with you, comparisons are indeed odious as you say in your letter to the *FLO-RIST* of Jan. 29. My dear sir I wish to state to you that the insignificant little dab of \$437.50

which you so gloat over as four months' revenue from your new 2,000-foot greenhouse would barely pay the yearly tax on that much real estate if you were situated and doing business under the same circumstances as myself.

Mr. Nicholson says that Mr. Chitty makes a good deal of the fact that in three months he cut within a mere shade of 10,000 flowers from 3,500 plants, I ought therefore to feel satisfied at having been able to cut over 25,000 flowers from 1,500 plants in the same time. Yes, Mr. Nicholson, you may be satisfied, but I can assure you, Mr. Lombard, and the rest of my good natured critics, that you would have to stow a very different business record in these parts if you wished to keep the wolf from your doors, as Mr. Lombard says.

There is another little item I may mention here, on my 3,500 Lamborn plants I can now see at least 20,000 cuttings ready as soon as I have room for them, and on my Lizzie McGowan plants there are at least 15,000 cuttings ready soon as space offers. Gentlemen how do you like the appearance of my statement? Would you like to have it verified?

Mr. Nicholson seems to take delight in referring to carnation Lamborn as Mr. Chitty's pet. I can assure you, gentlemen, that my pet is the one that will enable me to meet my heavy expenses which stare me in the face at every turn. Nothing short of that is a pet of mine. Ponder over the above statements, gentlemen, you will not lose anything by so doing.

Quite lately I had the privilege of reading a letter written by a carnation grower in the vicinity of Boston, in which the writer condemns both the Lamborn and Lizzie McGowan, but I am informed that when Mr. Robert Craig was at Boston during the convention last summer he was so d-lighted with the carnation Mrs. Fisher that he purchased 1,000 plants of that variety. When Mr. Robert Craig was at my place, just before last Christmas, he purchased of me 5,000 plants of Lamborn and 12,000 plants of Lizzie McGowan. Gentlemen, do you suppose that when Mr. Craig was looking at my Lamborns and McGowans he had forgotten all about Mrs. Fisher? Scarcely likely, gentlemen! Scarcely likely! At that time my McGowans were loaded with flowers and Mr. Craig advised me to sacrifice the flowers for the benefit of the cuttings. I took Mr. Craig's advice, gathered all the flowers and a solid bushel of buds, since then no flowers have been allowed to develop.

Now, brother florists, since we are all so good natured over this carnation business, I will tell you what I will do. I will exhibit 25, 50, 75 or 100 flowers of Lamborn against an equal number of Mrs. Fisher at Chicago, Philadelphia, or any where else out of Boston, for any amount of money over \$50 to \$100, that you gentlemen may designate. If you like the flowers can be sent to Chicago in care of the American Florist Company, who can provide the judges. Chicago would be a good distance, the shipping and keeping qualities of both can then be determined at once. I stand ready to put up the money any time.

And, moreover, I stand ready to arrange to exhibit next November at either Philadelphia, Chicago or New York, a given number of Lizzie McGowan against any white carnation in the United States for any amount of money the backers of Lizzie's opponents may decide upon.

H. E. CHITTY.

Paterson, N. J., Feb. 7, 1891.

Fungus in the Propagating Bed.

In reply to the query on page 432 will say that if temperature is kept above 65° and if cuttings are in an ordinary sand bed fungus will develop no matter where you get your sand from. To overcome this use earthen saucers, say from 10 to 12 inches in diameter and 2 inches deep without the drainage hole in the bottom (they can be bought of any potter). A very liberal use of water will keep your cuttings free from fungus. C. EISELE.

Philadelphia.

Replying to enquiry of Jas. Jensen about fungus in propagating bed, I think the fungus was probably in the sand when put in the bed, and the easiest and a sure way to eradicate it is to carefully move his cuttings, and then thoroughly saturate the sand with scalding hot water. This will kill every living thing and leave the sand very nice and clean.

Cohasset, Mass. W. S. PHELPS.

In response to query about fungus in the propagating bed, my experience with this fungus among cuttings and seedlings for quite a number of years does not enable me to speak of any preventive. Modifying conditions are well ripened seed or, as the case may be, cuttings from vigorous healthy plants, and avoiding as much as possible a close ungenial temperature to what the varieties may best require.

From practical observation in partially dry sand or soil the fungus is more destructive than it kept regularly moist, but not soggy wet. However, making a specialty of growing seedling flowering plants I find it to develop in seed boxes with rich or poor soil, and in all conditions of moisture and temperature. The trouble seems mostly to come from the plant's side, rather than from the sand or soil. A flat of Phlox Drummondii seedlings will almost invariably come through free, while almost any stock of *Impatiens*, *Primula*, *Viola*, *Geranium*, *Verbena*, *Penstemon*, *Salvia*, *Campanula*, *Delphinium*, *Hydrangea*, *Philadelphus*, *Abutilon*, *Double petunias* and *verbenas*.

If the bed is very much affected best throw the sand out, otherwise if stirred around frequently till partly dry I have found very little trouble by using it over. If the fungus gets in contact with wood, as the sides of the cutting bench or flats, germs of it will develop afterwards from such contact. Tanned or oiled paper put over the place will prevent it.

My only remedy for this pest is vigilance, going the round at least once and often twice a day over the cuttings and seed boxes. The morning is a good time, and if the least spot is observed it is scooped out to its utmost extent, and keeping a pan of perfectly dry sand as hot as a steam pipe will make it, such affected places are covered with it, and a close watch kept for a few days to note any further development.

It seems heroic treatment, but I have never killed any cuttings or little seedlings in this way. DANIEL K. HERR.

Lancaster, Pa.

I would advise Mr. Jensen to do away with his nervousness in applying water. Keep your propagating bed moist and if it needs water in the evening water it. And keep temperature below 70° over night. I think the fungus makes its appearance mostly in a cold spell when the outside air is dried out by strong wind and this and a brisk burning fire make

WILLOW POND IN THE ARBORETUM. MISSOURI BOTANICAL GARDEN.

LODGE FOR GARDEN PUPILS. MISSOURI BOTANICAL GARDEN

the air and bed in the house very dry, and the temperature is likely to go too high. Anyway after every cold snap we read in the *FLORIST* of greenhouses having been destroyed by fire. A little ventilation also helps to keep off the fungus. I do not think it makes any difference what kind of sand is used.

If Mr. Jensen will take care not to let the sand dry out and keep a temperature of not over 70° during the day and 65° nights, and not keep the house too tight, I should like to have him tell us after a few weeks how the fungus behaves under such conditions. EDMUND BRAUER.

McConnellsville, O.

The Pitcher & Manda Exhibition at Short Hills, N. J.

This fine display of choice flowers will undoubtedly eclipse anything this firm has done in the past. They have open at the present time over seven hundred of the newer and choicer varieties of cypripediums, and over six hundred cattleya blooms, besides innumerable varieties of this great family. Among the choice cypripediums are to be found vexillarium, nitens, punctatum, violaceum, Measuresianum, regale, Sallierii Heyanum, bellatulum, villosum alba marginata, in quite a number. These new and choice varieties certainly show up very fine. Regalia, Sallierii balauchalum, villosum alba marginata are three new seedlings, never before blooming, crosses between Boxallii and venustum, showing very strongly the parentage of both. Another, which promises to be a very fine thing, is a cross between the Argus and supercilare, showing distinct characteristics of both. Among the general collection is the beautiful Arthurianum in all its graceful elegance.

Another very beautiful thing to be found here at this time is a new dendrobium never before bloomed in this country, a cross between Ruckerii and nobile; the petals are pure white, with a beautiful curved lip of yellow ground, mottled and striped throat with points bending at the base, and is a most charming thing. This is one of the seedlings raised in the late collection of Mr. De Witt Smith; and has been looked upon by the orchid world with a great deal of interest for a long time. Mr. Manda, who is probably as well versed in orchids as any man in the world to-day, considers it the finest specimen he has seen in a long time. Among other choice things to be found in this fine collection are the lycaste, masdevallia, both in fine varieties, and Odontoglossum crispum in its varied shades, forms and colors, being in itself quite a show, and worth going far to see. This is always welcome to all orchidists. The truly rare East Indian orchid Cymbidium Lowianum also figures conspicuously, and Cattleya Speciosissima, Percivaliana and Trianae; Saccolabium giganteum and dendrobiums in great variety. There are also fine specimens of Pharus grandifolius, and a great many other varieties of this popular family.

In their new range, which is very compact and well suited for the purpose for which they intend it is a large house, 160 feet long, twenty-four feet wide and twenty feet high. In this will be found a magnificent collection of palms, tree ferns and choice decorative plants, many of them almost touching the roof at the present time. The other houses are twenty by eighty, and contain a very fine stock such as a business firm of this character requires for the general trade. The first is devoted to propagating and is filled to overflowing at the present

time with choice stove and greenhouse plants, many of them very new and choice things which this firm has recently imported. Number two contains anthuriums, alocasias, etc., among which are included all the newer and choicer varieties of recent introduction. Number three contains a large number of superb Pandanus Veitchii, dracaenas and choice ferns, including Farleyense. Number four contains many rare kinds of ferns, palms, etc., young stock, all choice varieties. Number five contains all the choicer and newer kinds of palms of recent introduction. Number six presents an exceedingly attractive appearance; it is almost completely filled with the magnificent decorative plant Aracaria excelsa, and the way they are arranged in the house makes a very beautiful spectacle. Number seven is filled with choice azaleas and greenhouse plants generally. Number eight is filled with the choicer varieties of the latest introductions of chrysanthemums, showing great promise for the coming fall as many of them were not put out last year, and have been increased rapidly. So we may reasonably expect to see many choice varieties the coming season to swell the already immense number on the market.

The remainder of this range is now being constructed, and when completed will make one of the finest commercial ranges of glass to be found in the vicinity of New York. Great credit is due to this firm for their enterprise. Many of their visitors whom I have seen this week have expressed themselves as being particularly well pleased with the show.

Much is said and written about trying to increase the love of flowers and the diffusion of a knowledge of horticulture; this firm is certainly winning for itself a very enviable reputation in that line.

J. N. M.

Exhibitions.

Your correspondents have so far failed to mention one of the most necessary points to the best success of an exhibition, and one that if put in general practice would demonstrate the fallacy of its omission. I refer to the practice heretofore prevalent in this part of the country, of issuing exhibition schedules a few weeks and in some cases only a few days before an exhibition. It is utter folly to suppose that an exhibition can be first class where this practice is the rule. There are undoubtedly many good plants brought out on the spur of the moment, but to bring out the exhibitors in full force, and also the greatest number of good plants, it is necessary that the growers have ample time to prepare, and to know what to prepare.

When a society has no permanent exhibition place, and it is impracticable to name the location seven or eight months previous, this need not hinder the early issue of a schedule. Intending exhibitors could be notified in time to make their arrangements. Another great drawback to success is the lax enforcement of rules. The exhibits ought to be all in place, the judging done, and premium cards attached before the public is admitted. Herein lies one of the principal features of interest to the growers and the public.

Fairfield, Conn.

JOHN DALLAS.

Crude Oil for Fuel.

In response to the queries regarding the use of crude oil for fuel Mr. August Krueger, of Mendville, Pa., sends us a newspaper clipping describing a new

burner recently patented by a resident of his city and which is said to work very satisfactorily.

News Notes.

SALEM, N. C.—C. A. Hege has started into the florist business here with one greenhouse, heated by hot water.

CORUNNA, MICH.—Henry Welfare is building a greenhouse here and should be added to the directory list at this place as F.

SAN DIEGO, CAL.—The Oreutt Seed and Plant Co. are planning one of the largest collections of cacti in the United States at the terminus of a cable line here. It interests hundreds of visitors.

ARCOLA, ILL.—Percy W. Armstrong, who has been a fruit grower and market gardener here for some time has built a greenhouse 12x60 and proposes to add the florist and nursery business.

SYRACUSE, N. Y.—The annual show of spring flowers by the Central New York Horticultural Society will be held April 16 and 17. The premium list may be had on application to H. Youell, secretary, 228 Beecher street.

AUSTIN, ILL.—The greenhouses of Jos. Shaw were partially destroyed by fire the night of the 9th inst. Most of the stock for spring trade was destroyed. Loss about \$3,000, no insurance. Fire is supposed to have started from a lamp which was left on the potting bench.

BARABOO, WIS.—The damage to the greenhouses of Wm. Toole by the recent fire was not as great as reported. But one greenhouse was injured, and the contents of that house only was destroyed. His pansies, of which he makes a specialty, were in the other houses, and the injured house is now being repaired. His seed establishment is entirely separate from the plant growing outfit and was in no way injured.

GALT, ONT.—At a well attended meeting held February 10 the Galt Horticultural Society was organized with an initial membership of 112, and officers as follows: Mayor Lutz, president; John Wells, vice-president; Thomas Vair, secretary; James W. Scott, Thomas Vair, Geo. Gardner, Alex. Common and Williams, directors. The society intends holding two exhibitions, one in September and the other in November.

PITTSBURG.—Two more greenhouse fires within the last week. The greenhouses of the Hon. Judge Collier, at Sharpburg, and J. S. Bragdon, Nevil Island, were burned, the loss being total in both cases, and with no insurance. Friends of Alex. Murdoch will be pleased to learn that he is able to be about again after a severe illness of about four weeks. The statement about the club house is an error. The club will rent quarters and a club house is merely a possibility of the distant future.

SPRINGFIELD, MASS.—Horticultural Hall was packed the evening of February 6 to listen to the paper on "Out Door Flower Gardens" by Wm. Falconer, of Glen Cove, L. I. It was an able and interesting talk from beginning to end, and the large audience gave the closest attention. Mr. Falconer was elected the first honorary member of the society; which now numbers 552 members. Mr. Wm. H. Spooner, President of the Massachusetts Horticultural Society, has also been made an honorary member. Mr. C. L. Burr is president.

The Badge Business.

EDITOR AMERICAN FLORIST:—In your editorial comment on my communication in respect to "the badge business" you do me unintentionally an injustice. The impression is made that in some way I benefit by the scheme, and that I am unreasonable in not working it for the \$25 offered in 1890.

Why should I be even asked to do the work of the society's officers, as ordered by the society itself? It is true that I did, in 1889, offer to bear all the expense except postage money, in my anxiety to leave the thing accomplished, *provided* the secretary would send out the plan with the programme. This offer was positively declined. Now can anybody suggest a reason why I should do the work also in 1890 for nothing, or for one-sixth its cost, after definite action by the society ordering it done by the executive committee? True, I have at various times printed the programmes of the annual meetings without charge when the S. A. F. was young and poor, but is the treasury now not able to stand the strain of carrying out the orders of the society?

There was time enough, as my correspondence will show if necessary, to have secured the assent of the executive committee to the use of more funds in 1889. And where does this plea relieve the executive committee in 1891 from transcending its authority and definitely turning down the plan as ordered at Buffalo?

J. HORACE MCFARLAND.

Feb. 14, 1891.

[Our comment last week was this: "Chairman McFarland had in 1889 offered to do the work free; for 1890 they offered him \$25.00. This he neither positively accepted nor positively declined until very near the 1890 meeting; too near to arrange for more money to do the work."] *Wherein it conveys the impression that Mr. McFarland benefited by the scheme we fail to see, however we print his additional letter.*—Ed.]

CLEVELAND.—"C." says: "I am very sorry that I have made an error in regard to what I supposed to be reliable information. The item in regard to the marriage of Mr. Wm. Leitch and Miss Martin being emphatically denied by the young lady when congratulated by the writer, I regret exceedingly that it has happened, it being told me in the presence of others in such a way that I did not for a moment doubt its truthfulness, until contradicted by the lady interested."

CIRCULATE your spring trade lists in our EASTER NUMBER, to be issued March 19 and to contain forty pages. That number will be a beauty.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—As gardener or florist; 7 years' experience. Best of references. Address **SIDNEY LANE**, 1 Spring St., Oneonta, N. Y.

SITUATION WANTED—By a florist; aged 22 years; speaks German and English; 1 year's experience in commercial plants, State wages. **E. VOIGT**, # Bartlett St., Brooklyn, East River, N. Y.

SITUATION WANTED—By March or April, by a Dane, as gardener's assistant, private or commercial place. Good references; 7 years' experience. Address **R. F.**, care Am. Florist.

SITUATION WANTED—By a practical florist and gardener as foreman in greenhouse work, to take charge of private place; German; 12 years' experience. Good references. Address **R. E.**, care Am. Florist.

SITUATION WANTED—By a young married man as florist and gardener; private or commercial. Best of reference. Address **R. G. P.**, care H. P. Potter, 24th & Market Streets, Wilmington, Del.

SITUATION WANTED—As gardener and florist; 10 years' experience in growing tropical plants, orchids and bedding plants—4 years in last place, with all references. Address **A. BASS**, 213 E. Illinois St., Chicago.

SITUATION WANTED—As manager. Rose-growing a specialty. Also propagating, etc. Good, sound references from the most reliable sources. Firms. State salary and full particulars of plant to **M. C. care J. C. Vaughan**, box 98, Chicago.

SITUATION WANTED—By a first-class florist; 14 years' experience, good rose and general grower. Can handle fine stove and greenhouse plants, ferns, palms, orchids, etc. Good references. Address **B. A.**, care American Florist, Chicago.

SITUATION WANTED—As headgardener on private place, by Scotchman; married; aged 30; 12 years' experience in all greenhouse work. Strictly sober and reliable. Best of references. Address **THOMAS WALDIE**, 115 George St., New Haven, Conn.

SITUATION WANTED—By a florist of 5 years' experience. No private or preferred—private or public place. Good references; married man; understands all kinds of greenhouse work; also floral or party decoration. Address **FLORIST**, 38 Tracy St., Utica, N. Y.

SITUATION WANTED—Any firm desiring a first class rose grower, etc. I wish to recommend my manager as I am about to take charge of my place March 1st and am anxious to see him in a reliable position worthy of his ability. Address **CHAS. W. REIMERS**, Louisville, Ky.

SITUATION WANTED—By a first class gardener; 25 years old; single man; German; thoroughly experienced in house and greenhouse work, in roses and vegetables. Good references can be given. Address **H. B.**, care Fritz Wesp, corner Soledad and Roman Streets, San Antonio, Texas.

SITUATION WANTED—By young man, 28, in commercial or private place; understands the growing of roses, carnations, grapes, inside and out; good mushroom and vegetable grower. Salary moderate; good references from present and previous employers. State wages. **J. W.**, care James DeBow, 242 Eighth Ave., New York.

SITUATION WANTED—By March or April 1st, by a practical florist and gardener, competent in all branches, private or commercial; good grower of roses and cut flowers generally, vegetables, etc.; 30 years' experience; best of references; German. Good references. Mental salary. Address **G. A. 10**, Postoffice, Cleveland, Ohio.

WANTED—A young man with some experience as assistant. References required. Address **JOHN RECK**, Bridgeport, Conn.

WANTED—A young man with some experience in greenhouse work, etc. Address **B.**, care American Florist, Chicago.

WANTED—An industrious young florist with good knowledge of general greenhouse work. Address **Box 10**, care American Florist, Chicago.

WANTED—A young man for store, experienced in cut flower and design work. Address, giving references. **W. G.**, care American Florist.

WANTED—An energetic, competent florist to grow general stock for commercial place. Salary moderate. Address **Box 20**, care Am. Florist.

WANTED—Bookkeeper and correspondent, one who is experienced in seed and plant business. Give references. **Lock box 1018**, Philadelphia, Pa.

WANTED—An able, working gardener, to take charge of vegetable trial grounds. Must have experience in growing all kinds as well as keeping records. Address **HENRY A. DREER**, Philadelphia, Pa.

WANTED—Industrious young man with some experience in greenhouse work as assistant in market gardening and plant growing business—German preferred. State wages expected. Address **RUDOLPH GUYER**, Ft. Wayne, Ind.

WANTED—By middle of March, German, married man to take charge of cut flower department in commercial place, to grow for Boston market. Must be good rose grower. Permanent place for good man. Address, giving experience, references, age and wages expected, **ROSE GROWER**, care American Florist.

WANTED—In country; married; one that has had experience in gardening with good departmental foreman. Good recommendations required. Wages: \$65 per month with house. Also wanted young man; must be a first class plantman. Wages: \$35 per month with board. Apply to **A. FORKUS**, 11 Supt. Riverside Cemetery, Denver, Colo.

FOR SALE.

Five greenhouses in town of 6100, good shipping facilities, railroads leading in six directions. One of the best openings for a live, capable man. Property free from all incumbrances. Sufficient capital required, good security for balance.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Monday to secure insertion in the issue for the following Thursday.

Address THE AMERICAN FLORIST CO., Chicago.

EXHIBITIONS.

We have of late received numerous requests for information regarding the work of preparing for an exhibition, especially of chrysanthemums. These we have answered as fully as we could by mail, but as the number of inquirers seems to increase rather than diminish, and as the last inquiry is so comprehensive, we present it to our readers believing that some hints upon even the minor details of exhibition management will be acceptable to a large number. We trust that some of our readers will endeavor to give the desired information. Here is the inquiry:

"Will you favor me with a programme of some of your leading chrysanthemum shows, together with the plan of getting them up, charges, etc., the probable expenses, list of premiums, gate fees, fee, if any, for entry for exhibition. The florists think of getting up a show for next fall and we don't know how to begin."

ADVERTISERS of doubtful reputation can not gain admission to the columns of the FLORIST. Weedit our advertising columns as well as the rest of the paper, and exclude any regarding whose methods of doing business there is any question. And further, when any complaint regarding the methods of any of our advertisers is received we at once investigate the same, and if there is a suspicion of fraud that advertiser is promptly excluded from our columns. We do this not only to protect our readers, but in justice to our other advertisers. We have done a great deal of work and incurred some little expense in getting certain ones "located," but we are here to look after and advance the best interests of the whole trade, and we propose to do it.

SIERRECIT & WADLEY's fifth annual orchid exhibition will be held this year at the Madison Square Garden, New York, the Eden Musee being found too small for the increasing number of exhibits. It is proposed to add other seasonable flowers this year and make a feature of new, rare and valuable plants, and an invitation is issued to any one having new varieties of any other plants, as well as orchids, to show them at this exhibition. As the press reports of these shows are always very liberal exhibitors of novelties will undoubtedly receive considerable advertising. Space may be reserved on application to Chas. W. Lee, secretary, Madison Square Garden, New York.

A COPY of "The Rosarian's Year Book" for 1891 has been received. It is edited by the Rev. H. Honeywood D'Omarin, Hon. Sec. of the National Rose Society of England, and published by Benmore & Sons, London. The frontispiece is a pho-

tograph of Mr. George Dickson, a well known grower of the rose, and there are numerous timely chapters upon the rose by various authorities, including one upon preparing roses for exhibition, and concluding with meteorological observations taken during the rose year ending July 31, 1890.

WHEN YOU fail to get your copy of the FLORIST promptly and find that other florists in your city got their copy on time, you may know that there is something wrong in your local delivery or postoffice. The copies for each city are all mailed together wrapped in one bundle, and if one reaches that postoffice then all reach it at the same time, and if any are lost before they reach your postoffice then all are lost. Except in the largest cities where so many copies go that several bundles are necessary.

SOME very fair blooms of Chrysanthemums Mrs. Frank Thompson, Lillian B. Bird, Robt. Crawford, Mt. of Snow and Mrs. Langtry are sent us by Mr. H. L. Phelps, Springfield, Ill., who writes: "While I do not consider these extra fine specimens, yet for a second crop think they are pretty good. Have been able to cut four chrysanthemum flowers right along. Would especially recommend Mt. of Snow as a good late and continuous bloomer. If kept growing all side branches produce good blooms."

WE HAVE received from Mr. George Hancock, Grand Haven, Mich., a dozen blooms of a carnation labelled "Nellie Lewis," and they do seem to be identical with the variety of which blooms were sent us by Mr. Vick and which we recently noted in these columns. Mr. Hancock's flowers reached us in much better condition than those sent by Mr. Vick, and they make a rather more favorable showing for the variety.

A CHICAGO florist has a wagon very effectively arranged for the delivery of blooming plants in cold weather. The rear of the wagon is occupied by a miniature greenhouse with a door at the end. It is at once an instant attempt, filled as it generally is with geraniums and similar plants in brilliant bloom. Of course there is glass in the sides as well as in the roof.

IN OUR rose department appears a record of Woottons cut during a given period from a stated number of plants. Regarding the quality of the blooms, competent judges who saw those shown by Mr. Dale at the meeting of the Executive Committee at Toronto say they were most excellent, some almost equal to American Beauties.

AN EASTERN florist placed a lamp in his wagon to keep frost out while carrying plants to a residence where he was to arrange a decoration, but on the way it tipped over and set the wagon on fire. The wagon was sadly damaged and the plants ruined before the fire could be subdued.

PRINT your spring trade list in our double Easter number, to be issued March 19, and send copy early, not later than March 14, and as much earlier as you can. This number will go to every name in the American trade, and 500 extra copies to the best firms in Europe.

WHEN WRITING to advertisers, please mention the fact that you were induced to write by the advertisement in the AMERICAN FLORIST. You will benefit us by letting advertisers know that it is the FLORIST that is bringing them trade.

ELABORATE preparations are being made for the coming exhibition of the New York Florist Club to be held April 7. Premium lists may be had and space reserved on application to John Young, secretary, 53 West 30th street.

A BLOOM of rose The Bride, which is fully expanded, very double and measures fully five inches across has been received from Mr. A. Hallett, Fayette Springs, Pa. It is a massive bloom.

YOU CAN NOT afford to take any chances on your spring advertising. The only way to reach the WHOLE TRADE is through the AMERICAN FLORIST.

MR. JOHN YOUNG has been elected secretary of the New York Florist Club to fill the vacancy caused by the resignation of Mr. W. S. Allen.

Catalogues Received.

Dingee & Conrad Co., West Grove, Pa., new roses; The Steele Bros. Co., Toronto, Ont., seeds; John N. Mast, Summit, N. J., trade list roses; A. M. & J. B. Murdoch, Pittsburg, Pa., plants, seeds and nursery stock; Reed & Keller, New York, wire designs for florists; O. M. Richardson & Co., Canton, Me., plants and seeds; McMath Bros., Olney, Va., seeds and berry plants; H. Perlich, Baltimore, Md., the Excelsior fumigator; Bush & Son and Meissner, Bushberg, Mo., grape vines; Cold Spring Seed Farm, Big Horn City, Wyoming, seeds and berry plants; Benj. Hammond, Fishkill-on-Hudson, N. Y., insecticides.

Remittances.

Will you be kind enough to say a word in the FLORIST sometime against what appears to be a growing evil, namely the sending of personal checks in payment of accounts, or on orders, etc. I have received a number already this spring. They cost 25 cents to collect, besides the annoyance. I know you favor square dealing, and think this is hardly that, on small amounts.

[As our correspondent says, it is a decided annoyance to receive a check on a bank in some place hundreds of miles away for a small amount. And it is certainly unjust to subject the payee to a tax of 25 cents on a payment of a few dollars only. Where such checks are sent it is no more than right that the sender add 25 cents to the amount of the check to pay the bank's charge for collecting.—Ed.]

Cypripedium Curtisii.

This species until quite recently was rarely met with except in very select collections. Its native home has since been rediscovered and we now find it grown much more extensively, and universally admired; it still occupies the front rank among this fascinating genus of plants. It is far more beautiful than many hybrids, however expensive. Like the majority of cypripediums it is easily cultivated and produces its large blossoms freely. It thrives well in a temperature of 65° to 70° during the summer months with a gradual decrease from 60° to 65° as winter approaches. Fibrous peat and clean sphagnum moss in equal proportions proves a good compost. A. DIMMOCK.

☞ The Seed Trade.

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president; JOHN FOTTLER, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1891.

Results of the Prize Seed Advertising Contest.

PHILADELPHIA, Feb. 9, 1891.

EDITOR OF AMERICAN FLORIST.—In competition for the cash prize of \$50 offered "for the advertisement best calculated to bring trade to us," as per announcement in the AMERICAN FLORIST of December 24, 1890, we received up to and including Monday, February 2, when the competition closed, 689 advertisements from 247 separate competitors, a most unexpected number. Since then we have received several others, which, arriving too late, were not entitled to enter the competition.

You can imagine that it was no easy matter to examine all these designs and award the prizes. We enclose you herewith proofs of the prize advertisements; the first prize, for the advertisement headed "Only Good Seeds Bring Forth Good Crops," followed by "Burpee's Seeds" in large type, was designed and set up by Messrs. Johnston & Nelson, 10 Spruce street, New York, to whom we have remitted our check for \$50. You will probably agree with us that while this advertisement is not calculated to bring direct sales in anything like the proportion of one of the second-prize advertisements, entitled "Pansy Seeds Free," of which we also enclose you proof, and of which we will speak further on, yet it cannot fail to leave a good impression upon the reader of the fact that, we have seeds for every purpose, and that we have absolute confidence in the unsurpassed quality of our seeds.

As we have stated in a previous article, and would here reiterate, our opinion is that the most important point in advertising is to create a favorable impression upon the public, rather than to aim for direct returns. In our offer we promised to give \$25 as a second prize should we receive a second advertisement that was particularly good; we duplicated this offer, and mailed a check for \$25 both to Mr. Wylie B. Jones, of Burlington, Vt., and also to Mr. Charles M. Snyder, of this city. We enclose proof of both these advertisements, and have also expressed to you electrotypes of the three. You will please insert in your advertising columns the same week as the appearance of this article the first prize advertisement, the week following the second prize advertisement of Mr. Jones, headed "Rarest and Finest Novelties," with illustration of pansy, and the week following the advertisement of Mr. Snyder, entitled "A Wide Awake Man."

Your readers will notice that Mr. Jones' advertisement, while headed "Rarest and Finest Novelties," brings out in bold type "Pansy Seeds Free." The advertisement embraces the same offer as that already extensively used by us, but instead of offering five packets for twenty-five cents, it offers four packets and a packet of Imperial Prize Pansy seed free. Mr. Jones in his accompanying letter argues that on the well known weakness of human nature to get something for nothing this advertisement, while identically the same offer as otherwise expressed by us, will probably draw one-third more returns. We

have already ordered its insertion in some papers in which our previous advertisement has appeared, and can tell later as to the soundness of his judgment. There is another feature of this advertisement that we think is most admirable, that is that the curiosity and interest of the reader is secured by the opening paragraph, which he must necessarily read through to arrive at its sense. Furthermore, the composition and display is most admirable and has been set up in Philadelphia only slightly different from the original setting in Burlington, Vt.

Altogether unique in the list of seed advertisements is the one entitled "A Wide Awake Man," which secured a prize of \$25 for Mr. Snyder. Although occupying only five inches double column, yet with the illustration of the wide awake man and the open appearance it cannot fail to attract attention even upon the most crowded advertising pages. As a rule we do not believe in comic illustrations, but this advertisement in securing the attention of the reader so far as to read through the opening paragraph will probably prove sufficiently interesting to insure its complete perusal. The closing expressions of the first and second sentences are also capital—"A farmer can plow, harrow and take all manner of pains in his work with some enthusiasm if he knows that he is tickling the earth to make really good seed laugh into harvest." "This for an introduction; may the acquaintanceship ripen."

It will be noticed in all these advertisements the type is of good size, not crowded, but open in appearance. We are inclined to believe that heretofore, in common with nearly all other seedsmen, we have erred in crowding too much matter into our advertisements.

Besides the prizes awarded above in compliance with our offer of a payment of \$5 each for any other sufficiently attractive advertisement to be retained by us, both Mr. Jones and Mr. Snyder received \$5 each and Messrs. Johnston & Nelson \$10, while \$10 each (for two advertisements) was awarded to Mr. H. D. A. Taunton, Mass.; Julius Wilcox, Brooklyn, N. Y.; and C. De Vos, Battle Creek, Mich. We have also sent "honorariums" of \$5 to all of the following for advertisements retained by us: J. F. Foster, Buffalo, N. Y.; Jno. V. Redpath, 33 Warren street, Boston, Mass.; W. E. Philbrick, Lawrence, Mass.; H. C. Brearley, Detroit, Mich.; H. C. Rose, South Bend, Ind.; A. C. Graw, Camden, N. J.; Jno. W. Barwell, Chicago, Ill.; F. E. Moynahan, Danvers, Mass.; G. McPherson, Pittsburgh, Pa.; C. F. Cooley, St. Louis, Mo.; A. H. Hitchcock, 195 Washington street, Chicago, Ill.; A. V. Isakovis, 328 E. 123rd street, New York, N. Y.; Margaret Lee, Mitchell, Ind.; Arthur W. Robinson, 337 E. 36th street, New York; J. J. Terry, 79 Milk street, Boston, Mass.; M. H. Robinson, Atlanta, Ga.; S. Swaine, Rochester, N. Y.; S. M. Pettengill, 38 Park Row, New York; G. L. Great, Chicago, Ill.; M. D. MacDonald, Cleveland, Ohio; Miss Kate E. Griswold, Hartford, Conn.; T. C. Coffman, Dayton, Ohio.

Some of these advertisements for which we have paid \$5 are most excellent and will be used by us with very slight changes, while others contain one or two ideas that will be useful to embody in an advertisement.

If time permits we will in the near future endeavor to bring out some of the ideas suggested by the contestants named, meanwhile we would call attention to the fact that we received from one competitor an advertisement headed as follows:

"Good seeds in good ground yield good crops; we supply the seeds, you gather the crops."

This advertisement arrived some weeks since and the very taking catch phrase has been ringing in our mind ever since; unfortunately it was filed away so carefully that we are unable to find it and get the name of the sender. If he will kindly advise us of his address we will immediately forward our check for \$5 in acknowledgement of same.

W. ATLEE BURPEE.

REPORTS from 13 different seedsmen in the catalogue trade indicate an increase in the mail business to date from 30 to 100 per cent over last year. The cause of this they are not agreed on. Some attribute it to the mild weather of the apparently advanced season; others to draughts last season, which prevented saving of seeds; still others to the natural increase which the systematic conduct of their affairs naturally entitles them to. We suppose they are all right.

COMPLAINTS reach us that Canadian customers of American seedsmen are compelled to pay from 5 to 10 cents duty on the seed catalogues sent there through the mail. Customers complain both of the "Bill McKinley" and their own customs regulations.

THE Eastern Nurserymen's Association, under date of January 30, agitates the question of reduction of letter postage to one cent, and have resolved that their organization is in favor of such reduction.

MR. BEN SALZER, of John A. Salzer Seed Co., has decided to locate in Denver for his business. He will probably devote himself to the lumber business in that city.

Cost of Water Supply.

In the FLORIST of January 29 Mr. R. E. Shuplett asks some questions about cost of water supply. As no one replied I will give my experience. I take my supply from city water works. Used to pay \$25 per year, then they raised the price to \$50, so I put in a meter, for which I had to pay about \$16. Used the first year \$26.25 worth, at the exorbitant price of 50 cents per thousand gallons, averaging about \$3.70 for each one thousand feet of glass per year. The rate is the highest their rules allow, and is about four times as much as other cities ask. The supply is from the river. Water companies, as a rule, seem to think that florists must consume immense quantities of water, while in fact I often see more run to waste on a private lawn than I use. D. P. SMITH.

Flint, Mich.

Ice Boxes.

It would no doubt interest a great many readers if somebody would explain how a cheap ice box may be constructed, say for a place where about 200 buds are cut daily. As a matter of course they accumulate sometimes, so the box ought to be large enough to contain about 1,000 roses.

Is it best to have the ice above the flowers, and can the box be made into partitions, so in case the whole space is not needed one part may be shut off? D.

MARCH, 1911 we shall issue a 40-page number, which will be most beautifully illustrated and will contain a number of special features which will make it of unusual value.

SEEDS that will Yield Abundant Crops.

SEEDS to Sow that will Surely Grow.

SEEDS for the Flower Plot or Window Box.

SEEDS for the North, South, East and West.

Burpee's Seeds are the Best.

To Paint the Lily

Would be the mere mention by us of the excellent quality of our Farm, Garden and Flower Seeds to those who have used them. They know they are the best, and to speak of their real merits is like

Gilding Gold.

To those who have never used our Seeds we say: "Try them." A trial will be a much better advertisement for us than we can pen.

Once a customer, a customer always.

The Popularity of our Seeds increase year by year, and we deal direct with more Planters than any other Seed House in the world. In the busy season we receive daily from 1,000 to 5,000 letters and postal cards.

Six Choice Novelties. *Burpee's Red Elm Pepper, New Golden Self-Blanching Celery, Vandergrae Cabbage, Burpee's Hardy-Head Lettuce, The Delaware Watermelon, and The Mottched Tomato.*—One full-size packet of each, with plain directions for culture, will be mailed to any address on receipt of 25c., or any three of these **Choicest New Vegetables for 16c.** (8 two-cent stamps). Our Farm Annual for 1891 will be mailed free to all favoring us with an order. All our Seeds are warranted. Write us to-day.

BURPEE'S FARM ANNUAL for 1891.

With Colored Plates Painted from Nature, 166 pages. Free. Full of hints to those who know, and valuable information for those who want to know about Farm, Garden and Flower Seeds, Plants, Shrubs, Lilies, Gladioli and other Summer-Flowering Bulbs. **Rare Novelties** are described, many of which can only be had direct from us. It tells how to get valuable premiums, including Mrs. Rorer's New Book, just out—Free. Write to us at once and secure free this valuable Farm Annual. Write to-day.

JOHN J. CONNELLY, Bryn Mawr, Pa.

Philadelphia.

If the business for the first days of Lent is any criterion, the sackcloth dealers will have very little to do. Trade has been lively and promises to continue so, while good flowers have actually been scarce. Small roses and good hybrids are in great demand, as all the crops seem to be off at one time. Snailax and asparagus is nearly all cut out. Carnations are plentiful except Wilders, and are selling very well. The Wilder is always in demand. Many new varieties have been brought out that next year would "knock" this beautiful carnation, but it is still the queen of pinks.

Mermets, LaFrance, Brides and Hostes are now bringing \$8 to \$12, Cusins and Watteville's 8 to 10, Perles and Gontiers 5, Laings and Luizets 35 to 50, Brunners 75, carnations 1.50 for all but Wilders, which bring 2, valley and hyacinths 3 to 5, tulips 4 to 5.

A great many tulips are sold here in flats or small boxes which hold about fifty plants. The florist is able to make a show with these boxes, and cuts the flowers off as he wants them. Mr. Wm. K. Harris supplies most of the trade. He has been very successful in growing tulips and has the field almost entirely to himself. He also makes a specialty of azaleas, and has a fine stock of window plants all through the season.

The Evans rose nurseries are about putting up additional houses for palms and ornamental foliage plants; roses and orchids have been their specialties heretofore. Palms can now be said to be fairly plentiful with the supply equal to the demand.

The club house is a popular place of resort, and the bowling alleys are well patronized. Scores are now up to 224 and 240, made by Messrs. Lonsdale and Kirt. A number of matches have taken place and the team that bowled at Boston has been bowled out of existence. O.

IF YOU HAVE anything to sell to florists don't fail to advertise it in our special Easter number of forty pages, elegantly illustrated, and with a number of other special features. No increase in advertising rates.

SPECIAL OFFER FOR CASH, TO MAKE ROOM.

Orders booked in rotation and good stock guaranteed. Reasonable prices given upon application. Address **GERMOND & COSGROVE,**
Rockland County, SPARKILL, N. Y.

THE NEW ROSE WABAN.

This very valuable rose originated at the Waban Conservatories of E. M. Wood & Co., Natick, Mass. It is a SPORT from Catherine Mermet and identical with that variety in every characteristic, excepting color, which is a rich, deep, BRIGHT PINK; it sustains the same relation to its parent as Duchesne of Albany does to La France. The only objection to C. Mermet is its frequently pale, insipid color in cloudy weather; experience has shown that the WABAN retains its deep rich color in all kinds of weather; it will, without doubt, prove to be as valuable as THE BRIDE which is also a sport from the same magnificent variety.

IT HAS ALREADY RECEIVED THE SILVER MEDAL

of the Massachusetts Horticultural Society; of the Pennsylvania Horticultural Society, and Certificate of Merit from each of the Societies in this country and Canada where it has been shown.

READY FOR DISTRIBUTION ON APRIL 15th, 1891.

ORDERS BOOKED NOW, WILL BE FILLED IN STRICT ROTATION.

Extra good plants from 2½-inch pots.

From 4-inch pots.

1 Plant, \$ 1.00	250 Plants, \$100.00	1 Plant, \$ 1.50	50 Plants, \$ 40.00
12 Plants, 9.00	500 " 175.00	12 Plants, 15.00	100 " 75.00
50 " 30.00	1000 " 300.00	25 " 25.00	
100 " 50.00			

The following Agents have been appointed to sell the Rose in the respective territories given below:

W. J. STEWART, 67 Bromfield St., Boston, Mass., for the New England States (except Connecticut) and Quebec.

JOHN N. MAY, Summit, N. J., for Connecticut, New Jersey, New York, Michigan, Indiana and Ontario.

ROBT. CRAIG, 49th & Market Sts., Philadelphia, Pa., for Pennsylvania, Ohio and all Southern States, east of the Mississippi River, and District of Columbia.

J. C. VAUGHAN, P. O. Box 688, Chicago, for Illinois, Wisconsin, Minnesota, and all States and Territories west of Mississippi River and Canadian Territory west of Ontario.

Our stock of this variety will all be re-handled at our own greenhouses so they may be in the best possible condition when they leave our place, on the same date as sent out from Boston—April 15. For this reason customers in OUR TERRITORY will we believe do well to secure their supply either directly from us or through jobbing agents using our stock. We will give names of such on application.

J. C. VAUGHAN, CHICAGO.

WABAN.

CUSTOMERS AND OTHERS PLEASE NOTE.

In my Trade List just sent out a printers' error occurs, it reads "25 2½ plants \$30.00"; it should read 50 plants 2½ \$30.00.

JOHN N. MAY, Summit, N. J.

ROBERT BUIST, Jr., Importer and Grower of Seeds, Philadelphia, Pa.
Warehouses—No. 922 & 924 Market St.

GOLDEN BEAUTY TO THE FRONT.
I have never failed, but have stood the more practical test, for no early yellow Chrysanthemum gave better satisfaction to seller and buyer than the above. Such was our experience, and also of all who handled it. What they say:

"We handled no early yellow that sold better or gave better satisfaction to the buyer."—James Carlledge, of Fenwick, Bros., 1514 Chestnut street, Philadelphia, Pa.
"You can get nothing better than that."—Wm. Voght, Jr., 341 and Cooper Sts., Camden, N. J.
It was described in these columns last year, and we leave it to tell its own story. Subsidy it to say that our claims for it have been more than sustained, and that it combines all the essentials of a first class market variety for potting and cutting. Ready in quantity March, April and May. 12 for \$1, 100 for \$8. You can not afford to get left on this offer. Orders booked now are filled in rotation as far as plants are ready, by express or free by mail.

THE NEW DOUBLE WHITE DAISY SNOWFLAKE.
One of the best things out for winter flowers. Will grow and bloom all winter in a cold frame and if well covered cold nights will need no better quarters. Gives splendid returns. It does not seed, and can only be increased by division. Flowers pure white, very double, and beautifully quilted. As large as a 5c. piece. Ready now. 12 for \$1, 100 for \$8. Sample plant and bloom free by mail on receipt of 10 cents.

See other special offers in another column.

A SOLID AGRE OF HARDY PINKS SOLIDLY FROZEN

Into the ground, but will thaw out BRIGHT and EARLY. Orders booked now for Spring Shipment.

THESE PINKS do not produce seed, but increase from the root, and live year after year in the open ground. Send for list to

THADDEUS HALE, South Byfield, Mass.

Chicago.

The contemplated spring exhibition has been abandoned, it having been decided that the time for preparation was altogether too short. But work will be at once begun on the details of the fall exhibition to be given during the chrysanthemum season, and something will be done toward preparations for a spring exhibition next year.

No business of importance was transacted at the last meeting of the Florist Club except to listen to the report of the committee on exhibition, of which the substance appears in the preceding paragraph. Mr. Chas. Dannacher, of Davenport, was present as a visitor and gave an interesting history of the experiences of the Tri-City Florist Club.

Mr. E. C. Reinman, president of the Pittsburg and Allegheny Florists' Club paid Chicago a visit last week. He says the P. and A. Club has now 110 members and is still growing. Pretty lively sort of an infant.

The smilax situation changed just before Lent came in and the demand used up all the available supply.

Trade has held up splendidly since Lent came in, far ahead of expectations. Stock is improving in quality.

One commission man reports an unusually heavy trade with the south, his shipments to New Orleans being especially large.

The organization of the Horticultural Department of the World's Fair still hangs fire. It was expected that the appointment of Chief would certainly be made at the meeting of the Directory last Friday evening, but it did not materialize, though the Chiefs of several other departments were named.

Zirngiebel's Improved Strains

—OF—

WHITE ASTERS, PERPETUAL WHITE STOCKS, GIANT MARKET and FANCY PANIES; NEW HYBRID CARNATIONS, a cross between the Perpetual and Marguerites, and greatly superior for florists' use, in separate colors, pure yellow, white, pink and red shades.

Any of the above seeds in trade packets at \$1.00 each.

Also the choice NEW CONTINENTAL CARNATIONS for 1891. Miss Moore, Mme. Gobet, Roi des Violettes, Bouton, d'Or, Geanne Morel, to be sent out March next.

ALEX. MCBRIDE, ALPLAUS, NEW YORK.

Montreal.

The long looked for annual drive and social of the Montreal G. and F. Club took place on January 27 and turned out to be the most successful and enjoyable social event that has taken place in connection with the club since its organization.

The members with their wives and lady friends to the number of one hundred and fifty drove out to the athletic club house at Cote des Niegues arriving there at 9 o'clock, and when wraps and overcoats were laid aside, dancing to the music of a first class orchestra was indulged in until 11:30, when supper was announced, so an adjournment was made to the spacious dining room, where a sumptuous repast was waiting. After full justice was done to the good things a few toasts were drunk, the responses to which were brief and witty, President Doyle making the decided hit of the evening.

Adjournment was again made to the hall room where a short programme of vocal and instrumental music was enjoyed, the principal numbers being a duet by Secretary Wilshire and his talented sister, a good performance on the concertina by a member, Mr. John Perrin bringing down the house with his comic songs, after which dancing was again indulged in until 2:30 a. m., when the sleighs were ordered and the happy party were soon tucked under the buffalo robes and on their way back to the city, which was reached about 3:30 a. m., every one being satisfied that they had spent a most enjoyable evening, the general wish of the ladies being that the social was weekly instead of annual.

The Gardeners' and Florists' Club held its regular monthly meeting, February 10, there being forty-five members present. The committee having the late drive and social in charge reported their business all settled with a balance of fourteen dollars on hand, which was considered a very successful showing. The committee received the thanks of the club and were discharged. Votes of thanks were also tendered Mr. J. Bennett for having supplied bouquets to the ladies and to P. McKenna & Son for the flowers and plants used in the table decorations. The executive committee reported that the Windsor Hall had been engaged for the March exhibition, also that subscriptions towards the prize list received since the last meeting amounted to nearly two hundred dollars, the dates fixed for the show are the 25th and 26th of March.

It was decided to devote the sum of one hundred dollars to the purchase of a cup for the twelve best plants in chrysanthemums, distinct varieties, to be competed for at the November show; it must be won three times by any member before it becomes his property, a money prize to accompany it each year.

At the January meeting of the club the secretary was instructed to correspond with the different clubs in Canada, with the view of establishing a national cup for cut chrysanthemum blooms, the competition to take place each year where the cup is held. The secretary reported having written to the four principal clubs, but no definite answer having been received from any one of them, it was decided to leave the matter open for further consideration at a future meeting.

"Prof." Ino. Perrin had a paper prepared on "Weather Forecasting," but it had to be deferred until the next meeting on account of the lateness of the hour.

Trade is very dull here just now, and has been so since New Years. Mc.

THE NURSERY BOOK

A Complete Hand-Book of Propagation and Pollination. By L. H. BAILEY,
Editor of the American Garden.

This valuable little manual has been compiled at great pains. The author has had unusual facilities for its preparation, having been aided by many experts in many directions. The book is absolutely devoid of theory and speculation. It has nothing to do with plant physiology, nor with any abstruse reasons of plant growth. It simply tells plainly and briefly what every one who sows a seed, makes a cutting, sets a graft, or crosses a flower wants to know. It is entirely new and original in method and matter. The cuts number almost 100, and are made especially for it, direct from nature. The book treats of all kinds of cultivated plants, fruits, vegetables, greenhouse plants, hardy herbs, ornamental trees and shrubs, forest trees.

Among the contents are the following:

PROPAGATION BY SEED.
PROPAGATION BY SEPARATION.
PROPAGATION BY LAYERS.
PROPAGATION BY POLLINATION.

THE NURSERY LIST is an alphabetical list of all kinds of plants, with a short statement telling which of the operations described in the first five chapters are employed in propagating them. Over 2,000 Entries are made in the list.

ACEE (MAPLE). *Sapindaceae*. Stocks are grown from stratified seeds, which should be sown an inch or two deep; or some species, as *A. dasycarpum*, come readily if seeds are simply sown as soon as ripe. Some cultural varieties are layered, but better plants are obtained by grafting. Varieties of native species are worked upon common or native stocks. The Japanese sorts are winter worked upon imported *A. polinorum* stocks, either by whip or veneer grafting. Maples can also be budded in summer, and they grow readily from cuttings both in spring and softwood.

PHYLLOCACTUS, PHYLLOCEBUS, DISOCACTUS (LEAF CACTUS). *Cactaceae*. Fresh seeds grow readily. Sown in rather sandy soil, which is well drained, and apply water as for common seeds. When the seedlings appear, remove to a light position. Cuttings from mature shoots, three to six inches in length, root readily in sharp sand. Give a temperature of about 60°, and apply only sufficient water to keep from flagging. If the cuttings are very juicy, they may be laid on dry sand for several days before planting.

GOOSEBERRY. Seeds, for the raising of new varieties should be sown as soon as well cured, in loamy or sandy soil, or they may be stratified and sown together with the sand in the spring. Cuttings, 6 to 8 inches long, of the mature wood, inserted two-thirds their length, usually grow readily, especially if taken in August or September and stored during winter. Strongest plants are obtained by layers, and the English varieties are nearly always layered in this country. Mound-layering is usually employed, the English varieties being allowed to remain in layerage two years, but the American varieties only one (Fig. 27). Layered plants are usually set in nursery rows year after year removal from the stools. Green-layering during summer is sometimes practiced for new or rare varieties.

Price, in library style, cloth, wide margins \$1; Pocket style, paper, narrow margins, 50 cts.

THE RURAL PUBLISHING CO., Times Building, New York.

IMPROVED FARM AND GARDEN TOOLS FOR 1897.

BETTER. Both Horse and Hand, **TIAN EXER.** better and more money saving. We can not describe them here, but our new and handsome catalogue is free and interesting. A goodly number of new tools will meet your eye there. Among these: Gardener's Harrow, Cultivator and Pulverizer, combined, adjustable teeth; Market Gardener's and Beet Grower's Special Horse Hoe with Pulverizer; Special Furrow Marker and Ridger, adjustable wings; Sweet Potato Horse Hoe, four wheel wide tire turner; Heavy Grass Edger and Path Cleaner; new Nine Tooth Cultivator and Horse Hoe combined; Special Steel Leveler and Pulverizer combined; all interesting, nothing we have ever made so practical or perfect. Some improved things to be grafted upon our older favorites. A special **LEVER WHEEL**, instantly adjustable for depth, is a great feature; put on all '31 goods unless ordered otherwise. Nor have our Hand Seed Urills been forgotten in the market. Improved, plain or Double and Single Wheel Hoes, Garden Plows, Grass Edgers, Etc. Some of them are greatly altered for the better; yet do not forget that our specialties are adopted by the best, without actual and exhaustive tests. We therefore guarantee everything exactly as represented. Send for Catalogues now.

PRINT your spring trade list in our double Easter number, to be issued March 19, and send copy early, not later than March 14, and as much earlier as you can. This number will go to every name in the American trade, and 500 extra copies to the best firms in Europe.

FROM COMPLAINTS received we learn that some copies of last issue were imperfect, pages of another journal being accidentally bound in with the FLORIST. Imperfect copies have been received by any who have not yet made complaint to us we ask them to at once notify us that we may send them perfect copies.

The Arrangement of Flowers with Respect to Color.

Perhaps there is nothing in nature or art which appeals more strongly to the sense of the beautiful within us than color; and it is also possibly true that we have never fully gauged our capacity for its enjoyment. We do not, in fact, thoroughly realize our physical relation to color until some accident or change of circumstances disturbs it, and then we are astounded by the fact that the blue sky, the green fields, the many colored flowers, the golden sunsets, the purple mountains, the emerald sea, and the spelt snow make up so large a part of our life. After a long season of dull rainy weather what a pleasure it is to see a bit of blue as big as our hand; and after the dreary winter has dragged itself into the middle of March, how delighted we are to see in the brown earth the first green promises of the purple or yellow crocus.

We are charmed with the nobility and beauty of Greek sculpture, and we are irresistibly drawn to the perfected forms of the old statues, but they are all cold and colorless. And what there is of color in art, never approaches nature. The snowy white of lilies is purer, the transparent gold of daffodils richer, the luscious purple of pansies more courtly, and the blushing pink of roses more lovable, than all the classic art of the world put together. So we must go to the florist for the prime of the world's greatest blessing in color—the flowers; these are they which are clad more than the glory of Solomon, and they come to us freshly tinted from the color box of God.

It is just here where nature ends the matter in a free gift from the Great Artist of the universe, that art begins and the opportunity lies open for the florist. I do not mean in the direction of forced growth and hybridizing, but in that of decoration. Flowers are nature's own ornaments and we adapt them on all occasions and in every possible way to the adornment of our houses and gardens, wisely, but in some cases, I fear, none too well. Our friends, the artistic Japanese, would be horrified to see some of our ornamental anchors, lambs and wedding bells. And they even draw the line at a combination of more than two flowers in one vase.

Perhaps our greatest need in this day of overwork and decoration is simplicity. It seems a hard lesson to learn, however, and we very slowly relinquish our pet ideas of crowding together as many things of a different nature as possible. Nothing is more disastrous to artistic effect than a great variety of colors, which are sure to be more or less inharmonious. In July the green meadows are sprinkled over with innumerable white daisies, and in September the roadsides are aglorious in the yellow and purple of golden rod and aster; no jumble of

color this, but a perfectly evident harmony, simple as it is beautiful.

The question arises what then can we do to render our flower decorations more artistic and enhance their color effects? Two things, apparently. First, we must adhere to every principle of simplicity in color and arrangement, and second, we must avoid artificiality. In illustration of these excellent rules let us take some familiar but characteristic flowers and subject them to a little artistic treatment. The Mrs. Alpheus Hardy chrysanthemum for instance, is remarkable for its frost-like sheen and snowy whiteness. To accentuate these qualities we will arrange it in an ordinary terra cotta vase and place it before a background of carelessly crumpled, rusty black cotton velvet, which will absorb every bit of light that does not fall upon the flower. Now throw the gas jet or incandescent light directly upon the upper surface of the flower, shielding of course, the light from the spectator's eyes. The result will be marvelous. The flower, even though it be far from a spotless specimen, will look, if possible, "whiter than snow." Suppose we try a similar experiment with the Catherine Mermet rose, choosing a sage green velvet in place of the black. Such a rosy glow of color will proceed from the flower as we never suspected it possessed. Now try an artistically careless group of daffodils placed in a common blue and white cylindrical Japanese vase and backed up with a crumpled bit of dusty, grayish, greenish blue velvet or velveteen; there is a mine of gold now in our daffodils, which will be sure to rivet the gaze of every passer by who loves the color of the precious metal. Thus, too, we may treat with equally pleasing results the Cullingfordii chrysanthemum or the Jacqueminot rose, substituting a dull olive green background for the blue one. We will find in this case that the flower will fairly glow with the intensity of its own color. Violets placed in common yellow jars and relieved by a pale yellow background will show a wealth of cool color under an electric light. But all these are instances where we have to deal with single varieties of flowers; the case is quite different when we have a whole window full of almost every possible variety. The florist's window filled with a chaos of form and color never can convey to the eye of the passerby any clear, artistic impression. There *must* be law and order here, and the greatest care should be exercised in the arrangement of effective color groups and form contrasts.

The simplest principles govern all proper color arrangements, and these will be instinctively felt rather than learned by those who will devote a little time and attention to the matter. The first principle is one of analogous harmony and the arrangement of color in the rainbow

is its perfect exponent—purple, blue, green, yellowish green, yellow, orange, scarlet and crimson. The second principle is one of contrastive harmony and the combination of the opposing colors of the rainbow is its perfect exponent. In the first instance we have side by side colors, in the second opposite colors, thus:

Analogous Harmonies. Contrastive Harmonies.

(Crimson,	(Purple,
(Blue,	(Yellow,
(Purple,	(Blue,
(Green,	(Orange,
(Yellowish Green,	(Green,
(Yellow,	(Scarlet,
(Orange,	(Greenish Yellow,
(Scarlet,	(Crimson.
(Crimson.	

It would be an almost endless task to mention those flowers which would combine with each other harmoniously under these two principles. Nature never breaks either of them, and we have an abundant opportunity in the grouping of flowers to follow her excellent example. I know that it is a very strange principle which combines blue with purple, purple with crimson and crimson with scarlet, not to speak of the blue with green; but this will need some explanation. Let us look at some examples in nature. Notice the fuchsia, the John Thorpe chrysanthemum, the lilac, the sweet pea, the passion flower, the morning glory and the hydrangea. These flowers have all of them some combination of color running between the scarlet and the blue. Then among the fruit we see crimson plums with purple bloom, purple grapes with blue bloom, and crimson apples with blue bloom, in fact there is an endless variety of these peculiar combinations of color in nature, which more than establishes her regard for the principle. But one thing we must bear in mind, her methods are subtle and infinitely delicate. Her analogous colors when they are broken up into such small patches that their individuality is lost. I question very much the possibility of placing the scarlet gladiolus beside any crimson or purple flower without a riotous result. And on the contrary I have seen some lovely combinations of scarlet, crimson and purple verbenas. It is unnecessary to defend the principle of combining blue with green, the earth and the sky establish that beyond a doubt. Mix blue forget-me-nots with mignonette and note the result. In the matter of yellow and orange combinations, what is more beautiful than a great bed of marigolds ranging from orange to pale lemon yellow? Yet if we place the *Nesima chrysanthemum* beside the Lincoln the result is disastrous, both are injured. It seems as though yellow is especially effective with white, and a combination of white *carissus* with yellow pansies, or yellow daffodils with white pansies is particularly delicate and beautiful. The truth is, white always combines wonderfully well with all delicate colors, but white roses with dark red ones, white pinks with dark purple pansies or violets, white chrysanthemums with deep crimson ones, all are in violent contrast with each other, and although nothing is really bad in such combinations nothing is gained, unless it be the sharp contrast desired in large groups of potted plants indoors, or in certain distant effects in the garden.

There is something immeasurably injurious to artistic and refined color effects in the set beds so common on our green lawns. Nothing is prettier than a dainty daffodil fluttering in the breeze over a

little patch of pale blue violets. Yet there is something woefully artificial in the set parallelogram exactly shaped and filled with violets and daffodils exactly spaced.

Our great need to-day is an appreciation of the value of simplicity and perfect naturalness. When the simple truth of the utter poverty and worthlessness of artificiality is learned by artist and decorator, by florist and gardener, then we will see their respective arts grow greater, and not until then will we thoroughly enjoy the full meaning and beauty of color, which it is their great privilege to be associated with above every other calling or profession in life.

F. SCHUYLER MATHEWS.

New York Floral Notes.

The Havemeyer ball took place on the 2nd of the month, and Siebrecht & Wadley did the decoration. The Havemeyer house is a regular Parisian palace with an entrance through a large winter garden. This, of itself, is an immense hall all of marble. Here were five groups of tropical plants of geometric design, which started with maiden-hair fern at the base and then rose to the height of from fifteen to twenty feet. The larger plants were, of course, palms of different varieties. These were all arranged with blooming plants for this occasion. At the foot of the stairway was a large bank of Magna Charta roses in pots. They carried from five to seven open flowers, and there were fully two thousand open roses in the entire bank. At the top of this bank was a *Chamaerops humilis stricta* twenty-one feet in height, which looked very majestic placed in this group. About the bank were growing ivies upon which were festooned American Beauty roses in clusters of two and three. Connecting with this group was a winding wire fence five feet in height and 24 feet long, which was covered with growing ivies. The great conservatory, which is on the second floor, is the largest private one in the city. At the door of this conservatory there were two groups of growing *Lilium Harrisii* and *L. auratum*. About sixty plants were placed in each, and they were surmounted by large palms. Dozens of large Magna Charta roses were scattered in this conservatory, which is always a tropical garden, but for this occasion was garnished with blooming plants such as geranias of a large size, azaleas, and choice cypripis. There was a row of ivies, asparagus, and bloom of the *Bougainvillea spectabilis* stationed near this group of plants, and quantities of fine orchids were placed in the front portion of the conservatory with some beautiful nepenthes.

The ball room was decorated entirely in white on account of the young lady's name being Blanche, and this being her first evening in society. The decoration of the dining room was all of carved oak which was gilded. The corners of the room were filled with white camellias, and the plants used to alternate these with were *Lilium Harrisii*. The mantel-piece had on it a large banana basket four feet long filled with twelve hundred sprays of lily of the valley. This basket was trimmed with six yards of white satin ribbon. The thirteen windows in this ball room were treated with Roman garlands, which were wound around with white satin ribbon five inches in width. There were quantities of *Mermet* roses among these ribbon garlands. The dining room had thirty tables in it, on each of which was a basket of lily of the valley

and daisies. In the centre of this basket was a silver lamp which gave the light of the room. There were two large vases on each side of the entrance to the dining room, which were large specimens of the sixteenth century and very handsome. These were filled with one hundred American Beauty roses, and were greatly admired.

We have had some very handsome dinner decorations lately done by Mr. Hall of S. J. Burnham & Co., where he has had orchids and the sweetest centred myrtle.

Klunder has also done some fine decorating at Mrs. Sloan's, using *Gloire de Paris* roses, the first of the season, with fine effect, and La France roses, lilacs and lilies of the valley with great beauty. At the dinner on the fifth instant at Mrs. Astor's given to Miss Willing, was an enormous tray filled with roses, lilies of the valley and orchids, which was a superb piece.

Thorley made some fine bouquets for the Burrows' wedding. One bridal bunch contained three hundred sprays of lily of the valley, with a setting of five cactuses in one side. This was a great beauty. The bridesmaids all carried bunches of *Mermet* roses with lily of the valley at one side.

Violets have lately become the rage for wedding bouquets. A large bunch of white violets was made the other day for a fashionable wedding, and the bridesmaids all carried bunches of Neapolitan violets.

Some exquisite pieces have been made this month for funerals. It is now fashionable to place on the door bell of a house in mourning a cluster of *Smilax* which reaches to the ground, and then to put a quantity of rosebuds around the bell handle. The only mourning sign is a bunch of black ribbon. Hamit Bros. have made a cross of cattleya edged with violets, which was a beautiful piece. F. A. BENSON.

Tuberous Begonias.

I believe there is no plant that will grow in public favor for the next few years as will the tuberous begonia. We think now that it has about reached the height of par excellence, but there are many more crosses possible between the species, and there is no end of the variety of color, shape, style and leaf that can be produced by careful selection and hybridization.

It has all the elements of a popular plant, not requiring any particular skill to grow. We sow in flats, and in a short time it can be raised, and it is no trouble it, can be rapidly increased, especially by seed, therefore will be cheap and there is no need of a greenhouse to winter the plants in. The tubers can be taken up as soon as frost touches them and stored in any place that will keep a potato, they are sure to come out all sound in the spring.

The only rapid way of propagation is by seed. We sow in flats, two and a half inches deep, filled with coarse material in the bottom, with fine sifted soil on top, soak the soil by setting the flats in a tank of water or by watering with fine rose, but we find the soaking better. Sow the seed directly and sit a very light covering of very light material over them. We use leaf mould or rotted sphagnum. Cover with glass and paper, to keep dark, until the plants begin to appear, then remove the paper. Keep the glass on, but give air, which should be gradually increased until they are ready to prick off into other flats or pots filled with about the same soil as for seed, only not soaked. Water with fine rose after transplanting.

The past year we tried a plan that we like better than the paper and glass for

MR. MEECH'S HOUSE OF TUBEROUS BEGONIAS.

covering the boxes before the seed comes up. We sow as directed above and then take fresh long fibred sphagnum, place a covering of it directly on the seed (a close watch must be kept to remove this covering as soon as the seed begins to come up) then put the glass on and attend to air and shading from hot sun. Until the seed comes up we place the boxes where there is a moderate bottom heat, but as soon as they are well up, and in fact ever after, avoid all bottom heat and high temperature. The greatest trouble is from dampening off of young seedlings before transplanting, it seldom affects them afterwards.

They should be pricked out as soon as possible when they show signs of a second leaf; being too small to handle we pick them up on the point of a sharp stick dipped in water. Place them near the glass in temperature of 60° to 65°; shade from direct rays of the sun.

As soon as plants begin to crowd or touch they must be potted, or, if tubers are the chief object, transplant into flats and place in frames outside; keep close until they get a good start, harden by degrees, and then remove the sashes and no further attention will be required, only water, until frost cuts them down in the fall.

They can be planted directly into the soil in the beds, only we think we can cure the tubers better in flats by taking them in the greenhouse after frost and placing them around under the benches to dry off in the soil. We do not remove them from the flats until they are perfectly dry and the stems separate freely from the tubers. When taken green from the soil the skin is very tender and liable to get rubbed, which we find is an injury to the tuber; never rub the tubers, even when dry, they can be shaken clean of all dirt.

The propagation by cuttings is quite slow, as only the young shoots produced from the tuber, and sometimes a few side shoots, are produced from the lower portion of the main stem. Successive crops of cuttings weaken the tuber. Place the cuttings directly into two-inch pots filled with light soil, leaf mould, sand and light loam. As soon as rooted shift into larger pots. The tubers produced the first year are generally quite small, but it matters not, if no larger than a pea they will make fine plants the next year. The best plan is to winter the cuttings in the pots.

For growing under glass the tubers can be started in March, April or May. Start with a pot only a little larger than the tuber itself and shift on as fast as the roots fairly fill the pot, good plants can be grown in from 6 to 9-inch pots—of course they can be bloomed in any size pot (we have flowered them in 2-inch pots), but to produce specimen plants and flowers it will take pots at least as large as above stated.

For soil use good loam, made from well rotted sod, leaf mould and thoroughly rotted cow manure; if there is no sand in loam would add some. Pot rather firm, give plenty of water when in full growth and use the syringe until the flowers begin to appear. Do not try to start the tubers in bottom heat, let them start slowly or you will get too much top before you have roots to feed it, and then you may give up hope of a good specimen that season. Start slowly, give plenty of air when in full growth, without too much draught, plenty of light with shade from direct rays of the sun, temperature about 60°, in summer as low as possible by dampening the walks, and you are sure of success.

For planting out start in 3 or 4-inch pots and turn out as soon as weather will permit, same as other bedding plants.

The Englishmen say: "Fill your pots one-third full of broken crocks." In small pots we use nothing, in 5-inch and up simply place a piece of broken pot over the hole in bottom.

I will give a brief description of some of the best double varieties selected from our collection of over 200 varieties.

Alba fimbriata (Laing), pure white, finely fringed; *Alba rosea* (Laing), pink, white center; *Antoinette Guerin* (Crousse), white shaded cream, full flower; *Blanche Duval* (Arnault), creamy blush, guard petals rose; *Bouton d'Or* (Lemoine), golden yellow, dwarf plant; *Comtesse H. de Choissell*, fine salmon rose; *Clovis*, orange scarlet, branches freely; *Cloth of Gold* (Laing), clear yellow, dwarf; *Clemence Denisar*, rose, large flowers, increases rapidly; *Dinah Felix*, dark rose, feathered white, plant of full habit; *Dr. Masters* (Cannell), cream shaded blush, one of very best; *Dr. Franz Muller* (Van Houtte), rose shaded white, very large; *Felix Crousse* (Crousse), orange scarlet, large flowers; *Francis Buchner* (Crousse), cherry red; *G. Byersan*, salmon, fine habit; *Gabrielle Legros* (Crousse), sulphur white; *Glow* (Laing), bright scarlet, very best; *Gluck* (Van Houtte), brick red; *Goliath* (Lequin), shade crimson, large flowers; *H. Barnett* (Laing), dark crimson; *Ionia* (Laing), salmon scarlet, dark foliage, *Davisi* type; *John Poe* (Crousse), magenta rose, large and full; *King of Yellows* (Cannell), bright yellow, good for baskets; *Lafayette* (Lemoine), glowing scarlet, the most brilliant variety yet produced; *Lucy Closson* (Crousse), large white, fine shape; *Little Beauty* (Laing), pink, light center; *Lavoisier* (Lemoine), rose, very large; *Lord Loughborough* (Laing), bright scarlet, perfect; *Lord Randolph* (Laing), crimson scarlet, one of the best; *Louis d'Or* (Lemoine), yellow, dwarf, fine basket variety; *Louis Bouchet*

(Bouquet), brilliant orange scarlet, distinct, small flowers; Mrs. Plunkett (Cannell), soft salmon, one of the best; Mrs. Amy Adcock (Laing), salmon red, white center; Mad Arnoult (Arnoult), pink, deeper on edge; Prince of Battenburg (Van Houtte), rose tinted, yellow center, flowers largest size; Pavillon Janne (Crousse), straw yellow; Rosette (Malet), bluish edged rose; Renan (Lemoine), carmine rose, fringed flower, dwarf; Sultane (Lemoine), white, strong grower; Terre de Feu (Lemoine), dark pink, very large; Triumphant de Nancy (Crousse), clear straw yellow; Thalie (Lemoine), pure white, dwarf; Viole d'Or (Lemoine), yellow, dwarf; Wm. Bealby (Crousse), clear salmon, shell formed petals.

Perhaps I have extended this list too long, but when I look over the list and remember all the varied characteristics of the different varieties I am tempted to make it longer than shorter.

There is little danger of getting too varieties that are not distinct.

Charlevoix, Mich. F. J. MEECH.

View in Lincoln Park, Chicago.

We present herewith a pretty view in Lincoln Park, Chicago, with a fountain in the foreground, showing the luxuriant growth of the day lilies at the edge of the water, two handsome vases of plants at each side of the steps and beds of mixed plants, including hardy stuff which border the broad promenade in the back ground.

Winter Blooming Carnations.

[Extracts from paper read by Edwin Lonsdale before the Florists' Club of Philadelphia, December, 1890.]

I thank all the florists who have kindly answered questions, perhaps too freely asked, and who have forwarded flowers for examination and comparison. Many varieties sent represent new types, and others are improvements on old varieties.

Judging from the number of seedling carnations received within the past week or so new varieties will very soon be as plentiful as chrysanthemums.

Mr. John Thorpe says he will not be satisfied until the improved varieties will be as prominent among society people and flower lovers as any of the roses are to-day. Flowers shall be as large as the American Beauty rose, on erect stout stems, and their peculiar clove-like grateful fragrance will be more appreciated than ever. It would not surprise me if Mr. Thorpe has not something approaching the above even now. It is generally known that he has given us already Portia, E. G. Hill, May Queen, and several others.

Mr. Chas. T. Starr sent three of his recent productions. Golden Gate is a seedling from Hinz's White. Field of Gold is the pollen parent. It is a pure light yellow, and as I have seen this growing it can with confidence be recommended, as it is a robust grower and free bloomer. J. R. Freeman is the lightest colored crimson that I have seen; this is an advantage, as most of that class are considered too dark in color. It is also quite fragrant. It is a seedling from Anna Webb X Century. W. F. Drer is

the result of a cross between Buttercup and Century. It partakes of the color of the pollen parent; it is very large and deeply fringed.

From Mr. Charles A. Davis came a dark purple variety which has been named Ada. It is said to have the same parentage as J. R. Freeman (Anna Webb X Century). Note the difference; one is a crimson, the other a purple. Ada seems to be a very vigorous grower and it is a rich beautiful color.

Mr. Isaac Larkin sent Lady Rachel (Chester Pride X Crimson King), color purple; Morning Ray (Century X Scarlet King), in color it is similar to Century. Unfortunately these did not arrive in good condition.

From Mr. E. B. Jennings came four varieties: West End, dark pink; Mayflower, salmon pink, striped on a lighter ground; Snowbird, white, and Orange Blossom, which seems to be an improvement on Dawn. It is larger and not so formal in make up as the older Dawn.

From Mr. Lathrop Wight were received some fine blooms of Hector, a scarlet which, it is said, has been pronounced by an enthusiastic grower to be "the finest carnation in America." It certainly seems to be one of them. The Helen Galvin is similar in color to Grace Wilder, and if it should prove to be stronger in constitution than the older variety it will be an acquisition. Hesper is a yellow with faint stripes of red. Where Buttercup does well the newcomer seems to be its inferior, but as the old sort does not always give satisfaction in some localities, Hesper is worthy a trial.

Mr. Fred B. Lewis sent one of the most beautiful of the lot. It is named Nellie Lewis. It is said to be a sport from J. J. Harrison, which is an established favorite in many parts of the country. Nellie Lewis is a delicate pink striped with a darker shade. This of course makes it a striped variety, but it will be none the less valuable on that account, as en masse it is essentially a delicate pink.

In the report of the Baltimore chrysanthemum show mention was made of a carnation that was four inches across. I wrote Mr. H. Bauer, the exhibitor, for information, who sent the identical flower which was on exhibition for examination, and I regret to have to say that the variety appears to me to have no value whatever. The calyx bursts, and besides there is no form to the flower. It is nothing more nor less than a monstrosity. Since the paper was read Mr. Bauer has kindly sent a plant for trial. I hope I may be able to report more cheerful accounts later.

From Mr. L. Ussing a bunch of bright pink flowers came named Alexander. Judging from the flowers received it is a strong grower, though it is not very fragrant, and it has a slight tendency to burst the calyx.

Mr. S. S. Bain sent a few flowers of a white variety, very deeply fringed, but it was wilted so badly when received that very little could be determined about its size.

All the way from Illinois came a seedling in fair condition, much better than can be said of some flowers that came only a short distance. Too much care can not be taken in preparing flowers for shipping, whether for a customer or for examination. This variety came from John W. Kraft and was raised from a packet of seed bought from James Vick. It is a delicate pink in color, faintly striped with purple. This is an evidence that good varieties may be obtained through the seed stores.

Mr. H. R. Shelmire sent a bunch of fine flowers in which are found new types. Nellie Bly is heavily striped and deeply fringed. The petals are not numerous but they are inclined to be more flat than they are in the carnation flower in general. It is a seedling between E. G. Hill and Andalusia.

Edelweiss is a pure white sport from the striped Chester Pride. It appears to be a promising variety, it is of good size and fragrant.

Angelus is the result of a cross between Grace Wilder and Chester Pride. It is delicate pink in color, more of a salmon shade than is the pollen parent (Grace Wilder). It is a lovely color under gas light.

Dorothy claims the same parentage as the preceding, but it is darker in color.

Patti is a cross between William Swayne and Edelweiss (Chester Pride's offshoot). It has the markings of what might be called its grand parent, but the petals are rounded more and the flowers are altogether larger.

Mrs. Henry M. Stanley is said to be a sport from Century, and it is the most remarkable freak of nature that has ever come under my notice. Mr. Shelmire considers it to be his most valuable new variety. It seems identical with its parent excepting in color, which is orange slightly tipped with bright red. It is a very showy variety. But what makes it the more remarkable is that it is fragrant, whereas its sportive parent—Buttercup—is not. (Now eye scientists explain this phenomenon!)

Cesar has the same parentage as Nellie Bly. To me this seems to be the most valuable, on account of its stout erect stem. This is a characteristic which it behooves us to develop. It is of very little advantage to have a large flower unless the stem is strong enough to hold it upright.

No. 62 is very large—3½ inches in diameter—white striped pink. Its parentage is Lamhorn X Edelweiss.

From Mr. George Hancock came blooms of his Starlight, which is a pale yellow creamy white. J. B. Jaquier, a bright yellow, imported from France. Fair Rosamond seems to be of the Grace Wilder type with perhaps more of a dash of salmon in its coloring.

Mr. George Creighton sent some of his Fred Creighton. The flower is larger and of finer finish than I have ever seen in Grace Wilder, which it resembles in color, and from plants that I have seen growing it has a robust constitution. A flower of Peachblow Coronet was also received, which Mr. C. said had been on the plant eighteen days. It is after the style of Hinsdale in marking, but the flower is much larger and apparently superior to the older variety in every respect.

From Mr. J. G. Burrow was received a bunch of a brilliant crimson variety which has been named Miss Emily Louise Taplin. It is lighter in color than most other crimson varieties, and it is evidently a copious bloomer, but the individual flowers are not so large as the ideal.

Mr. Edward Swayne is apparently on the high road to success in the raising of new varieties. He has now seedlings of which he can give the pedigree two generations back. He has some promising varieties of the delicate pink sorts. One seedling was open for the first time a few days ago, which Mr. S. describes as resembling Lamhorn in form with the delicate pink coloring of Grace Wilder.

From Mr. Thorpe I have received some promising varieties since the paper was read, one resembling the rose Baroness

VIEW IN LINCOLN PARK, CHICAGO.

Rothschild in delicate coloring, struck me as being exquisite. It is under number at the present time. Another which he has named Mrs. Lonsdale promises to be valuable. It resembles May Queen in vigor and other general characteristics, but it is much lighter in color yet distinct from the Wilder type. It is also deliciously fragrant.

I have not had the pleasure of seeing Mr. Fred Dörner's seedlings which are about to be distributed by Messrs. E. G. Hill & Co., but from the notices they have received through the *FLORIST* from time to time they must be beauties. I hope and expect to see them next year. Nor have I seen Simmons & Co.'s Day-break. From the descriptions of it there ought to be pleasure in store both for the grower, retailer and customer. It must be similar in color to Miss Joliffe. I was told a short time ago that Miss Joliffe was one of Mons. Alegatiere's seedlings. It came to this country by way of one of the London nurserymen, and was generally distributed by the late lamented William Bennett.

One thing is quite certain, the interest in carnations and carnation culture was never so keen in this country as it is to-day.

On the evening that the paper was read I received from Mr. H. E. Chitty the best flowers, collectively, that were received at all; this was owing to superior packing. Of course the distance they had to come was of some assistance, but Mr. Chitty did all in his power to have the

flowers arrive in as perfect condition as possible, and he certainly succeeded in having them arrive in as good condition as any flowers could possibly arrive from the distance by express. There were six flowers of Lizzie McGowan which were certainly fine. Its pedigree is Hinze's White X Peter Henderson. Let the experimenter go to the same source and it is a thousand to one if another variety identical with Lizzie McGowan is produced.

Lamborn, Tidal Wave, Grace Wilder, Silver Spray and its speckled sport, not named yet, also Buttercup, Mrs. Carnegie, Anna Webb, Orient and Pride of Kennett were also received and among the crimson the last named variety is the favorite with Mr. Chitty.

A variety rather appropriately christened Freckled Fairy was shown to me a day or two ago, but I was admonished to "keep it dark," so no more on that subject for the time being.

Lamborn Versus Hinze's.

When I made out my statement last week in compliment to Messrs. Lombard and Nicholson, a statement which doubtless will cause those astute growers to hunt up their thinking caps, it was also my intention at the same time to have given a little attention to the Messrs. De Witt Bros., of Bristol, Pa.

These gentlemen after reading a letter of mine on the carnation Lamborn which

appeared in the *AMERICAN FLORIST* of January 8, seem to have become all at once so thoroughly intoxicated over the little joke that they thought they had at my expense, that they lost no time in conveying to the readers of the *FLORIST* in a flourish what wonderfully successful growers they were. Now, Messrs. De Witt permit me to take your own figures and statements and show you just how successful you are, and where the little joke does not come in. You say in your letter which was printed in the *FLORIST* of January 29, that you have an oldrattle trap of a house 25x100 feet in which is planted 3,100 carnations producing 25,000 carnation blooms in three months which sold at a fraction over two cents each, realizing in the aggregate between \$500 and \$600, a pretty good showing for \$18 worth of coal you say. Now, gentlemen, we will suppose that you realized the largest amount, \$600, and that \$18 worth of coal was all of that commodity used. Permit to ask, was that coal the only item of expense incurred in the production of that 25,000 carnations? Is the 2,500 square feet of land valueless? Can you employ labor for nothing? Is your own time and labor worthless? Think this matter over gentlemen and if you have neglected to keep an expense account I would advise you to begin at once and keep one, and I am thoroughly satisfied that you will find it necessary every time to deduct at the very least 50 per cent as the cost of production, which will cause the \$600 to

dwindle just one half, leaving you only \$300 as the net revenue of your 2,500 foot house for three months.

Now, gentlemen, my 3,500 little Lamborn plants which occupy the two side benches of my new iron house and part of a side bench in another house, cover a surface of just 301 feet, just one third the surface of your 25x100 house, and while your big house gave you 25,000 flowers which netted you \$300, my little Lamborns gave me 10,000 flowers which netted me \$500, which was a much larger product for the space occupied than the Hinz's White gave you. Now, Messrs. DeWitt, I presume by this time it has begun to dawn upon yourself and others just where the little joke really comes in, but for fuller particulars on this subject you are respectfully referred to the statement which I dedicated to Mr. Nicholson in a previous issue. I will, however, say in connection with this subject and as an important item of expense in all operations of this kind, that your 25x100 foot greenhouse occupies exactly what we here recognize as a city lot, which if it was where my greenhouses stand would be worth \$2,500, the interest on which at 6 per cent would be \$150, and a 2 1/2 per cent annual tax would be \$75 more, making the yearly expenses alone on that amount of land to me \$225. This Messrs. DeWitt Bros. would alone make a big hole in the gross earnings of a greenhouse of that size, and which with the many other large expenses too numerous to mention would bring a man out at the little end of the horn, if he was not something of a successful grower as well as the possessor of some common sense ideas in ordinary business management. Now gentlemen I do not claim to possess the above qualifications in any marked degree, but for a number of years I have endeavored to make a little over and above all expenses and I think unless a man does that he had better be out of business.

And I would here suggest to the Messrs. DeWitt that if they expect to ever build iron, steel, or plate glass greenhouses they will find the most rigid and careful business methods necessary, and if they are satisfied that they can obtain better results from Hinz's White than any other white carnation, I think it would be folly for them to abandon it. I have abandoned that variety and I think have given good and sufficient reasons for so doing, besides demonstrating beyond all possibility of doubt that in doing so I have derived some substantial pecuniary results, which might not obtain with others differently situated. I think I have also demonstrated that sometimes and under some circumstances it is a good idea to look before we leap especially when we might possibly jump into a bad trap or fetch up against a bad snag.

H. E. CHITTY.

Paterson, N. J., Feb. 12, 1891.

Prizes for Carnations.

In looking over the schedule of the Pennsylvania Horticultural Society for 1891, I noticed with much satisfaction that carnations have been accorded the recognition to which they are entitled.

In addition to the collection cut flowers not over twelve of a kind, first and second premiums are offered for 25 scarlet, pink, white, striped on yellow ground, striped on white ground, yellow and crimson, and any other color, respectively. First premium \$2, second \$1. These are steps in the right direction. These premiums are to be competed for

both at the spring show, which opens Tuesday March 17 next, and also at the chrysanthemum show, which opens Monday November 9.

A large display of carnations is expected and the competition is likely to be spirited, as it is open to all. It will not only be a battle between the growers but also the different varieties in each color. Distinct classes of the light and dark pink colors might have been made to advantage, I think, but that is not of very great importance, as the lighter shades are most popular nowadays, and they no doubt will be the most generally exhibited.

In addition to the premiums offered for cut flowers by the society, specials to be known as the "Wentworth Prizes," are presented for competition by Dr. Edward H. Williams. They are open to all and are as follows: \$25 for the three best seedling carnations in pots in bloom, in three varieties, never before shown; \$15 for the best twelve plants of carnations, in bloom, six varieties; \$10 for the best collection of cut blooms of carnations.

Rule 4 in the schedule says: "Seedling plants for competition, excepting chrysanthemums, must be exhibited on their original stocks." It seems to me that all classes of plants are entitled to the same consideration as chrysanthemums. I can not understand what the object of that rule can be. It has outlived its usefulness and should be abolished.

Dr. Williams' idea no doubt is to encourage the production of new varieties, and the first mentioned prize is offered for the best new carnations not in commerce.

The Nomenclature Committee will meet in session at the Queen Hotel, Toronto, at 9 A. M. the day before the S. A. F. convention takes place in that city next August.

Help Us.

The Executive Committee of the Society of American Florists have elected us a committee to look after the nomenclature of the plants dealt in by florists. These plants include not only roses, carnations, chrysanthemums and like popular classes, but also all manner of decorative plants, tender or hardy, that are included in florists' catalogues or used in indoor or outdoor or window gardening. We are required to see to it that these plants are

being bought and sold under their true names, and that no plant is being sold under a false name or under two different names.

Mistakes in the naming of plants are often accidental, for instance the labels may get changed in potting, moving or packing, but even misnaming in this way requires arrest, for the party who receives the misnamed plant, believing the name to be correct holds on to it and disseminates his stock under this name, thereby, though in perfect innocence of any wrongdoing, spreading a mistake and committing a breach of nomenclature. If this is your case or has been your case, or if you know of such a case, let us know, and we will try to mend it.

If you are growing two reputed varieties of plants under different names, but they seem to you to be identical, bring the matter to our attention, if we can we will aid you. A case in point: Carnation Portia and Carnation Brilliant although identical are grown and kept separate by some as if they were distinct varieties.

If you know of any instance in which a florist or other dealer misnames a plant intentionally for some selfish or mercenary motive, let us know that we may bring his sin to the knowledge of the world.

Please bear in mind that our mission is to help our brother florists all we can in preserving the proper names of decorative plants and flowers and in this line preventing imposition and fraud. And if you wish us to serve you faithfully and be of any benefit to you, please help us. How? By bringing to our notice any case of misnamed plants or the misnaming of plants under any circumstance that you know of.

Look upon us as your friends for it was to help you that we were elected to this work. If any one among you has in time past, done a little in rechristening plants, don't be scared, for there is balm in Gilead for every sinner that repenteth. But we be unto him who hardeneth his heart even if he be a member of the S. A. F.

MY COLLEAGUES.

Who are they? Read their names! Florists of America you have just cause to be proud that such a dozen men could be found to espouse your cause. They stand in the front ranks of floriculture in the world, and are perfectly familiar with the true nomenclature of the several classes of plants assigned to them but they do not often have direct means of knowing of the wrong names under which plants sometimes travel, for no sane man would send a misnamed plant to any one of them knowing it to be misnamed. It therefore devolves upon us their brother florists and the public at large to furnish them with the information about the wrongly named plants.

Any information you may have in this direction please communicate by mail to the chairman of any of the sub-committees, or, in fact, to any member you please of the committee, or to myself personally, it will be taken equally good care of. WILLIAM FALCONER, Chairman Nomenclature Committee.
Glen Cove, N. Y.

Floral Pillow.

Our illustration is from a photograph sent us by Mr. L. S. Swanson, Duluth, Minn. As Mr. Swanson says, the arrangement perhaps differs a little from that usually followed. The excellence of the engraving renders a detailed description unnecessary.

FLORAL PILLOW.

Boston.

Since Lent came in there has been a very noticeable decrease in the demand for cut flowers, but on account of unfavorable weather or from other causes the supply is somewhat limited, and there has been no glut or bad break in prices as yet. Roses have dropped in price about 25 per cent. Violets and carnations are a little lower, but everything else remains stationary. There are a good many nice Jacqs coming in now and they sell readily at from \$2 to \$5 per dozen, according to grade. There are not many hybrids in the market. Hybrids have not sold very well here for the past two or three years, the number demanded being very limited as compared with that in New York, Philadelphia and other cities. Odds and ends, so called, such as English primroses, *Primula obconica*, *corcepsis*, *tropaeolum*, *daphne* and the like, seem to be constantly in demand, but such sales count up slowly, and the dealers' minds revert regrettably to the time when big roses at big prices were all the rage. Regarding *Primula obconica* there appears to be a sharp division of opinion, some florists showing quantities of it constantly in their windows, while others would as soon harbor a rattlesnake as permit *Primula obconica* to cross their threshold.

Mr. David Allan has a new and distinct variety of *Dendrobium nobile* of which he is justly proud, and which he has christened *Robinsonianum* in honor of his friend Wm. Robinson, gardener to Mr. F. L. Ames. Specially noticeable in this dendrobium are the length and breadth of the sepal and petals, and the coloration permeates the whole flower making it distinct from *nobile nobiliss*, while in form it surpasses elegans.

The lecture at Horticultural Hall on Saturday February 21, by Mr. W. F. Ganong, instructor in botany at Harvard University, was listened to by a large audience. The subject was "The Geographical Distribution of Plants." As the lecturer stated at the outset the subject was botanical rather than horticultural, but was nevertheless very interesting. He said that the three important

limiting or controlling agencies in the distribution of plants over the surface of the globe have been heat, moisture and geological changes, and he showed by means of maps and charts how the various forms of vegetation, arctic, temperate and tropical, had been distributed each in its proper latitude or altitude. The three great distributing agencies he said were natural methods of dissemination, the agency of man and geological changes. Regarding the latter he showed how in the glacial period the arctic and northern temperate plants had been carried to and beyond the equator, and stated further that indications point to the probability that all the flora of the earth originated in the northern hemisphere. Speaking of the agency of man in the distribution of plants he said it had been but a small, and in general an unfavorable influence, man's most noticeable accomplishment having been the formation of barrens and the dissemination of useless weeds, and that the most of the troublesome and noxious weeds in the home of the richest flora of the earth, viz.: the eastern portion of North America had been introduced from Europe.

The president announced that the date of the annual spring exhibition had been changed to March 31 and April 1, 2 and 3.

On the exhibition tables were two handsome azaleas, some hybrid roses and cinerarias shown by Robt. Blair, gardener to Mr. A. W. Spencer. Mr. Jas. Comely exhibited three large baskets of fine camellias, and from the Bussey Institute came a nice collection of forced spring flowers, among which were blooms of three native cypripediums—*acalea*, *pubescens* and *spectabile*, also a pot of *Trailing Arbutus*.

W. J. S.

New York.

This week flowers of all kinds are very plentiful and business quiet owing partly to the very disagreeable weather. Prices have dropped considerably in consequence.

At the monthly meeting of the Florist Club held the evening of the 9th Mr. Wm. Falconer read his very interesting essay "A talk with florists." In the course of his essay Mr. Falconer dwelt upon the

importance of the careful training of young florists and said it was the duty of the masters to encourage learning and good feeling among their employees. Mr. Falconer exhibited 107 different species of conifers in illustration of his paper; these all classified and named, were spread on long tables and were extremely interesting to all present. He also exhibited some fine herbaceous blooms, among which was a most beautiful frass of the new canna "Star of 1891," which Mr. Falconer claims can be forced and is equal to any gladiolus. It is a beautiful copper shaded crimson (a color badly wanted in winter flowers), and an acquisition with great possibilities before it. Some fine blooms of *Streptosolen Jamesoni* caused much comment, as also the beautiful flowering shrub *Toxicophleba spectabilis*, which is very fragrant and easy to force. Mr. Falconer's essay was one of the most instructive ever read before a meeting of the club.

This season's flowers have never been equaled in quantity or quality; every one seemed to have gone in for some specialty with the result that he finds a ready market with finer flowers. But the greatness of our business and its future possibilities rest not alone with the grower and fine flowers. Very much depends on the retailer—the artist of the business. There is no customer who will not ask his or her florist for opinions on taste and ideas of construction, and he can do much to rightly direct the customer's fancies.

To educate the public and for the purpose of encouraging the greater use of flowers by showing them at their best advantage and proper uses the New York Florist Club has arranged an elaborate programme for their spring show April 7 to 11. Decorations adapted to all occasions will be shown and all who possibly can should avail themselves of the advantage of a visit. The growers promise that the cut flower display will be extensive; the collections of pinks, picotees and carnations will be an exhibition in themselves. Send on your seedlings for this occasion as it will be an important show for the carnation. We are also promised some surprises in roses. Many new varieties will be shown to the public for the first time.

There were many large dinners given as "wind ups" before Lent, and many beautiful decorations were made for them.

Bogert had the decorations for the Harlem Club's dinner. The table was handsomely decorated with choice spring flowers arranged in an Alpine design.

Herman Kuhn had a large decoration for a dinner at Mrs. Hilliards on 5th avenue. The center piece was a large basket of A. Farleyense and cattleyas with sprays of *Phalenopsis amabilis* and *Odontoglossum cristata*, between. Garlands of Laing roses were placed among the dishes. The favors were handsome bunches of lily of the valley.

Alex McConnell was very busy recently with the decorations for the annual dinner of the Lincoln Republican Club at Delmonico's. This was one of the largest dinners of the season and the twelve tables used were handsomely decorated with center pieces of American Beauties, side baskets of Mermets and garlands of freesia. Mr. McConnell has waving above his beautiful store on Fifth avenue a very handsome flag in embroidered flower designs.

LeMoult, who is one of the cleverest advertising florists, is doing a very large business at present. His large establishment on the Bowery is known to florists all over the states. Mr. LeMoult thought

nothing of carrying a stock of from 10,000 to 15,000 roses in addition to many thousands of other flowers. He was the introducer of the Cape flower here. McConnell and Grimshaw have had several large wedding decorations recently. In one case all spring flowers were used, another being very artistically arranged with American Beauties, Magna Chartas, lilac and La France roses.

"Weir of Brooklyn" is happy and busy. Mr. Weir has the reputation of being the greatest flower buyer in the world, often buying as many as 20,000 roses a day. Wagon loads of flowers may be seen daily crossing the bridge to his large stores on Fulton street, Brooklyn, and it's a wonder to the trade and he says to himself, how he disposes of the many thousands of flowers he buys daily.

The florists' window are all dressed in spring's garb. Many very pretty and unique designs are shown in spring flowers. A very beautiful design seen recently was a basket of Ma Capucine roses and chorisemas with copper colored silk and satin ribbons to match.

Thorley is making an unusually fine display in his windows; great masses of lily of the valley, jonquils and tulips over which hang great bunches of orchids. No one can pass this display without stopping to admire it. It is estimated that Mr. Thorley sold from 15,000 to 20,000 violets on St. Valentine's day.

Violet foil is a novelty used by florists here for violet bouquets and boutonnieres.

Duchess of Albany is losing favor to such an extent that it is believed the growers will throw it out next season. The La France as grown by Mr. Christy, Mr. Connolly and others, leaves but very little room for it.

Mr. Frank Moore is cutting some fine Cusin roses at present. He has made a specialty of this rose for several years.

Mr. E. Asmus' houses are a sight worth seeing just now. Many thousands of all kinds of bulbous flowers are coming in; these in addition to his model roses are worth many a day's travel to see.

Mr. May's Mermetts and Brides are very fine and it is expected that his roses will be a feature of the exhibition.

Acacia pubescens is a beautiful flower and worthy of cultivation. There seems to be a scarcity of *Coleogyne cristata* this season.

Fitcher & Manda's exhibition of orchids and ornamental plants at their nurseries, Short Hills, N. J., was visited by many society people and prominent gardeners.

Siebrecht & Wadley intend holding their annual flower show at the Madison Square Garden on March 3.

JOHN YOUNG.

News Notes.

TOLEDO, O.—Mrs. E. Suder and daughter have returned from Germany.

BALTIMORE.—Gilbert H. Patterson the Waverly florist has sold his place. He will go to Europe and remain in Scotland.

WATERLOO, N. Y.—D. S. Pierson has bought the stock of the old Burton stand and will conduct the business of florist as well as nurseryman.

CONNEERSVILLE, IND.—C. A. Riemann has started in the florist business here with about 5,000 square feet of glass. His address is 1224 Grand Ave. and he should be added to the directory as F.

LEWISTON, ME.—Fire and smoke damaged florist Scribner's greenhouse and

contents to the amount of about \$300, February 11. No insurance. Damage to sash and glass was quickly repaired.

SAN FRANCISCO.—The third annual flower show of the California State Floral Society will be held in this city May 6, 7 and 8. Copies of the premium list may now be had from the secretary.

LANSING, MICH.—Mr. John A. Beckbissinger, formerly gardener for a public institution at Ionia, Mich., has started into business as a gardener and florist here. He is located one-quarter of a mile west of the Michigan school for the blind.

CLEVELAND.—Mr. C. Fries some time since bought the Geo. Beebe nursery at Rocky River. This has 13½ acres. Last fall he built four greenhouses, each 111 feet long, heated by steam. He also purchased four 50-foot greenhouses and contents of C. T. Schuren, at Berea, and has moved the entire plant over to the Rocky River nursery. Mr. Schuren is now his manager.

OTTAWA, ONT.—The annual dinner of the Florists' and Gardeners' Club was held February 5 and it was a most enjoyable affair. About 50 were present to discuss the excellent menu. The table decorations were very attractive. The after-dinner speeches covered a wide range of subjects and all were entertaining and instructive. Instrumental music and songs being happily interspersed. The occasion will long be pleasantly remembered by those present.

TOLEDO.—Thomas Temple, a member of the firm of John Wilson & Co., the Superior street florists was drowned recently while yachting. He was washed overboard during a squall, while returning with a party of friends from a cruise to Detroit. His body has not yet been recovered. Mr. Temple was 35 years of age, was married and leaves a widow and two children. He was an enthusiastic floriculturist and was a very popular man.

In 1889 he was elected a member of the Board of Education and stood high in the estimation of his colleagues as one of the most active and intelligent members of the board. His untimely death is mourned by a wide circle of friends.

SITUATIONS, WANTS, FOR SALE

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash on accompanying order. Plant ads. not admitted under this head.

SITUATION WANTED—By a first class florist and gardener, married; best of references. Private place preferred. Address B. H. care Am. Florist.

SITUATION WANTED—By young man; good rose, carnation, grape and asparagus grower. Address J. W. care Jas. DeWolfe, 242 5th Ave. N. Y. City.

SITUATION WANTED—By gardener; single man, in charge of plant houses; experienced in rose and grape growing, has 11 years' experience. Address A. McW. Box 16, Elmira, N. Y.

SITUATION WANTED—By a first class German gardener and florist; middle age; 12 years' experience. Can furnish best of references. Private place preferred. Address Y. Z. care Am. Florist.

SITUATION WANTED—As gardener or manager; experienced in forcing fruits and vegetables, plants, shrubs, berries, etc., best of references. Furnishing private place preferred; age 40. Address D. care American Florist, Chicago.

SITUATION WANTED—As headgardener on private place, by Scotchman; married; aged 32; 12 years' experience in all greenhouse work. Strictly reliable. Best of references. Address THOMAS WALLIS, 712 George St., New Haven, Conn.

SITUATION WANTED—By young Scotchman; thorough knowledge of gardening in its different branches, and of all kinds of plants, shrubs, etc., private or commercial. Good references. Mention salary. Address Box 112, Great Neck, L. I., N. Y.

SITUATION WANTED—In Eastern Indiana or Western Ohio by a practical florist with a few and successful propagator and grower of general greenhouse stock. An competent and reliable of place. Address NIXON H. GAYO, Richmond, Ind.

SITUATION WANTED—By a first class florist, responsible position; 14 years' experience. Good rose and general grower of all greenhouse plants. General stock of greenhouse plants. References. Address FLORIST, 717 Page St., Toledo, Ohio.

SITUATION WANTED—By a German; married; 10 years' experience in general greenhouse work, experienced grower of palms, ferns and tropical plants. Northern States preferred. State particulars, etc. Address J. H. care Lake School, St. Lake School, Mich.

WANTED—An industrious young florist with good knowledge of general greenhouse work. Address Box 10, care American Florist, Chicago.

WANTED—An energetic, competent florist to grow general stock for commercial place and can handle them. Address Box 30, care Am. Florist.

WANTED—Bookkeeper and correspondent, one who can take care of all correspondence, etc. Give references. Lock box 1618, Philadelphia, Pa.

WANTED—Competent commercial florist; good knowledge of general greenhouse work. Must address with terms and references. Address E. W. WACHENDORF, Atlanta, Ga.

WANTED—An able working gardener, to take charge of general greenhouse work. Must have experience in growing all kinds as well as keeping records. Address HENRY A. DREKE, Philadelphia, Pa.

WANTED—A practical florist to grow roses, carnations, etc. Must be able to handle either married or single; state salary and references. Address G. A. KACHAM, 54 Grand Ave., Detroit, Mich.

WANTED—A practical gardener, thoroughly posted in all kinds of greenhouse work. Must be able to handle either married or single; state salary and references. Address G. A. KACHAM, 54 Grand Ave., Detroit, Mich.

WANTED—By middle of March, German, married man to take charge of cut flower department of commercial place. Must be able to handle either married or single; state salary and references. Address G. A. KACHAM, 54 Grand Ave., Detroit, Mich.

WANTED—A competent party to take charge of 11,000 feet under glass, in a town of 8,000 to 10,000 population. Must be able to handle either married or single; state salary and references. Address G. A. KACHAM, 54 Grand Ave., Detroit, Mich.

FOR SALE—Florist's store in a large city established seven years in good locality. Lease of business, reasons for selling explained on application. Address M. G. H. American Florist.

FOR SALE—Both of our retail flower stores, No. 50 W. Madison St. and 507 W. Madison St. (near Wagon Ave.) rent or write for particulars. Address FOREST GLEN FLORALS CO., 271 14th St., Chicago.

FOR SALE OR RENT—Two greenhouses with walls of general stuff new. Cheap. Lease of ground for 3 years. Will sell complete outfit including hoses, waxes, and tools. For full particulars address N. O. P. care American Florist.

FOR SALE—At a bargain, 400 feet of 4-inch pipe with joints, elbows and T's; 2 No. 1 Weathered heavy iron pipes, 10 feet long, and 10 feet of 4-inch material in a greenhouse 100x18. Address PAUL KROHN, 175 N. Clark street, Chicago.

FOR SALE—Five greenhouses, good shipping facilities, railroads leading in sixteen directions one of the best openings for a florist, capable man property free from all incumbrances. Some capital required, good security for balance. Address X. Y. Z. care American Florist, Chicago.

EXTRAORDINARY BUSINESS CHANCE FOR SALE OR RENT.

A splendid commercial greenhouse, comprising 30 houses, with 31,000 square feet of glass, well stocked, and 10 acres of ground in Chicago, 7½ miles from city business district. Every thing in place and convenient; good water supply and heating apparatus. Fine residence, ample grounds, and a fine house and storehouse on grounds. Owners have other business that require their entire attention. For full particulars address J. H. care Hamill, 297 30th Lake St., Chicago.

Florists Take Note FOR RENT.

A square of ground fronting on Market street, Philadelphia, Pa., 500x214, to Ludlow street. A very desirable location for a florist. Apply to

THE REAL ESTATE INVESTMENT CO., 731 Walnut St., Philadelphia, Pa.

Callicarpa Purpurea.

I was glad to see Mr. William Falconer calling attention to the merits of the *Callicarpa purpurea* in his "Notes from Canada," for it is truly a beautiful bush. I had never thought of it as a pot plant, but have often wondered why a shrub so ornamental as this is should be almost unknown in collections. One thing against it is its shabby appearance in early summer. With us it dies back nearly one half in winter, which gives it an uninviting look, unless pruned back when spring comes.

Another hardy plant of great beauty and attractiveness in early spring is *Azalea amena*. Quite small plants bloom, and little fellows in 3 and 4-inch pots generally find a ready sale. As many of your readers know, the flowers are of a rosy pink, the foliage quite small and evergreen.

I saw last summer some very pretty plants in pots of the *Spiraea Bumalda*, a rather new one. It is a dwarf grower, bearing rosy pink flowers, in flat heads. Unlike any other one, and much in its favor, it flowers all summer long, especially profuse if the decaying heads are cut off as fast as perceived. As Mr. Falconer says wholesale growers do not want these things, but those who do a local trade do, as attractive plants, such as these are, and which can be planted out after flowering, can be disposed of.

JOSEPH MEEHAN.

YOU CAN NOT afford to take any chances on your spring advertising. The only way to reach the WHOLE TRADE is through the AMERICAN FLORIST.

SEND YOUR adv. now for our special Easter number of 40 pages, March 19.

Our stock of this variety will all be handled at our own greenhouses so they may be in the best possible condition when they leave our place, on the same date as sent out from Boston—April 15. For this reason customers in OUR TERRITORY will be believe do well to secure their supply either directly from us or through jobbing agents using our stock. We will give names of such on application.

J. C. VAUGHAN, CHICAGO.

IMPORTED H. P. ROSES,

Worked low on the Manettia Stock, offer the best results in the florist, blooming freely and giving plenty of cuttings for propagating quickly. Fine plants for sale by the 100 or 1000, at low rates.

Price Lists to applicants. Address

WILLIAM H. SPOONER,
JAMAICA PLAIN, (Boston), MASS.

THE NEW ROSE

WABAN

This very valuable rose originated at the Waban Conservatories of E. M. Wood & Co., Natick, Mass. It is a *SPORT* from Catherine Mermet and identical with that variety in every characteristic, excepting color, which is a rich, deep, **BRIGHT PINK**; it sustains the same relation to its parent as Duchess of Albany does to LaFrance. The only objection to C. Mermet is its frequently pale, insipid color in cloudy weather; experience has shown that the **WABAN** retains its deep rich color in all kinds of weather; it will, without doubt, prove to be as valuable as **THE BRIDE** which is also a sport from the same magnificent variety.

IT HAS ALREADY RECEIVED THE SILVER MEDAL

of the Massachusetts Horticultural Society; of the Pennsylvania Horticultural Society, and **Certificate of Merit** from each of the Societies in this country and Canada where it has been shown,

Ready for Distribution on April 15th, 1891.

Orders booked now, will be filled in strict rotation.

Extra good plants from 2½-inch pots.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Monday to secure insertion in the issue for the following Thursday.

Address THE AMERICAN FLORIST CO., Chicago.

A PHOTOGRAPH of their house of Hinze's White carnations has been sent us by Messrs. DeWitt Bros., Bristol, Pa. The house is a wide one with four benches, two narrow ones at the sides and two wider ones in the center with a walk between them. The plants are in splendid bloom and covered with buds. The house is evidently the one referred to by the Messrs. DeWitt in their communication in a previous issue, and the crop of flowers is there all right. They also send us a box containing several large bunches of blooms of several sorts, all on very long stems. The blooms are of fair quality, the Hinze's being of good size, but the Wilders and others are rather small, though the stems of all were of extra length. Though not extra they may be called good average blooms.

AS A SAMPLE of the prodigality of florists a subscriber sends us a telegram received by him. It is an order for cut flowers and contains over fifty words, fully half of which were unnecessary and confusing, and the whole could have been far more intelligently given in less than ten words by the use of the S. A. F. code. Our correspondent says: "Money seems to be no object to some florists," and as the sense is so obscure in spite of the number of words used, he aptly names it a "Cipher telegram."

THE S. A. F. Committee on Nomenclature as reorganized is given in another column. It is certainly an able committee and will do effective work if the needed assistance is given by those interested and every plant grower is interested. If every reader of the FLORIST will do his share by reporting to the committee all cases of misnaming, either intentional or accidental, that he may know of, the work for which the committee was appointed will go rapidly forward.

A COPY of the American edition of *Lindenia* for February 1891 has been received from the publisher, Mr. Lucien Linden, Brussels, Belgium. It contains beautifully executed colored plates of *Cattleya* Rex, *Cochlidora* Noeziana, *Peristeria* aspersa and *Cattleya* Warocqueana var. *amethystina*. The text is in English. The American edition of this elegant publication will be gladly welcomed by all lovers of orchids.

WE HAVE received two remittances of one dollar each in which the senders have neglected to give any information as to their identity or whereabouts. One—a postal note—is from Grand Rapids, Mich., and the other a dollar bill enclosed with one of our subscription blanks not filled out. The post mark on the envelope is indecipherable. Will the senders please supply names and addresses?

THOSE WHO HAVE either A. J. Binley or A. J. Bailey on their catalogue lists at Albany, N. Y., should erase them and save their catalogues. A. J. Binley, Glens Falls, N. Y., is correct.

CIRCULATE your spring trade lists in our EASTER NUMBER, to be issued March 19 and to contain forty pages. That number will be a beauty.

Coming Exhibitions.

November 10-13, Philadelphia.—Chrysanthemum show Penna. Hort. Society.

Philadelphia.

A short round among the growers shows an abundant stock of Easter stuff. Easter is of course the event of the season and is becoming more generally celebrated each succeeding year. It certainly gives an impetus to every branch of the business and may be truly called the florists' harvest time.

W. K. Harris has a very large stock of hydrangeas. He does this plant very well, they look very promising, being short, bushy plants and full of buds just showing. The genista is also a favorite, and plants of this beautiful Easter flower are to be seen in all sizes and conditions of bloom. Of course the lily forms a large portion of the stock and they are seen in all stages of growth; they are mostly from Bermuda-grown bulbs. The lily disease has made its appearance among them and this will carry off quite a few; the stock generally, however, looks very fine and will make a great show when in flower.

Mr. Harris has probably the largest stock of *Ficus elastica* variegata in this country. He has been working it up for two or three years past and will soon be able to supply the demand which this beautiful plant will create. It seems to grow quite as freely as the common ficus and will be a welcome addition to the stock of variegated foliage plants. He has also a fine stock of the common ficus.

J. W. Colflesh has a fine general assortment of Easter plants. Among the rest we notice some nice plants of the yellow English primrose, a rare plant in this market.

George Anderson has a fine lot of hydrangeas coming on. His specialty is the roses for cut flowers, and hydrangeas are the only plants he handles except possibly

young roses. He has a fine house of Brunners and Laings that will be in about the second week in March and two others that will come later.

Robt. Craig's stock is very fine. His place is worth traveling miles to see the week before Easter. His lilies are very fine; he says the best he has ever had and they certainly do look well. Two large houses are filled with them, one all Harris and the other longiflorum. They are all short and stocky with an abundance of broad glossy leaves and run from four to eight buds to a plant. In another house is a nice batch of rhododendrons, while azaleas have a house to themselves and will be very fine. We notice a lot of ixias or Cape bulbs, ten or a dozen in a 6-inch pot; these are new about here and will be quite a novelty as they make a beautiful show when in flower.

Pot roses will be very fine and in great variety. Mr. Craig makes a specialty of pot roses and his rose houses at Easter are a show of themselves. We noticed some fine plants of *Pteris nobilis*; this promises to be the pteris, and is certainly the prettiest fern of its class.

Jacob Becker has a fine stock of Easter stuff. Last season he rented an empty store in the center of the city and retailed most of his stock. We believe the venture proved quite successful and the store was kept stocked until planting out time.

For the past week business has been dull if we except the demand caused by the Astor-Willing wedding. The papers of the day were unanimous in their opinions as to the price of the decorations which were put down at \$20,000, but \$2,000 would be about right. A great deal of smilax and asparagus was used, as were also orchids and hybrid roses.

Flowers of all kinds are very plentiful, the unusual warm weather having forced the buds in far in excess of the demand.

P.

The Willing-Astor wedding made business quite lively early in the week. More flowers were used on that occasion than has been done at a similar ceremony for a very long time. Orchids and fine roses were used in profusion. Pennock Bros. who had the matter in hand had to work nearly all one night in order to have every thing ready on time.

Trade is getting somewhat flat just now. It is to be hoped that since some of the society people have dared to break through the old tradition of not getting married during the Lenten season others will follow suit and break up the old notion.

There are some well grown plants of *Erica Wilmoreana* in some of the florists' windows. They are very beautiful. They are not grown in or near this city. I am informed they come from some place on Long Island.

I saw a house full of Snowdon carnations the other day and they were well set with buds and we were assured that this old "stand-by," as one of the proprietors affectionately termed it, had been flowering freely all winter. The flowers, however, were rather small. Hinze's White, it is said, does not do well here. Some Tidal Wave carnations growing here were pronounced Century, but they are not, they are the true Tidal Wave. And it is just here where this confusion sometimes comes in, the lack of discriminative powers in the individuals who are growing the different varieties. I have no doubt it will surprise practical carnation growers to learn that one of the varieties above referred to should be taken for the other.

The Seed Trade.

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president; JOHN FOTTLER, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1891.

James H. Munson.

TO THE AMERICAN FLORIST:—The Chicago Times of the 16th of January last states: "James H. Munson was found dead in his room yesterday morning, etc., etc., the verdict of the jury was the cause of his death was heart disease."

Mr. Munson was well and favorably known in the seed trade for some years, first with Hiram Sibley & Co., Rochester and Chicago, later with Joseph Breck & Sons, Boston. He was a merry, good-natured, kind hearted man; smart, quick to see and comprehend, always on the alert, wide awake, witty, always ready with a joke or a kind word, or to help any one who called for his assistance. He was a business man of great ability, his executive skill as shown in the management of a large and complicated seed business was well known. But he will be chiefly remembered for his good fellowship with all he came in contact, both in a business way and socially.

Amongst his fellow workers especially, his memory will be lovingly cherished, for he had the rare gift of being able to enlist the best efforts of those under him by kindness, no harsh words were ever used by him, he ruled by kindness alone. His early death is rendered more sad by the fact that the cloud of misfortune, which darkened his career for a short time, seemed in a fair way to be dispelled.

Lately he was engaged in a position of trust in Chicago, was reported to be doing well and likely to come to the front again. But it was ruled otherwise, and so passes another of the lights of the seed trade. The list has been heavy the past few years; Peter Henderson, Hiram Sibley, John Briggs, Isaac Young, James Reid, Sidney Wilkinson, Munson, Rudell, Isaac Vanderbilt and others. M—

Mr. Wm. C. COMSTOCK the Veteran seedsman of East Hartford, Conn., now in his 81st year, had the misfortune to break his leg recently. He is healthy and full of pluck, doing well and all hope will soon be out again. Mr. C. commenced to grow seeds near Hartford 55 years ago, and probably knows more to-day about seeds and vegetables than any other man in America. He was the founder of the house of Comstock, Ferre & Co.

Mr. F. BENARY expects to visit America in April.

MARCH 19 we shall issue a 40-page number, which will be most beautifully illustrated and will contain a number of special features which will make it of unusual value.

BULBS NOW READY FOR DELIVERY.

THE BEST IN THE WORLD FOR FORCING FOR WINTER FLOWERS. WE OFFER ONLY STRONG FIELD-GROWN BULBS FROM OUR OWN GROUNDS IN BERMUDA.

COPYRIGHTED, 1890, BY F. R. PIERSON, TARRYTOWN, N. Y.

From a photograph taken the week before Easter, 1890, showing a view in one of our new iron greenhouses, here at Tarrytown, 20 feet in width by 120 in length, of a crop of Liliium Harrisii in full bloom. This house produced over 15,000 flowers for Easter.

This is not only the best by far of all lilies for winter blooming, but it is one of the most profitable flowers that can be grown by florists. It is very easily handled, and the flowers being especially effective for decorative purposes, always command large prices. From its name some have thought it was a bulb for florists' use for forcing for the Easter market only. This is not exclusively so; it derives its name from the fact that, in Bermuda, grown in the open ground, it blooms at Easter time—hence the name "Bermuda Easter Lily"—but by growing it in this country in the greenhouse, with successive lots, it can be had in bloom all the winter from early in December until after Easter; in fact, by special culture, all the year round, or as long as cut flowers are in demand. The fact that it can be forced into bloom by the Christmas holidays adds particularly to its value, as it fills in at a time when flowers are usually scarce and in great demand at high prices, but to accomplish this the bulb must be potted early in August, something depending upon after treatment and the temperature the bulbs are grown in.

For this purpose our Bermuda-grown bulbs are indispensable, as in Bermuda the bulb reaches its highest development, and ripens off perfectly, and is ready for shipment usually by the middle of July—before bulbs in our own country have hardly begun to make their growth. Our bulbs being grown in the open ground, in a climate naturally adapted for their perfect growth, are particularly strong and healthy at any time.

The extent to which this Lily is being forced for winter flowers will be shown by a sale made by us to a large New York grower, who purchased 30,000 bulbs for his two uses. We hear it said occasionally that Liliium Harrisii flowers will not keep—this is owing to improper handling. If cut as soon as open they can be kept for more than two weeks, if in a proper place. It bears shipping splendidly, as the two following letters will show. These were written acknowledging the receipt of flowers shipped last Easter.

J. L. Russell, Denver, Colo., writes: "The Lilies came in excellent shape. I don't think I lost one; it is a pretty good recommendation for your packing." The Fort Worth Nursery Seed and Canning Co., Dallas, Texas, writes: "The Lilies arrived in perfect condition, and we must compliment you on your packing. We would not have thought they would have carried so far packed dry."

THIS VALUABLE LILY IS OUR SPECIALTY.

We grow the bulbs by the acre on our own grounds in Bermuda. We were the first to grow it in large quantities and to offer it at reasonable prices, and we have always been recognized by the trade as HEADQUARTERS FOR THE BERMUDA EASTER LILY; supplying the trade as we do, both in this country and in Europe, and we hold by far the largest and the controlling stock of the genuine variety in the market.

The extent of our operations in this bulb alone will be best understood when we state that we expect to sell from OUR CROP of 1890, over

— HALF A MILLION BULBS. —

Be sure you get the genuine Liliium Harrisii. In order to secure "the true variety," purchase your Bulbs from original stock, which is known to be pure. The value of this Lily has led unscrupulous or ignorant parties to plant L. Longiflorum in Bermuda, planting it with Harrisii to increase their stock rapidly when Harrisii was very scarce, thus mixing the stock irretrievably, thereby rendering it absolutely valueless for forcing, and we have known instances where these mixed bulbs have been sold to large growers as the genuine variety, where large loss has resulted, and dealers should look with suspicion on bulbs offered at prices less than market rates, as the supply has never yet met the demand. "Mixed Bulbs" only being offered at reduced rates.

Large growers or dealers in this bulb should write us for special prices, stating quantity of bulbs desired, and we will give lowest estimate on the same by return mail.

F. R. PIERSON & CO., TARRYTOWN, NEW YORK, U. S. A.

OUR FREESIA BULBS ARE NOW READY FOR DELIVERY. They are of unusually fine quality, nearly twice the size of Bulbs usually sent out. Intending purchasers should write us for samples and prices, stating quantity wanted.

Misrepresentation of Goods.

I had a little deal in smilax a few days ago which I would like to have ventilated and ask other members of the craft who are similarly situated what is, or was, the right thing to do under the circumstances.

The case is this: During the latter part of January I received a letter from a grower in the southern part of the state who said that he had "about 200 extra good smilax," and wanted to know if I knew of a market in Cleveland for the same. In about a week or so I needed smilax, sent a telegram for 40 extra strings and I received in return 40 of the poorest, shimmest strings I ever saw in my life, most of them not over three or four feet long, and some not a yard in length. It would take five of some of them to make one good string. They were sent C. O. D. with charges for collection added. I was extremely busy at the time, and though I used the smilax I had to buy as much more to help out the decoration. The smilax received was also very green and young and wilted almost as soon as exposed to the air. I was away from the store when the goods arrived, otherwise should have refused them when opened.

Now what I want to get at is: What ought to be done in cases of this character? It certainly is misrepresentation of goods. We all understand that there are times in the cut flower trade when the weather is bad and roses and carnations are not up to grade, but it seems to me this does not apply to smilax. This was a small deal, but we use it as an example. In cases of this character what is the proper thing to do? E. G. CAMPBELL, Cleveland, O.

DAISY SNOWFLAKE

Daisy Snowflake—This Daisy, if treated like
Violets, will give splendid returns for all labor be-
stowed upon it. I grow it by the thousands and can-
not supply the demand for cut flowers, as it keeps
fresh 3 to 4 weeks after being cut and then looks
as fresh as other white flowers just cut. The
flowers are borne on stout long stems, fine white and
beautifully quilted, and average as large as a decent
piece; a great acquisition to florists.

See what F. J. KELLER says about this Daisy:

ROCHESTER, Jan. 28th,

Daisy Snowflake is quite a useful flower both for
floral designs and put in with cut flowers, and
when tied up in small bunches they sell very rapidly
with us for funeral designs. We use a great many
in place of carnations as it is cheaper and covers
almost the same space, and keeps fresh some durable
longer. Be sure and send me every Daisy you can
cut, as I cannot get them fast enough for my cus-
tomers. They say it is the best cut flower yet
because it keeps fresh for 3 to 4 weeks. I feel I can-
not say too much in favor of this useful flower.

Yours truly, F. J. KELLER.

IMPORTANT TO ALL FLORISTS.

Our new trade list of 50 pages and our descriptive catalogue of 100 pages is
now being mailed to you. Should you not receive a copy within a few days,
notify us and we will send you one.

Without any desire to brag we assure you we have the largest and best col-
lection of Chrysanthemums in the country.

All stock is bloomed before propagated from. Our list contains over 600
varieties. We also publish a list of synonyms in our catalog.

Pamphlet of "Summer Flowering Bulbs" 20 pages mailed on application.
Price \$5 per 100. Our name does not appear in the pamphlet, therefore it is
highly valuable for those having a counter trade. Our list of dormant bulbs
is the largest and finest of any in the country.

We have so much of interest to florists and others in our catalog that we
cannot begin to mention any.

Blanche Ferry Sweet Pea, proved of great value last year as a cut flower.
We have a large stock of fresh seed at 10 cents per oz.; \$1.00 per lb.

You will bear in mind we told you last year that Chrysanthemum V. H.
Hallock was a good one. You will hear from this later on. We also recom-
mended Charity and White Cap on our last years set as being particularly
valuable for florists' use. Prices in quantity on application.

Fine Phalenopsis.

Under this heading a correspondent in your issue of the 5th inst. mentions some specimens of these orchids he had seen. I am not particularly conversant with orchids and don't know whether the following story is likely to beat the record or not, and shall be quite content to consider myself extinguished if some one else can cup what I describe with a bigger one.

A Phalenopsis Schilleriana with a spike 4 feet, 5 inches long, 3 feet, 11 inches wide bearing 129 flowers; the plant having five leaves, the longest of which measures 21 inches from butt to tip, is in an ordinary orchid pot with holes in the sides. It has been cared for among other orchids for the last two years or so by Mr. Joseph Spring, gardener to John Hoskins, Esq., Q. C. Rosedale, Toronto, and is now in its prime. The same plant last year had a spike with 64 flowers on, (in referring to Nicholson's Dictionary of Gardening I see this: "Peduncle frequently 3 feet in length, branched, occasionally bearing nearly 100 blossoms." E.

When writing to advertisers please mention the fact that you were induced to write by the advertisement in the AMERICAN FLORIST. You will benefit us by letting advertisers know that it is the FLORIST that is bringing them trade.

TRADE LISTS published in the AMERICAN FLORIST are bound in with the paper and are of permanent value. Of those which reach the trade otherwise many go into the wastebasket, and some into an obscure pigeon-hole. Which way are you going to circulate your trade list?

FRED CREIGHTON.

ROOTED CUTTINGS of this Superb Pink Carnation, \$1.00 per hundred; \$30.00 per thousand. From the original stock, which has not been forced or in any way made to produce an extra quantity of **CHEAP** Cuttings at the expense of the future well doing of the same.

To give all a chance to see what kind of flowers this stock produces, I will send a few florets, free of charge, to any in the trade who apply to me by letter.

GEORGE CREIGHTON, NEW HAMBURG, N. Y.

Chicago.

Mr. J. F. Kluemper has secured land near Waldheim Cemetery in Oak Park and will commence the erection of four greenhouses at once.

Mr. T. H. Spaulding of Orange, N. J. was in the city last Thursday. Frank Holly & Son have opened a floral store at 531 West 18th St., near Blue Island Ave.

The Hort. Dept. of the W. F. is still unorganized, and from present appearances nothing will be done for another month.

While the volume of trade has fallen off some from last week it is still remarkably large for the season. The demand is sufficient to use up all the good flowers sent in, and the call for roses exceeds the supply. Taken all in all the Lenten season has so far been an unusually satisfactory one to the florist.

If you have anything to sell to florists don't fail to advertise it in our special Easter number of forty pages, elegantly illustrated, and with a number of other special features. No increase in advertising rates.

MY NEW SPECIAL OFFER OF
EXTRA CHOICE FLOWER SEEDS

is now published and may be had on application.
FRED. ROEMER,
SEED GROWER
Quedlinburg, Germany.

Begonias! Begonias! Begonias!

I was one of the first in England to handle Begonias, and for some years immense quantities passed through my packing sheds annually, and I was very sorry to be compelled to relinquish their cultivation; **HARDY PLANTS** then demanded all my attention, and these were first, but I have always "kept touch" with the Begonias, as I made up my mind to "pick them up" at the first opportunity. For some time past I have been assiduously working the **BEGONIA**, I have also been gathering from every known source everything considered superior, and I trust ere long to make my collection second to none. I purpose making

BEGONIAS A GREAT SPECIALTY AT TOTTENHAM.

My knowledge of this family is wide and the facilities for knowing every collection, both private and public, in England and the Continent, has enabled me to secure everything that I consider of great value, especially those possessing **NEW POINTS OF MERIT**, as my aim will be to **WONDERFULLY IMPROVE THE BEGONIA**. I am convinced that but few people can have yet any conception of the capabilities of the plant. I have an **IMMENSE STOCK OF SINGLES AND DOUBLES**, all carefully graded last season, containing every shade of color an I those which yield flowers of the largest size combined with perfection of form and improvement of type. In the hope of further developing this attractive flowering plant, I shall plant some hundreds of thousands for next season's show, and I shall be very pleased to exhibit them to any of my friends, who, I am sure, will be surprised at both quality and quantity. **SPECIAL PRICES** for Tubers for present delivery on application.

DAFFODILS AND NARCISSEUS.

I shall have an enormous quantity of these to offer for **Fall Delivery**. Special prices on application as the season advances.

THOMAS S. WARE,

HALE FARM NURSERIES.

TOTTENHAM, LONDON, ENGLAND.

THE CHEAPEST AND BEST OF ALL.

FIR-TREE OIL

INSECTIGIDE—soluble.

FOR PLANTS.—To make a solution for washing or cleansing purposes—Half a Pint of Fir-Tree Oil to ten gallons of water.

For Green and Black Fly, Thrip, American Blight, Woolly Aphis, etc.—Half a pint of the Fir-Tree Oil to two or four gallons of water, or two or three table-spoonfuls to the pint.

For Red Spider and Caterpillar—Half a pint of the Fir-Tree Oil to two gallons of water, or three table-spoonfuls to the pint.

For Mealy Bug, Brown or White Scale—Half a Pint of the Fir-Tree Oil to four or six quarts of water, four to eight table-spoonfuls to the pint.

For Mildew and Blight on Fruit or Foliage—Half a Pint of the Fir-Tree Oil to a gallon of water, or six table-spoonfuls to the pint.

Used with warm water it is quicker in its action than cold is used.

Soft or rain water is necessary, and Applied in Wood, Tin or Pot Vessels.—Galvanized Iron Vessels must not be used.

FOR ANIMALS.—For Skin Diseases and Killing Vermin mix one part of Fir-Tree Oil with three parts of warm water and wet the affected part each day. In some cases it may be used stronger. For Ring-worm apply full strength with a brush each day.

FOR BIRDS INFECTED WITH PARASITES.—Put a table-spoonful of Fir-Tree Oil in one quart of warm water and dip the bird in it, taking care that its eyes are protected, hold the bird in one hand for one minute, then dip into clean tepid water; this may be repeated. If necessary a much weaker solution may be used with a spray producer.

Sold in Bottles and Tins.

Manufacturer—E. GRIFFITHS HUGHES,

MANCHESTER, ENGLAND.

SOLD BY ALL SEEDSMEN.

THE RURAL PUBLISHERY BOOK

A Complete Hand-Book of Propagation and Pollination. By L. H. BAILEY, Editor of the American Gardener.

This valuable little manual has been compiled at great pains. The author has had unusual facilities for its preparation, having been aided by many experts in many directions. The book is absolutely devoid of theory and speculation. It has nothing to do with plant physiology, nor with any abstruse reasons of plant growth. It simply tells plainly and briefly what every one who sows a seed, makes a cutting, sets a graft, or crosses a flower wants to know. It is entirely new and original in method and matter. The cuts number almost 100 and are made especially for it, direct from nature. The book treats of all kinds of cultivated plants, fruits, vegetables, greenhouse plants, hardy herbs, ornamental trees and shrubs, forest trees.

Among the contents are the following:

PROPAGATION BY SEED.

PROPAGATION BY SEPARATION.

PROPAGATION BY LAYERS.

PROPAGATION BY POLLINATION.

PROPAGATION BY CUTTINGS.

PROPAGATION BY GRAFTING. Including Grafting,

Budding, Inarching, etc.

The **NEWSPER** List is an alphabetical list of all kinds of plants, with a short statement telling which of the operations described in the first five chapters are employed in propagating them. Over 2,000 Entries are made in the list. The following entries will give an idea of the method:

ACEE (MAPLE). *Sapindaceae*. Stocks are grown from stratified seeds, which should be sown an inch or two deep; or some species, as *A. dasycarpum*, come readily if seeds are simply sown as soon as ripe. Some cultural varieties are layered, but better plants are obtained by grafting. Varieties of native species are worked upon common or native stocks. The Japanese sorts are winter worked up in imported *A. polymorphum* stocks, either by whip or veneer-grafting. Maples can also be budded in summer, and they grow readily from cuttings of both ripe and softwood.

PHYLOCACTUS, PHYLOCACTUS, DISOCACTUS (LEAF CACTUS) *Cactaceae*. Fresh seeds grow readily. Sow in rather sandy soil, which is well drained, and apply water as for common seeds. When the seedlings appear, remove to a light position. Cuttings from mature shoots, three to six inches in length, root readily in sharp sand. Give a temperature of about 60°, and apply only sufficient water to keep from flagging. If the cuttings are very juicy, they may be laid on dry sand for several days before planting.

GOOSEBERRY. Seeds, for the raising of new varieties should be sown as soon as well cured, in loamy or sandy soil, or they may be stratified and sown together with the sand in the spring. Cuttings, 5 to 8 inches long, of the mature wood, inserted two-thirds their length, usually grow readily, especially if taken in August or September and stored during winter. Stronger plants are usually obtained by layers, and the English varieties are nearly always layered in this country. Mound-layering is usually employed, the English varieties being allowed to remain in layerage two years, but the American varieties only one (Fig. 27). Layered plants are usually set in nursery rows for a year or two before planting from the stools. Green-layering during summer is sometimes practiced for new or rare varieties.

Price, in library style, cloth, wide margins. \$1; Pocket style, paper, narrow margins, 50 cts.

SPRAY YOUR FRUIT TREES AND VINES
Worms, Fruit and Leaf Blight of Apples, Pears, Cherries, EXCELSIOR SPRAYING GRAPE and Potato Root, Plum Curculionid prevented by using
PERFECT FRUIT ALWAYS SELLS AT GOOD PRICES. Catalogue showing all injurious insects to fruits mailed free. Large stock of Fruit Trees, Vines, and Berry Plants at Bottom Prices. Address W.M. STAHILL, Quincy, Ills.

Comes in Sevens.

An Erie, Pa., reader sends us a small printed circular describing the merits of the "Seven wonders, or vining lily." The document informs us that it is "Nature's greatest curiosity" and that "It is the only plant in the world that will grow a vine seven feet long with seven branches, each branch bearing seven fragrant flowers—in all, 49 large variegated flowers—blooming for a period of 21 months, and all from a little jar of water." Our correspondent asks if we know anything about this "seven wonders," and states that a street fakir is selling the seeds in Erie about as fast as he can pass them out. He also encloses a drawing of the horned seeds.

This is an old trick of the street fakir and it is curious how many gullible people they find to bite at their bait.

Regarding these seeds Mr. Wm. Falconer has at our request prepared the following: "These 'Chinese lily seed' are a species of trapa, of which two abound in Asia, namely, *Trapa bispinosa* of India and Ceylon, and whose fruit is two horned and generally known as Singharas nuts, and *Trapa bicornis*, also two horned and known as the ling of the Chinese. Probably it is the bull's head-like ling the Erie fakir deals in. Both the Singharas nuts and the Chinese ling are very important articles of food and commerce in their native countries. The Water Chestnut, *Trapa natans*, a native of southern Europe into Asia, has four smaller horns, and is a commonly grown aquatic in this country. Annual and easily raised from seed. They take root in the ground in moderately shallow to middling deep water and send out long-jointed stems that have a large tuft of roots at every joint, and at the end a rosette of leaves with short inflated stalks which serve to float them on the water, and the stems often branch out enough to mass the surface of the water with the floating bunches of leaves. The flowers are small, white and closely set among the leaves, having a good deal the appearance of a slight shower of cherry petals over the green leafy coating on the water. The flowers are absolutely useless for bouquet work or cut flower work of any kind. And as the vines grow continually immersed in water except the floating rosetted ends, they are unfit for training out of the water as one would an ivy. At the same time these trapas are curious and interesting plants.

"But if you want to get anything new, rare or exceptionally valuable in the way of plants, seeds or flowers, please remember the street fakir is the last man in the world to be able to supply you with it. But if you want to be humbugged he generally can accommodate you."

Philadelphia Notes.

Trade is really not so bad considering it is Lent. We have had it worse than it is now in former years. Some of us complain of course, we often do so, just because we are never satisfied. Nor will we ever be. It is human nature not to be satisfied, excepting with ourselves. Just so soon as we all become thoroughly satisfied, goodbye progress.

Hybrid roses are plentiful now and are likely to continue so until Easter. There is a prediction afloat that there will be an over supply for Easter, or at least immediately preceding or succeeding, if not really at that great occasion.

The spring show is approaching and it is a pleasure to report that Secretary Farson declares that it will be the best spring show ever held by the Penna. Horticultural Society. It comes at a good time when the many bulbs and other spring blooming plants are generally in their prime.

An orchid was found in bloom a few days ago by one of our growers among his vegetable *verit-a-bra*, and he knowing that orchids were in demand hied himself to the city with it, and sold it, charging on his bill 50 cents. A protest was made, the high price being objected to. Our grower-salesman declared with much vigor that it was a cattleya, and, having become acquainted with the fact that cattleyas were selling at 50 cents each, he could not understand why he should not receive the market price. Its diminutive size was objected to. It was more like a lilia than a cattleya. After a little more parleying 25 cents was agreed upon as the price. Very soon after the sale was made the flower showed unmistakable signs of early dissolution. It was in this stage when seen on exhibition. The question is, what caused it to show signs of early decay. Some persons think that en route to the city was looked at so often and fondled so frequently, that its sensitive and delicate nature rebelled against that kind of treatment. It is a lesson for us all to be very careful in packing flower, even if we may only have one sometimes.

The carnation controversy now going on in the columns of the FLORIST is causing much talk among the trade here. It is generally admitted that what ever Mr. Chitty may lack in quantity cut from a given number of plants he amply makes up in the prices realized, but the point at issue seems to be the number of flowers cut, and not the prices at which they sold. And for that number of plants to occupy the space given, they must have been very small plants indeed, for according to Mr. Chitty's figures each plant occupies much less space than usual here. Paterson must be an excellent city for the florist's business, that is, in comparison

with this, for it is very seldom that carnations are retailed at more than 50 cents a dozen. The discussion is making most of the florists green with envy, and Mr. Chitty must not be surprised if half a dozen of them migrate to that much favored New Jersey city and start opposition flower stores. If they do,—he has only himself to blame. R.

The elements have been against us the past week and sales could not have been much worse. Good flowers will almost sell themselves, but of course they must in some way be brought to the notice of customers. We believe that very few really first-class flowers, go to waste anywhere, they are so handsome, that they compel admiration. Although all plants and flowers are bought for sale, we have often heard the remark: "I am sorry to see them go they have attracted so much attention, I could sell a great number if I could get them." But arrange them as they would, the flowers wasted their fragrance on the desert air, as the weather kept the promenaders indoors. We hope for better things next week.

Edwin Lonsdale is cutting some very fine Brunners, the best seen about here this season. A great many of our choicest roses find a market in Washington. We protest but to no purpose as we are told that they bring more money there than they bring in this market and that settles it.

Mr. J. Y. Smith's mushroom plant at Doylestown, was burned to the ground Saturday February 25. Loss about \$4,000, mostly covered by insurance. The greenhouses escaped.

The street fakir with the wonderful water plant has been in our midst for some time. He sets up in a vacant doorway, with a small table on which are two or three quart glass jars filled with water, inside of which the wonderful water-plant seeds are to be seen sprouting and blooming, yes blooming. At first potato sprouts were stuck into the seeds, which are weighted to the bottom of the jar; one was assured they would sprout in this way in two or three days and in a very short time would grow up out of the bottle all around a window and bear beautiful scarlet blossoms. Passing in a few days later, we were surprised to see the seed in bloom in the water; the potato sprouts had been discarded and pieces of sweet alyssum were now doing duty; this was the white lily, later on, the beautiful red lily put in its appearance, a piece of scarlet sage apparently coming out of the seed. They seemed to sell very well at 10 cents a seed, and a slip with printed directions for growing.

A match game of ten-pens was played at the club alleys last Friday night, the bright particular features of which were

Edwin Lonsdale's score of 214, the highest score ever rolled here in a match, and Mr. Daniel Farson carrying off the booby prize. S.

Boston.

There is considerable grumbling to be heard regarding the condition of the flower trade, and it comes from both growers and dealers. The weather has been, however, unfavorable to over-production, so that flowers of good quality still command fair prices.

Long stemmed carnations hold very regular and have never sold any better than they are selling this season. Violets too, sold their own and just now they are specially fine. A fair supply of good Hybrids and Jacqs is coming in. On bulbous stuff the market is somewhat demoralized, tulips being especially in the dumps and the prices realized for these in many cases are not much if any more than the first cost of the bulbs to the grower. A few orchids are to be seen in most of the florists' windows. In some of the more pretentious windows a suspended plant of dendrobium in bloom seems to be a favorite method of competitive decoration.

Shapely plants of cythus, cyclamen and Lilium Harrisii are quite abundant.

Mr. D. Zirngiebel shows a very handsome carnation, Bouton d'Or, which is one of the new French varieties. The color is a soft pleasing yellow with a few faint markings of red and white. The petals are broad and well formed and the flower is very large, being in many cases fully three inches in diameter. Jeanne Morel is another of the same set, ground color yellow but with the edges of the petals deeply mottled and striped with dark red.

The lecture before the Mass. Hort. Society on Saturday February 28, was by Dr. C. R. Rounds, Principal of the State Normal School, Plymouth, N. H. The subject was "School Instruction in Horticulture and its Advantages." On the exhibition tables were some cases of cut flowers shown by Mr. F. L. Harris, gardener to Mr. H. H. Hunnewell. Among these was a very fine spike of Phalaenopsis Stuartiana, which received honorable mention, also P. grandiflora, P. Schilleriana, Anselia Africana, the "Chatsworth variety" of *Coccygus cristata*, and several species of acacia, including the graceful A. Ricana which is not often seen here.

Mr. Chas. J. Dawson, gardener at the Bussey Institute, showed a pretty collection of forced hardy shrubs and herbaceous plants, including *Pyrus baccata*, *Ecochorda grandiflora*, *Rosa nitida*, and some very handsome blooms of *Cypripedium spectabile*.

Mr. A. Ingram, representing Sander & Co., of London, is in town paying his respects to the orchid growers.

Mr. Haswell, business partner of Mr. J. W. Porter who swindled so many members of the S. A. F. by collecting money for pictures which he never delivered, has done all in his power to undo the mischievous work of his recalcitrant partner. Photographs have been sent to all those entitled to them as fast as their addresses could be obtained, and as there are a few more copies left members who so desire can obtain the same by enclosing \$1 with their address to Mr. Geo. F. Haswell, 262 Center street, Jamaica Plain, Mass. If there are any members who paid for pictures at convention time and who have not yet received them, they can obtain them by notifying Mr. Haswell to that effect. W. J. S.

New York.

Trade good considering that it is Lent. There is just demand enough to use up the supply nicely.

The principal feature of the week was the orchid show given by J. M. Hodgson at Hodgson's Hall. The hall was turned into a beautiful conservatory, the ceilings being almost covered with southern clematis and the pillars changed into columns of flowers. In every nook and corner there were banks and mounds of orchids. In the centre of the hall was a large ship made entirely of cattleyas resting on a large mirror which bore an excellent resemblance to water; this was one of the most striking features of the show. There was also some very fine daffodils and tulips in boxes grown by Mr. Ernst Assmus of West Hoboken and Mr. John Reid of Jersey City. The music for the occasion was furnished by the Hungarian Band. Mr. Hodgson was delighted with the results and promises to make it an annual treat.

P. L. Bogart had a very large dinner order Friday for the American Yacht Club, the principal feature being a large pilot wheel 10 feet in diameter made of pansies, violets and carnations.

John Nugent had the decoration for the dinner of the directors of the Western Union Telegraph Co. The principal features consisted of large baskets of daffodils, LaFrance and orchids.

The New York Florists' Club is sparing no effort to make the show at the Lenox Lyceum a success and from present indications it cannot be otherwise.

At the meeting of the Committee of Arrangements Wednesday it was decided to offer much larger premiums for azaleas, genistas, etc., than was stated in the preliminary schedule. The prizes are such that all growers of these beautiful plants should enter and endeavor to come out ahead.

They have also offered a silver cup, value \$35, or cash value, for the best specimen orchid in bloom. This should excite rivalry among the amateurs.

The N. Y. Sun in an editorial on Tuesday, February 24, dwelt at great length on the project for the establishment of a Botanical Garden in New York modeled after the famous Kew Gardens near London. This would be a great thing for the people and a gain for horticulture.

At the Bowling Club Monday Theo. Roehrs again captured the medal with the score of 185. The rest of the boys were in it for six frames when Theo. commenced making strikes and that settled it.

"Johnny" Weir made the great score of 215 last week and is showing up in great form. He hopes to be one of the best after he has had more practice.

JOHN YOUNG.

Orchid Arrangement on a Divan.

One of the pretty features of the decorations arranged by Klunder for the Astor ball in New York is shown in the accompanying illustration. The drapings of *Lygodium scandens* from the chandelier were gracefully entwined with the mound of cattleyas on the divan beneath.

YOU CAN NOT afford to take any chances on your spring advertising. The only way to reach the WHOLE TRADE is through the AMERICAN FLORIST.

CIRCULATE your spring trade lists in our EASTER NUMBER, to be issued March 15, and you will contain forty pages. That number will be a beauty.

Carnation Lamborn.

ED. AM. FLORIST.—It is satisfactory to note from Mr. Chitty's lengthy letter in your issue of February 19 that the several criticisms which have of late appeared in your columns re carnation Lamborn have in no wise damped his ardor or lessened his rhetorical powers. It is quite delicious to read that he "greatly dislikes the task of dashing the cup of bliss from the lips of these exultant heroes just at the time they are regaling themselves with such a generous swig," and straightway continues that "these gentlemen (i. e. his critics) have permitted themselves to be caught in their own traps," but as his heart would appear to have been "bubbling over with gratitude and exhilaration" at the dismay which his letter would cause in his opponents' ranks — to which a dynamite bomb would be a mere flea bite — in the fullness of his heart was convinced that it was his bounden duty to be "unanimous" and not cower over or trample upon his fallen foes. After this preliminary antidote which he, I make no doubt, intended to ease the wounds to be inflicted by his keen shafts of ridicule and sarcasm, he proceeds to carry the war into the enemy's country.

After dealing a few knock down blows to Mr. Lombard—who will, I make no doubt, be able to return them with interest—he proceeds to devote three columns of your journal to an indictment and refutation of my letter. From the tone of Mr. Chitty's letter it would seem that his letter was final and that further discussion was both idle and out of the question. He appears like Hercules on the field of battle, who after standing the gibes of his opponents with exemplary patience for a time, at last got riled and laid them groveling in the dust. I crave of Mr. Chitty not to be unduly incensed at my presuming to offer a few words of criticism in reply to his lengthy communication.

Let me turn in the first place to his cash column and endeavor to point out a few errors, or exaggerations, whichever he prefers, to have them called: 16,000 Lamborn flowers at \$50 per 1000, less 50 per cent cost of production, realize \$800 net. My arithmetical powers are no doubt at fault, but I fail to make more than \$400 net. Will Mr. Chitty explain the deficiency, or does he get \$100 per 1000 for his blooms excluding cost of production? Again, his 6,000 Lizzie McGowans netted him \$300. Did he also get an average of \$100 per 1000 for these? Similarly his 2,000 Silver Spray averaged \$50 per 1000. For these 24,000 flowers Mr. Chitty obtained, he tells us, \$1,200, which with 50 per cent deducted leaves him \$600. So much for his blooms. If he obtained 10 cents each on an average for all his flowers, my criticism is abortive, but he distinctly told us in his first letter that they averaged just half that amount.

The remaining \$2,037.50 in your correspondent's ingenious manipulation of figures is for cuttings sold, or which he hopes to sell shortly. On this point I have only to say that it is not the good fortune of many florists to be able to

secure such ready sales for a large number of young plants, nor to get such high prices for them as Mr. Chitty has done. Were it not for the fact that Lizzie McGowan is a new variety commanding six times the price of the general run of carnations his cash account would be further reduced by \$1,538.50. It is an extremely chance circumstance which allows him to sell 30,000 cuttings at \$12 per 100. If he will re-figure up his cash account, allowing the same price for Lizzie McGowan cuttings as Lamborn, he will find that with the necessary \$600 reduction on the cut flowers that his pile of figures drops from \$3,237.50 to \$1,090.50, which is quite a trifling difference. Mr. Chitty is very well aware that few florists are so favorably placed as he is for disposing of his stock at retail prices, he is a well known and thoroughly established man of business, residing in a popular district convenient to the principal flower market of America, and whose name and fame as a cultivator has been spread all over this great country by your widely circulating paper. On the other hand, I am a new beginner, not yet having been in business for myself for one year, and consequently being by no means thoroughly settled down or established. It would be the sheerest folly for a small grower like myself to propagate a large number of carnations for sale; were we all to go in for them as heavily as Mr. Chitty what sort of a price would carnations bring?

Having glanced cursorily at Mr. C.'s majestic line of dollars I must be closing say a few words in my own defense. My blooms cut up to February 1 were 35,000 as stated. I have no large retail trade for flowers here, and while I can sell a certain number at 35 to 40 cents a dozen I don't suppose my blooms averaged over \$2.50 per 100, and I fear few florists in the neighborhood can command higher prices. Mr. C. generously knocks off 50 per cent for my cost of production, to this, however, I must take decided exception. I have figured up matters carefully and find that although Mr. C. may spend 50 per cent in growing his stock, I can with every due allowance produce mine for 25 per cent. This will increase my net receipts to \$656.25. I may here remark that I manage my establishment without any paid help during six months of the year and this permits me to produce my stock at a lower margin of cost than Mr. C. Further, my carnation house is not entirely devoted to carnations. At one end I have bouvardia on the side benches, at the opposite end I have smilax, down the center of my middle bed I flowered a quantity of chrysanthemums and I am now flowering Lilium Harrisii in the same place. Shelves round the house are devoted to freesias, etc. in boxes, while cinerarias and other plants are dotted all over the front of the benches. I have kept no tabulated account of the receipts for the special flowers other than carnations grown in this house, but added to the amount taken for carnations I am well within the mark in estimating it at \$900, less cost of production, or over double what Mr. C. credits me with. Mr. C. tells me that the actual space occupied by his Lamborns is only 801 feet. I don't grow plants in my paths as his letter would seem to imply; deducting the space occupied by paths (including one down the middle of my center bed) and spaces taken up by other plants, I have less than 1,300 feet devoted to carnations, so that his boast about his 801 feet being "199 feet less than half" my own entirely collapses. I don't grow carnation cuttings for sale, although I

have put in 4,500 for my own use and sold or given away to friends some 5,500 more. I might very fairly add the value of these to my cash account, but I will abstain from so doing believing that my cut flowers make in themselves a sum for which no novice in the trade need feel ashamed.

Having demolished the frail structure I reared, to his own supreme satisfaction, Mr. Chitty boldly challenges us to set up a stand of flowers of Mrs. Fisher against Lamborn at Chicago, New York or Philadelphia. Why except Boston? Mrs. Fisher has many admirers round that

ORCHID ARRANGEMENT ON A DIVAN.

city and there are, I doubt not, plenty of florists who will be quite ready to meet him as desired. Mr. C. can scarce expect me, situated as I am with a small place and comparatively small number of plants to cut from, to compete with one in his position, but I am willing to grow any given number of plants of Mrs. Fisher up to 500 and set them against a similar number of Lamborn to be examined by me, to be examined weekly or fortnightly by competent judges during the whole blooming season and quantity and quality of blooms to be taken into consideration as well as ground space occupied. I can not devote an entire house to Mrs. Fisher or I would be glad to set a house of it against one the same size of Lamborn grown by Mr. Chitty. I have tried Lamborn and discarded it, Lizzie McGowan I am anxious to give a trial to, if Mr. C.'s stock is not entirely sold out.

Allow me in conclusion to state that if Mr. Chitty's 3,500 Lamborn plants no more than fill 800 feet of space the plants must be decidedly small ones. My own plants (1,700) are thickly crowded, although occupying 500 feet more of space. I am glad your correspondent's last letter contained so many interesting points omitted in his earlier communication. I am sorry if by my explanations or criticisms I have lessened at all his feelings of gratitude and exhilaration. I have endeavored to give him my experience in plain ungarbled facts. As before stated, I am a new beginner and have many other

things to attend to in addition to carnations, I do not restrict myself to growing white ones, although had I done so I would have been able to cut 8,000 to 10,000 more blooms up to date. My "insignificant little dab" looks better on examination, while Mr. Chitty's majestic column of figures shrinks marvelously when critically examined. Wholesome criticism is good for all of us, we can not all be Mr. Chittys, nor roll the dollars in with the celerity he does, but I feel quite satisfied with my own receipts so far; could I but get as much for my stock as New Jersey growers appear to do, our respective money columns would bear a totally different aspect.

WILLIAM NICHOLSON.

Framingham, Mass., Feb. 23, 1891.

Carnation Contest.

A SPECIAL PRIZE PROPOSED TO BE OFFERED BY THE NEW YORK FLORISTS' CLUB.

Please read what Mr. J. N. May has to say, which is as follows:

"Your suggestions about offering a premium for the best seedling, or rather new carnation, set me to thinking, and the following is the result:

"On looking up the matter of cups for our coming show, on Friday last I came across the most beautiful cut glass cup in decanter shape, covered in beautiful artistic solid silver, inlaid with flowers, etc. It is entirely new in design and finish and as the makers, one of the leading firms in New York, offered it to us at a surprisingly low figure to introduce it, I took upon myself to order it. Now, as you are familiar with the raisers and introducers of new carnations, I will make the following proposition, which I will ask you to lay before the parties interested:

"This cup shall be offered for the best new carnation introduced in 1891 or 1892, in the form of a sweetstakes. The cup is valued at sixty dollars (\$60). The New York Florists' Club will donate \$30 of the amount. The balance to be raised by the competitors for the prize, pro rata. The winner to have his name and the object for which it is to be awarded engraved thereon. And certificates of merit will be awarded to any other deserving new varieties. The only conditions imposed are, that the balance, \$30, must be in my hands not later than March 15 next, so that the matter may appear in the final programme or schedule, and I would further propose that the exhibitors be the judges to decide which shall be deserving of the prize.

"If you can work this matter up I will be pleased to assist you in so far as I am able, but my hands are more than full at this time, so will have to leave the necessary correspondence to you. If the carnation men wish to advertise their goods this is a big chance for them, as the newspapers will take the matter up we are assured, by special arrangements, and give all the varieties exhibited a notice according to their respective merits. Yours very truly, JOHN N. MAY."

This is certainly an opportunity which should be fully taken advantage of, and it is to be hoped that all carnation growers will do everything possible to advance the project. It will be a good advertisement for carnations in general, and materially in lifting the "Divine Flower" into that position which sooner or later it is destined to occupy—up front. What makes me anxious is, can carnations be exhibited creditably in April? The spring show takes place April 7 to 11. Is it possible to have as good pot plants, for

instance, in April as it would be in October and November? Let the Thorpes, Starrs, Wights, Swaynes, Chittys, McGowans, Hills, Donners and every carnation grower answer.

It will be seen by Mr. May's letter that action must be prompt, and the sooner the views of every person who has an opinion of his own is sent to me the better. And please address

EDWIN LONSDALE,
Chestnut Hill, Philadelphia.

Carnations at Corfu.

It is easy to see, by the recent articles in the FLORIST, that growers are of one mind in regard to the most profitable carnations. Lessons may be learned from the recent discussion, and had the writers given more minute information as to soil and treatment we should have had a fair summary of modern carnation growing.

Mr. Chitty praises Lamborn, and with him and many others it doubtless does well, but here in western New York it is not a success. Within the last two months I have visited most of the large growers in this vicinity, and while I have seen Lamborn at several places yet no where did it appear to be worth growing—at least for midwinter.

On Saturday last, accompanied by Mr. Wm. Scott, I visited the establishment of Webb Bros., at Corfu, N. Y., and a description of the varieties grown here will indicate the most popular carnations grown in this section.

Corfu is situated about 25 miles east of Buffalo and has been noted for several years for the fine quality of carnations grown. The Messrs. Webb make a specialty of carnations, though some roses are produced—and good ones too. The soil is a sandy loam and can be worked in a few hours after the heaviest rain.

The houses are three-quarter span, 21 feet wide by 150 feet long and run nearly east and west. Each house has four benches, and as planted they take about 3,600 plants to the house.

At the time of our visit a house devoted to Hinz's White presented a fine appearance, probably a thousand fully opened flowers, measuring from 2½ to 2¾ inches in diameter and on long stems, could have been cut. This house, we were informed, has been *in* all winter, and it promises to be good for the next four or five months.

Hinz's White does not seem to come in crops around Buffalo, but is a regular and continuous bloomer, and I feel sure that if it did half as well near New York no one would think of throwing it out.

In the next house we saw Lamborn, Swayne and Harrison. Lamborn was full of buds and partly opened flowers, but the number of blooms fit to cut was very small. The complaint is that it does not open. Mr. Webb thinks that later in the season it will do better. Swayne is open to the same objection—it does not open. Harrison "was a sight to behold," the plants were full of bud and bloom, the flowers opening full and quickly, and seemed to me to be the most profitable carnation here.

Silver Spray is grown and appears to be the best pure white grown here. Grace Wilder did not look as well as it usually does with us. Mangold, however, looked well. For reds Portia and Garfield are grown, but the former seems to be the best here, and its small bright blossoms were abundant. Here, too, we saw a bench of Tidal Wave, while the flower can hardly be distinguished from Century

yet its superior constitution and habit causes it to be preferred; it needs however to be disbudded to obtain long stems.

Of the fourteen or fifteen thousand plants needed for planting here nearly all were rooted and the larger part were growing in flats.

A call was also made at Mr. Gidding's place, but nothing new in the carnation line was seen, nor did we see the proprietor, but we did see a few very fine violets growing in the end of one of the houses.

Of course we saw a new seedling; this time it is a dark one—a seedling from Anna Webb, but we did not see it in flower, so it still remains a dark horse. Probably Messrs. Webb will have it in shape for fall exhibitions.

J. F. COWELL.

Buffalo, Feb. 18, 1891.

The Carnation Contest.

ED. AM. FLORIST.—In your issue of February 19, under the head line "Carnation Lamborn," Mr. H. E. Chitty, of Paterson, N. J., offers to match 25, 50, 75 or 100 Lamborn against an equal number of Mrs. Fisher, at Chicago, Philadelphia or anywhere out of Boston, for \$50 to \$100. Also to match McGowan against the field of whites at either New York, Philadelphia or Chicago. Now I suppose that many carnation growers should like to take a hand in such a contest, but as Mr. Chitty has made provision for but one competitor in each class, there will be a difficulty in settling the question as to who shall enjoy that exclusive privilege. Mr. Chitty seems to have allowed his enthusiasm to outrun his business judgment, otherwise his proposition would have contemplated a wider field for a test.

Now I wish to amend Mr. Chitty's proposition by naming Chicago as the place for the contest, and to permit any one to contest by paying an entrance fee of \$5, or any other sum that may be agreed upon, the winner to receive \$100 for first and \$50 for second best. The writer guarantees at least one entrance fee of \$5, to such contests if so required. Possibly Mr. Chitty will consider the western states scarcely in the race—they are at least out of Boston, therefore eligible.

It is hoped that this proposition of Mr. Chitty's will bear fruit, as if honestly managed it will be the means of settling in a good measure the question as to the comparative merits of the (possibly) over lauded newer sorts. The facts in the business are of chief importance and let us make an effort to find them out.

F. G. GOULD.

Excelsior, Minn., Feb. 19.

CARNATION EXCELSIOR.—Mr. C. E. Brinton, Wilmington, Del., sends us a dozen blooms of a white carnation which on opening we felt sure was Lamborn, but his letter states that the blooms are from a seedling raised by him and which he has named Excelsior. The flowers are of the same size and general appearance as those of the Lamborn. They have good long stems and the calyx is perfect. Mr. Brinton says he has several other seedlings that promise well.

WHEN writing to advertisers please mention the fact that you were induced to write by the advertisement in the AMERICAN FLORIST. You will benefit us by letting advertisers know that it is the FLORIST that is bringing them trade.

SEND YOUR adv. now for our special Easter number of 40 pages, March 19.

Notes from Fairfield, Conn.

BY WM. FALCONER.

Fairfield is five miles from Bridgeport. When passing through Connecticut, recently, I stopped over a little while to see John Dallas, whom we all remember about New York as being the exhibitor of the splendid specimen of *Adiantum Farleyense* that was shown at the New York chrysanthemum show a few years ago.

His place is about fifteen minute's walk from the R. R. station and consists of a lot of greenhouses filled with all manner of plants.

The big *Farleyense* (figured in the FLORIST, page 513, June 1st, last year) is growing in a large wood-sound and looks very fine. It occupies a place in a warm greenhouse where it is raised up pretty well above the surrounding plants so that the air can pass freely between its fronds; the house is shaded and the atmosphere kept moist and the fronds of the *Farleyense* are all stacked up to keep them from laying down flat upon one another and rotting each other. Mr. Dallas grows it in a compost of fibrous loam and rotted manure, just such a soil as one would use for geraniums or other gross-feeding soft-wooded plants. Years ago he used to grow *Farleyense* and all other deep rooting ferns in the conventional peaty compost, but a few years ago he took a trip to Europe, and while journeying through Ireland he was advised of a sale of very fine greenhouse plants about to take place. He went to the sale and there beheld the finest specimens of *Farleyense* he had ever seen, and he bought a lot of them and sent them home to this country. Curious to know the secret of such successful cultivation, coming from America he soon had the goodwill and confidence of the gardener. "Fade them well," said he "give them torfy loam and plenty manure, and the divil a bit of 'pate at all at all." And he has ever since followed this advice not only with *Farleyense*, but with all other vigorous deep rooting ferns. Surface-running rhizomatous sorts, of course are still treated to rough peat and moss.

Some finely pitched nepenthes, especially *N. Mastersiana* and *N. Siebrechtii*, growing in pots and baskets in a compost of fern-root and moss were suspended from the roof of a warm, moist house.

A particularly brilliant form of *Anthurium Andreanum* glistened in a bank of green tropical foliage. Besides propagating it by cuttings he also has raised a lot of seedlings from it.

Orchids occur everywhere, suspended on blocks and in baskets from the roof and packed together on the benches, and some of them are continuously in bloom.

Bongainvillea spectabilis was in full bloom. It is a hard-wooded vine, easy to grow, easy to bloom, exceedingly showy, and in its finest estate in winter. A very large allamanda also occupies this house. Its growth is discouraged in winter, at the same time it will keep on growing. When the house is pretty well emptied of plants in summer, the shoots of the allamanda are unfurnished and let hang down all around, and then comes their sea of golden glory. In a cooler house the semi-double form of the Catalonian jasmine is very beautiful but Mr. D. doesn't favor it much for cut flowers although it keeps better than the single one. Planted out at the north end of a cool house and trained up to and along the roof are the white and red forms of *lapageria*. When he made the bed for them he sent to New Jersey for

STAIR DECORATION

the peat. They love a cool temperature, moist atmosphere, partial shade, well-drained soil and abundance of water.

A good many epacises and Cape heaths are grown. They are planted out in the open ground in summer and lifted and potted in fall.

Some of the smaller acacias are now a mist of yellow loveliness. In the near future I believe these plants will become a good deal more popular than they now are; indeed were they grown and offered in good condition, and in quantity they no doubt would be popular enough now.

Bedding plants receive a good deal of attention. Of course everybody has a new coleus, so has Mr. Dallas. Acalyphas for boldness and brightness in warm sunny spots are much prized, and among fancy geraniums Shrubland Pet, although old as the hills, is still indispensable.

Last summer he had a splendid lot of violet plants in a prepared border behind a tall hedge, but when August came, the disease struck them and swept them off clean. His neighbor on the other side of the hedge set his plants out in the open field and sunshine, and the disease didn't strike them at all. However, the different locations might have had nothing whatever to do with the matter.

Some years ago he used to run one house of string beans in winter, sowing the beans in rows cross wise in beds on the benches, but a high barn having been erected near this house and where it obstructed the sunshine in December and January, bean-growing had to be given up as a mid-winter crop. But by getting them to the blooming stage about the first of February, when they again begin to get a good deal of sunshine, fine crops are yet to be had. The Mohawk is the variety grown as it comes in quick, and carries a good weight of long, green heavy pods.

He has good success in flowering *Nymphaea Zanibarenensis* in summer, but experiences some difficulty in keeping the old roots over winter. True, he can raise flowering plants from seed every year, but in the case of these the summer is pretty well advanced before they begin

to bloom. He gets over the difficulty however very easily. He raises the seedlings in summer, pots them singly and in small pots and here lets them stay and starve for the balance of the year and over winter. In early spring when they are repotted they start into growth vigorously and are most in bloom as soon as summer opens.

Mr. Dallas has an outside rockery he thinks a good deal of for it is filled with all the nice little choice plants he can get together and which he cannot trust to the tender mercies of a thoughtless hoe or spade in an open plat or border, and the rocks are clothed with creeping euonymus and Veitch's ampelopsis. Think of his chagrin one day last summer when a lady came to him to ask for permission "to pull up some of the plants that were growing out there in the rubbish heap!" What darkness! But John pulled the wisp of ignorance out of the window of her knowledge of horticulture and gave her light.

Stair Decoration.

The illustration shows one feature of the decoration arranged by Siebrecht & Wadley for the Havemeyer ball in New York February 2. At the foot of the stairway is a bank of blooming pot plants of the Magna Charta rose, each plant carrying from five to seven open flowers. There were fully 2,000 open roses in the bank. At the top is a plant of *Chamaerops humilis* stricta twenty-one feet in height.

A Few Useful Plants.

BAMBUSA FORTUNEI VARIEGATA.—This dwarf bamboo may be considered among the variegated plants that should find an opening among the trade. It is nearly hardy, and forms a neat little tuft of its slender canes, the latter being well clothed with small linear-lanceolate leaves that are very distinctly variegated with yellow stripes. As it seldom attains a height of more than 18 inches, and is more often seen in compact clumps that

are about 9 to 12 inches high, it will readily be seen that this plant is not likely soon to outgrow its quarters. I have stated above that this bambusa is nearly hardy, though south of Philadelphia it may be quite able to stand the winter, and in a favorable season may endure the exposure in this latitude, but like *Arundo donax variegata* cannot always be depended on as a perfectly hardy plant, though I have seen the latter stand well some seasons without any protection whatever. *Bambusa Fortunei variegata* is readily propagated by division, and if potted up in small pots and kept in good condition would be a likely plant for the retail trade.

PHYLLANTHUS NIVOSUS.—This is a very pretty member of a very large genus of euphorbiaceous plants, and certainly deserves to become better known. It is a warm house plant of shrubby habit, and has ovate leaves that are much mottled with white, in fact the tips of the shoots are sometimes entirely white, thus giving the plant a very striking appearance. *Phyllanthus nivosus* is propagated by means of cuttings which root quite readily when placed in a propagating frame, providing they are not too soft. The young plants require a little judicious pinching from time to time in order to keep them in shape, and will grow freely in light loam that has been moderately enriched with some old manure. Though introduced nearly twenty years ago this *phyllanthus* does not seem to have become very common, but as the use of a greater variety of foliage plants becomes revived this charming example will doubtless find a place.

DICHRISANDRA UNDATA.—This is also a comparatively old plant and could be made a very useful one if used in the same way as small rex begonias are frequently used in window boxes and ferneries. *D. undata* is a dwarf-growing species from the South Sea Islands, and though this locality usually gives us the idea of intense heat yet an extreme temperature is not absolutely essential in this case as a satisfactory result may be obtained in a temperature of 60° to 65° with a moist atmosphere and moderate shading. *D. undata* produces broadly ovate leaves that are about 3 to 4 inches in length and of stout texture, the color of the upper side being chiefly dark green, though marked with longitudinal bands of a lighter shade, while that of the under surface is purplish. The leaves are also curiously waved or undulated, from which fact the specific name is derived. This pretty little plant may also be propagated by cuttings, which may be rooted as readily as those of some of the small growing marantas.

CAMPYLOTRYS REFUGENS.—This is another of the available plants for small work, and is here referred to under the old name because it will probably be more easily recognized by the title on under its newer designation of *Hoffmannia*. This plant will attain a height of from 1 to 2 feet, but is not specially desirable in this size, for it is much more useful in small pots. The leaves are from 2 to 4 inches in length, and dark green flushed with red on the upper side, while beneath they are reddish purple. *C. refugens* is rather an old-fashioned plant also, but as many of our readers will doubtless remember is a very attractive one when nicely grown.

LIGULARIA KÄMPFERI VAR.—Better known under its old name of *Farfugium grande* is another deserving old plant

that seems to have been relegated to the rear rank for some years past. It is nearly as tough as an aspidistra and is really on excellent house plant besides being of value for bedding in summer. It seems scarcely necessary to describe this plant further than to say that the leaves are nearly round, dark green and glossy and profusely spotted with yellow. Division is the usual method of propagation, and partial shade and plenty of water among the most essential conditions for its welfare, but even when exposed to the dust and dry atmosphere of a dwelling this ligularia is hard to discourage, and is likely to be seen in a flourishing condition.

W. H. TAPLIN.

Dollars and Cents.

I wish to make a few comments on the "dollars and cents" portion of Mr. Thorpe's article in the *FLORIST* of February 19. He says: "It has been stated that the chrysanthemum flowers interfere with the sale of roses and carnations, but I notice that nothing interferes with chrysanthemums in their season."

If Mr. Thorpe speaks for Philadelphia and its suburbs he is greatly mistaken. The fall trade about Philadelphia was good until the appearance of chrysanthemums about the first of October, but after the chrysanthemums became plentiful general stagnation prevailed in every department of our trade except that part preempted by the street fakir, who improved the shining hours by hawking chrysanthemums on the street for 15 cents and 25 cents a bunch of 50 and 100 flowers. Not only did the chrysanthemums interfere with the sale of other flowers but they interfered with themselves as far as the regular dealers were concerned. It was a general expression: "If the chrysanthemum glut would only get over, trade would improve." Nearly every store keeper expressed himself in this way until the chrysanthemums were gone, and many of them went on the dump pile. Probably one-half of all the chrysanthemums sold between October 15 and January 1, were in such an advanced state of ripeness that they would begin to fall within 24 hours after being sold, proving that the growers were overloaded with unsalable stock.

We found collections difficult during that period, the store keepers saying that while they handled more stuff and paid out more money than usual the cash receipts were less. More stuff went into the ash-barrel and the credit side of the ledger did not show up well. So seriously was business affected that some of the most prominent retailers in Philadelphia advised that some measures be taken to restrict the supply.

Our trade was affected to such an extent that our cash receipts for October and November were less than for August and September, though our cut during the months last named was much less than during the chrysanthemum season. In August and September we did not

have half enough flowers to meet the demand, but when the chrysanthemums monopolized the market we could not sell half of our product.

In my opinion, the grower Mr. Thorpe referred to as having 30,000 flowers in sight, did not get \$15,000 for his crop. And in Philadelphia it is likely that more Chrysanthemum flowers sold for 50 cents a hundred than for \$50 a hundred.

The rest of Mr. Thorpe's article makes very good reading—now, since many have forgotten the vows they made a short time ago, never to grow another chrysanthemum. THOMAS DEWITT, Bristol, Pa.

Horticulture at the World's Fair.

Following we give in full the classification adopted by the "World's Columbian Commission" for the horticultural department of the World's Fair. With the exception of group 21, this is the work of Prof. Blake, of Yale College.

Our readers will be amused to see that according to this classification horticulture (group 22) means *Kitchen Gardening*, and seedsmen and nurserymen will doubtless be highly gratified to observe that they received recognition, one as a subclass (144) of floriculture, the other in a single line in class 154.

For group 21, which heads the list and dominates all the rest, we are indebted to M. H. DeYoung, proprietor of the *San Francisco Chronicle*. There was no other member of the classification committee with sufficient knowledge of horticultural interests in the country at large and sufficient back bone to successfully oppose the indomitable will of this doughty champion of the Pacific coast, and with but feeble opposition he succeeded in forcing the wine and brandy interest to the fore from making it the most prominent feature of the proposed horticultural display. It might be supposed that he would be satisfied with this much glory. Far from it. The statement appeared in the Chicago papers some weeks ago that Director-General Davis was about to appoint an Illinois man, as chief of the Bureau of Horticulture. This was enough to excite him to direct wrath. He at once proceeded to Col. Davis' office to protest, and in the interview gave emphatic vent to this remarkable utterance, "*There is no horticulture outside of California.*"

Afterwards he telegraphed from San Francisco: "California must have the Bureau of Horticulture." Other telegrams to the same effect followed thick and fast, and it really seemed to Col. Davis that a pause was necessary, so a pause was had, and has continued ever since. In a recent issue of the Chicago *Times* appeared the following:

SAN FRANCISCO, CAL., Feb. 24.—The question of the appointment of the chief of the horticultural bureau of the World's Fair has been taken up by all the leading newspapers of the state, who are urging the selection of Gen. N. P. Chipman, of California, for the position. All the principal exchanges and the state board of trade have authorized Director-General Davis to make the appointment, contending that the recognition which would be given the Pacific coast in her leading industry would insure that state an appropriation of \$50,000, which would be largely increased by private and other subscriptions to more than double that figure.

The same influence that succeeded in placing wine and brandy at the foremost interest of horticulture now demands that a representative of this interest be placed at the head of the department.

Horticulturists of America, how do you like it? Are you willing that the horticultural department of the exposition shall be under the direct control of the

influence which has already succeeded in placing viticulture ahead of horticulture, of which it is merely a small sub-division? Are you willing to have the department which is to be called "horticultural" made mainly a display of wines and brandies? To our mind the alcoholic products of fruits should have no place in the department. And what may the horticulturists of the country outside of California expect at the hands of one who has arrogantly claimed "There is no horticulture outside of California?"

California's resources are undoubtedly great and she should have every opportunity to make a complete display at the exposition, but when she proposes to dominate the whole department she should have the fact brought to her attention that she represents but a small portion of the horticultural interests of America and that the great exposition is to show to the world the resources of the whole country and not one state alone, however large an opinion it may have of its own importance.

It is time for the horticulturists of America to make themselves heard in this matter.

State Horticultural Societies who have not already done so should by their executive officers let Col. Davis know at once what effect the appointment of a California man under these circumstances would have in discouraging exhibits from other states, and we earnestly hope that our contemporaries of the horticultural press will take the matter up in vigorous editorials. We would further suggest that they not only send marked copies, but pending publication that they mail advance proofs of intended editorials to Director-General Geo. R. Davis, Rand McNally Building, Chicago, that he may know at the earliest possible moment what the horticulturists of the rest of the country think of these outrageous assumptions on the part of the representatives of a single state.

The appointment of chief of the horticultural department will probably be made March 13, and whatever is to be done must be done at once.

Here is the wonderfully constructed classification which has been adopted by the commission.

DEPARTMENT B.

VITICULTURE, HORTICULTURE, FLORICULTURE.

Group 21.

VITICULTURE.

Class 122. The vine and its varieties—shown by living examples, by cuttings, by engravings, photographs, etc.

Class 123. Methods of planting, staking and training the vine.

Class 124. Vineyards and their management.

Class 125. Grapes for the table.

Class 126. Grapes for winemaking.

Class 127. Grapes for drying—raisin culture.

Class 128. Methods of, and appliances for cultivating, harvesting, curing, packing, and shipping grapes. Wine coöperation.

Class 129. White wines.

Class 130. Red wines, clarets, zinfandel, Burgundies.

Class 131. Sherries, madeira, port.

Class 132. Sparkling wines.

Class 133. Methods of expressing the juice of the grape; of fermenting, storing, racking, bottling, and packing.

Class 134. Brandy of all kinds; methods and apparatus for the production of brandy.

ARRANGEMENT OF ORCHIDS.

Class 135. Literature, history and statistics of viticulture.

Group 22.

HORTICULTURE.

Class 136. Garden vegetables and their cultivation. (See also groups 4 and 5.)

Class 137. Market and truck gardening.

Class 138. Esculent vegetables.

Class 139. Garden tools and other accessories of gardening.

Group 23.

FLORICULTURE.

Class 140. Hardy perennials, flowering shrubs, etc., other than roses, rhododendrons, etc.

Class 141. Roses of all varieties.

Class 142. Rhododendrons, azaleas and wild flowers.

Class 143. Orchids and orchid houses.

Class 144. Ornamental leaf plants.

Class 145. Bedding plants and annual flowering plants, ornamental bulbs, etc.

Class 146. Flower and seed trade. Methods of testing vitality of seeds.

Class 147. Cactaceae.

Class 148. Aquatic plants and their culture. Nymphaea, etc.

Class 149. Cut flowers and florist's work.

Class 150. Floral designs, etc., bouquets, preserved flowers, leaves, seaweeds. Illustrations of plants and flowers. Materials for floral designs,

bouquet materials, bouquet holders, bouquet papers, table decorations.

Class 151. Receptacles for plants, flower pots, plant boxes, tubs, fern cases, jardinières, etc. Window gardening, plant and flower stands, ornate designs in iron, wood and wire.

Group 24.

ARBORICULTURE.

Class 152. Ornamental trees and shrubs. Methods of growing, transplanting, etc.

Class 153. Fruit trees and methods of rearing, grafting, transplanting, pruning, etc., means of combating insects and other enemies.

Class 154. Nurseries and nursery trade.

Group 25.

POMOLOGY.

Class 155. Fruits of temperate and sub-tropical regions, as apples, pears, quinces, peaches, nectarines, apricots, plums, grapes, cherries and melons; cold storage and other methods of keeping, packing and shipping. (For grapes see viticulture, group 21.)

Class 156. Citrus fruits—oranges, lemons, etc.

Class 157. Bananas, pine apples and other tropical fruits except citrus fruits.

Class 158. Small fruits—berries, etc.

Group 26.

APPLIANCES AND METHODS OF HORTICULTURE, FLORICULTURE, ARBORICULTURE, ETC.

Class 159. Hot houses, conservatories. Methods of construction, management and operation.

Class 160. Heating apparatus for hot houses and conservatories.

Class 161. Hotbeds, forcing and propagating houses and appliances.

Class 162. Seats, chairs and adjuncts of garden and conservatory.

Class 163. Ornamental wire work, trellises, fences, borders, labels for plants and trees, etc.

Class 164. Garden and nursery administration and management. Horticulture, floriculture and arboriculture as arts of design and decoration. Laying out gardens. Designs for the laying out of gardens and the improvement of private residences. Designs for commercial gardens, nurseries, graperies. Designs for the parterre. Treating of water for ornamental purposes: cascades, fountains, reservoirs, lakes. Formation and after-treatment of lawns. Garden construction, building, etc. Rock work, grottoes. Rustic constructions and adornments for private gardens and public grounds. Planting, fertilizing, cultivating and appliances.

Arrangement of Orchids.

The illustration is engraved from a photograph sent us by Mr. H. H. Battles, Philadelphia. The flowers are arranged on a lath wound with sphagnum moss.

Cyperus in Decorations.

In none of the descriptions of decorations have I seen mention of cyperus being used. We use it considerably, preferring it to ferns where narcissus, freesias, lilies or callas are used. The cyperus is very durable, lasting for days. It will grow in any greenhouse and can be grown in large clumps or single plants in 2½-inch pots. It is also valuable in summer and fall for gladiolus decorations. C. B. W.

Rose Propagation in the South.

The propagation of the rose in the southern states is a matter of paramount interest to all southern florists as the many methods devised for this purpose by growers in other climates do not work successfully here. The budding and other systems of propagation so successful with European florists on account of their cool summers and attendant atmospheric moisture cannot with profit be pursued in the south; the consequence is that all other methods are abandoned in favor of the system of propagation by cuttings, which is most successful in the south, as well as the north, and is the great system of propagation in which all American cultivators exceed the growers of other countries. The propagation of the rose in the north can be carried on both in summer as well as in winter, thus giving an extended time for the performance of this operation that southern florists do not enjoy. The great length of our summers and the extreme dryness of the atmosphere renders summer propagation impracticable in the southern states, it is therefore only through the few short months of winter that we have, that any average amount of success can be obtained. The system of summer propagation so successful in the north can with some advantage be practiced in the south but only during a few of the fall months. From the middle of September to the middle of November is generally the best but much depends upon the particular locality as a later period than this might be better further south of this point. The object is to await the cool bracing atmosphere that invariably comes at that season, which is most conducive to successful propagation.

The details of propagation whether in winter or summer are in the main the same. The only difference is the bottom heat supplied in the propagation houses by the pipes and boilers through the winter months must be obtained from beds of fermenting material practiced during summer or fall. These beds are best made about the end of August or beginning of September in some out of the way place and filled in with stable or horse manure that will heat to a depth of from 24 to 30 inches; it must be firmly beaten down, and about 4 inches of sand placed on top of this which must also be made as solid as possible by beating it with a mallet or brick. A layer of nice clean straw placed on top of the manure before the sand is put on will afford good drainage for the sand that will prevent it from getting too wet from the frequent sprinkling and syringing the cuttings require. The sash should slope to the north, and posts must be placed in the ground around the bed to nail slats to for the support of the shading which must be tacked on all over the bed so as to completely obscure the direct rays of the sun. An opening in the shading may be left in the north side of the bed where you may pass in and out to attend to the sprinkling and ventilation of the cuttings. Have the shading sufficiently high so that you can walk under it

around the bed, as it is more convenient and allows of a greater circulation of air between the shading and the glass, which will result in keeping the top heat at a temperature more conducive to the welfare of the cuttings. After the bed is first made it will become very warm, but the cuttings must not be put in until the temperature has fallen to about 70°.

When the beds are duly prepared, the first act of importance is the proper selection of the cuttings; if these are not in the proper condition no amount of other attention will make marketable plants of them. The young shoots of the rose is what is to be used, but it must be hard and woody. Avoid a soft pithy growth, as much as you would an old or hardened one. When a rosebud is developed enough to cut, the shoot on which it grows is in a proper condition to make desirable cutting wood as well as all other wood of a similar development. Each leaf of the shoot with its bud at the axil, and two or three inches of a stem makes what is known to the trade as a one-eyed cutting. They are simply made by making one rather slanting cut between the joints or about a quarter of an inch above the eye. About one-third of the leaf is cut off, mainly to admit of more cuttings being put in the cutting beds or benches. If by any reason the leaf is taken off, a rose cutting in this condition will never make a satisfactory plant, or if from any cause the leaf drops off while the cutting is in process of rooting very few if any will make satisfactory plants. Some years ago especially so in the country, a popular error existed that a joint should be retained on the extreme end of the cutting; this would necessitate two joints on the cutting, one on the top and one on the bottom, which is a great waste of cutting wood, a serious objection where new kinds are being propagated and cutting wood scarce, as with the two joint system it takes as much wood to make one cutting as would make two with the one-eye system. At the end of the cutting has nothing to do with its rooting; of course it will root with the joint on the end but it will root just as well without the joint being there at all. The best plan is to cut them all of a uniform size regardless of the eyes; with some varieties good sized cuttings can be made with one eye while with other close jointed varieties two or more joints will be necessary to get a cutting of fair size. After the proper selection of cuttings they are inserted in the beds in rows in clean pure sand. No mud or vegetable matter of any kind, or soil of any description is allowed among the sand. Clean gritty sharp sand is best. With close attention as to sprinkling and keeping up a proper degree of atmospheric moisture, roses will under these circumstances root in about twenty or twenty-five days when they should be potted up in 2-inch pots using a compound of nice fibrous loam with a little sand added. Shading will be necessary for some time after potting and the same close attention as to moisture and sprinkling should be maintained as when in the cutting bed.

The indoor propagation through November, December and January can be very successfully done in the south, the details in the operation are the same whether for indoor or hot bed propagation. Use fresh sand for each batch of cuttings and keep the temperature of the sand at from 60° to 65° with the temperature of the house a few degrees less. A good deal of the trouble complained of in the south as to the leaves dropping off in a short time

after the cuttings are put in is due to the imperfect condition of the wood from which cuttings are made. When the wood is old and hardened the cuttings will invariably shed their leaves in the cutting bed. It is on this point that the southern rose grower has most to contend against—the lack of suitable cutting wood. Our summers are so long and dry that all growths are necessarily more hardened than if grown further north and consequently less liable to root and make vigorous plants. In proof of this the writer used one season a few thousand cuttings secured from a northern grower that were placed in the same bed and subjected to exactly the same treatment as a like number of cuttings cut from one of our houses here that was grown on through the summer to produce cutting wood. The result was more than 80 per cent. of the northern cuttings made satisfactory plants while scarcely 60 per cent. of the home raised cuttings made vigorous plants.

In the open air as far south as Savannah, Ga., Louisiana, Florida and the lower portion in Mississippi and northern Texas, roses can be propagated from October to January. For this system ripened or hard wood may be selected and in this case the cuttings are usually made larger, generally with three or four eyes and placed in a trench deep enough so that not more than one or two eyes will show above the ground. Make the soil firm around them so as to exclude the air. The cuttings may be set in the trenches about four inches apart and about two feet between the rows. In this way cuttings put in November will be rooted by February.

Hybrid perpetuals, noisettes, and some of the stronger growing teas only are propagated in this manner; the weak growths of many of the varieties of the teas could not be treated in this way.

Clarksville, Tenn. JAS. MORTON.

[The above is in response to queries by T. and others.—Ed.]

Springfield, Mass.

When in Springfield the other day I had only time to run out the length of Mr. C. H. Fairfield's place. It consists of eight greenhouses, span and hip-span, each 75 feet long and all in one block. They are not joined together, ridge-and-furrow fashion, but a space of three feet or thereabout occurs between them; this is the general way in places where the winters are severe and there is likely to be much snow. He grows some Wilder and Snowdon carnations, but, after this, will drop the Snowdon as its constitution seems exhausted.

Most of his houses are devoted to rose growing. He uses only four kinds, namely, Perle, Germet, Brill and Bon Silène. In the older part of the place the Perle developed many "bull-head" buds, but now they are coming in very well and perfect. He forces a good many lily of the valley, double daffodils, Roman hyacinths and paper white narcissus, and finds a market for all of his flowers in Springfield. He intends planting a lot of lily of the valley in a border against the north side of his buildings for cut flowers for Decoration Day.

His greenhouses are heated by steam and not only is he ecologicist of this method, but exceedingly well pleased with his heating apparatus. It is self-regulating with automatic arrangements, economical in fuel and easy to work. W. F.

Coming Exhibitions.

March 17-20, Philadelphia.—Spring exhibition Pennsylvania Hort. Society.

March 25-26, Montreal.—Spring exhibition Montreal Gardeners' and Florists' Club.

March 31-April 3, Boston.—Spring exhibition Mass. Hort. Society.

April 7-11, New York.—Spring exhibition New York Florists' Club.

April 14, Los Angeles, Cal.—Rose show Southern California Floral Society.

April 16-17, Syracuse, N. Y.—Spring exhibition Central New York Hort. Society.

May 6-8, San Francisco.—Annual flower show California State Floral Society.

June 6, Boston.—Rhododendron show Mass. Hort. Society.

June 23-24, Boston.—Rose and strawberry exhibition Mass. Hort. Society.

September 1-4, Boston.—Annual exhibition of plants and flowers Mass. Hort. Society.

September 15-17, Boston.—Annual exhibition of fruits and vegetables, Mass. Hort. Society.

November 3-6, Boston.—Chrysanthemum show Mass. Hort. Society.

November 10-13, Philadelphia.—Chrysanthemum show Penna. Hort. Society.

News Notes.

NEW ORLEANS.—Mr. R. N. Little, the florist, has four seedling roses which have received some favorable mention. He has named them: Souvenir of Beauvoir House, Miss Winnie Davis, Miss Mildred Lee and Fla. Field.

READING, Pa.—In the Reading *Eagle* of February 14, among the notices under the head of "Properties sold by the sheriff," appears the following: "Dwelling and greenhouses and lot 221 by 130 feet, at 2nd and Douglas, estate of Joseph B. Moore to Felix P. Kremp for \$6,750."

LA CROSSE, Wis.—Mr. E. Kirchner, for the past five years gardener to Hon. J. C. Easton of this city, has resigned his position and will build greenhouses and start in business for himself at Winona, Minn., at once. Mr. Kirchner is an A 1 florist and will undoubtedly make a success of the business at Winona.

KEOKUK, IOWA.—Peter Sutherland died recently of paralysis, in his 73d year. He was a native of Scotland, came to America in 1849 and settled near Cincinnati where he carried on the business of market gardener until 1856 when he removed to this city and established himself as a florist and market gardener. He was respected and esteemed by a large circle of friends. He leaves a widow, two sons and three daughters.

LANSING, MICH.—The spring term of the Agricultural College opened February 21 with a full attendance of old students and about thirty new ones the latter including a number of young florists who will take a course in floriculture under the supervision of Mr. Louis Knapp. Prof. Taft, of the Horticultural Dep't., with the other professors of the Agricultural Dep't. have returned after holding a series of twenty-six institutes in various parts of the state, in which much good work was accomplished.

SOUTH BEND, IND.—Mr. Robert Miller, formerly gardener for Mr. Studebaker, has associated himself with Mr. August Beyer, the florist, and the two will con-

duct a commercial business under the firm name of Beyer & Miller. They will continue the greenhouses heretofore conducted by Mr. Beyer on the outskirts of the city, and in addition have built a down town store 26x50, connected with which are two conservatories, one 20x38 and the other 40x38. They should be added to the directory list as F.

MINNEAPOLIS.—The semi-annual meeting of the Society of Minnesota Florists will be held at the West Hotel this city March 4. The programme includes essays on chrysanthemum exhibitions, fertilizers for greenhouse plants, carnations, pansies in cold frames, botany relating to plant culture, violets, roses and other subjects of trade interest. Two questions which will be discussed are: "Are the high prices during the Holidays of benefit to the trade?" and "what may be considered fair prices for spring plants?" Space will be provided for a display of flowers and small premiums are offered for best baskets of flowers and best display of cut flowers. The printed programme may be had on application to the secretary, Mr. Gust. Malmquist, Minneapolis, Minn.

OAKLAND, CAL.—James Hutchison, the well known florist died suddenly February 13 of heart failure. James Hutchison was one of the pioneers of Oakland. He was a native of Scotland, and at the time of his death was 66 years of age. He came to California in 1852, and in 1863 he came to Oakland and began the florist business. He established his nursery on Telegraph avenue at 26th street. He purchased the property at the corner of 14th and Washington streets, and there he established his store. His business grew, and his land increased in value until he became quite a wealthy man. For a number of years past H. M. Sanborn has conducted most of his business, and about a year ago Mr. Hutchison went to Europe, and since that time Mr. Sanborn has conducted the business almost exclusively, recently succeeding to the business as previously announced in these columns. Mr. Hutchison leaves a wife and an adopted daughter, but no children.

LOS ANGELES, CAL.—The following programme and list of essays for the remainder of the current year is announced by the Southern California Floral Society: March 9th, Plea for Window Gardening by J. H. Tomlinson; March 23, Roses by C. E. Brydges; April 6, business meeting; April 13, opening of the society's spring exhibition at Hazard's pavilion; April 20, regular bi-monthly business meeting; May 4, Orchids by J. C. Harvey; May 18, Forest Trees by W. S. Lyon; June 1, Methods of European Flower Culture by Gustave Brose; June 15, Progress of Floriculture in Southern California for the past five years by Eli Snyder; June 29, Hints on Fruit Growing by Thos. Chisholm; July 13, Bulbs by S. P. Wakelee; July 27, Pansies by Wm. Barclay; August 10, Grasses by James H. Denham; August 24th, Chrysanthemums, by J. Leithead; September 7th, Eucalypti, by W. G. Ward; September 21st, Palms, by Louis Legrand; October, 5th, Gardening for Profit, by S. E. Combs; October 19th, Annuals, by John Franklin; November 2d, meeting of management committee in the rooms of Hazard's pavilion, Los Angeles; November 24, opening of the society's fall exhibition at Hazard's pavilion; November 16th, regular bi-monthly business meeting; November 30th, Ferns, by C. H. Hovey; December 14th, How to

Stock and Grow the Contents of a small Conservatory, by J. C. Harvey; December 28th, Seedling Carnations, Dahlias and Roses, by J. Haetzel.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany payment. Plant ads not admitted under this head.

SITUATION WANTED—By a practical florist, in a private or commercial place. 10 years experience. No. 1 references. Address **W. C. CARLSON, Florist, Chicago.**

SITUATION WANTED—By a first class florist, 35 years experience, either as foreman, under manager or position in store. No. 1 decorator and maker up. Good references. Address **care Jordan Floral Co., St. Louis, Mo.**

SITUATION WANTED—By a first class florist, responsible position; 4 years experience. Good rose and cut flower grower; understands all kinds of general stock of greenhouse plants. References. Address **FLORIST, 717 FAGE ST., Toledo, Ohio.**

SITUATION WANTED—By a reliable assistant, single, in a greenhouse and vegetable garden, wishes situation by middle of March, either private or commercial place. Address **Wm. J. Taylor, New York or Washington, Can. mtl.** Good references. Address **G. F. Valley Forge, Chester Co., Pa.**

WANTED—Two private gardeners, (one commercial) for 1000 acres of land. Address **VACAGHAN'S SEED STORE, Chicago.**

WANTED—A young, unmarried man, with good knowledge of general greenhouse work. References required. Address **MRS. M. E. KEATON, Lyons, Iowa.**

WANTED—A young man as assistant in a flower store in Chicago. State amount of wages per week and name of last employer. Address **H. care American Florist, Chicago.**

WANTED—Competent commercial florist; good place to the right man; liberal wages paid. Address with name and references. Address **EDW. WACHENDORFF, Atlanta, Ga.**

WANTED—Young man for nursery work. Must thoroughly understand the propagation of all kinds of shrubbery, ornamental trees, etc. Give wages expected. Address **B. A. ELLIOTT Co., Pittsburg, Pa.**

WANTED—A practical gardener, thoroughly posted in vegetable growing. Also a man to work in peach nursery, and good honest workmen need apply; permanent place for both. Address **R. G. NICHOLSON, Chestertown, Md.**

Will be sold for cash at a low figure. Proof of references. Business for 20 years, established over 30 years. Address **NCUSERY, care Am. Florist.**

Another Remedy for Mildew on Roses.

That mildew mixture of so many pounds of sulphur, so many of lime, so many gallons of water boiled together in an iron pot, with an awful smell, is really first rate for cure and prevention of mildew, but it is troublesome to make and after spraying a few times the foliage looks as though it had been spattered with weak white wash.

By using another alkali, caustic potash, which is readily procured, at any grocery we can make a sulphur compound in a few minutes with very little trouble, that is a sure cure of mildew and does not whitewash the foliage.

To make, procure a can of caustic potash (it is often called concentrated lye, saponific, etc.); be sure to get a kind that is already in small pieces, as that in one solid lump would be unhandy. Take, say a 3-inch pot full of flowers of sulphur, put in an earthenware vessel, moisten with water and stir until it becomes a pasty mass and every particle of sulphur is wet, then add three or four heaping teaspoonfuls of caustic potash, stir again and it will rapidly assume an orange-brown color, become very hot and turn liquid, now stir in about a pint of water and it is finished.

One tablespoonful of this to a gallon of water will be about the right strength for spraying, if too strong it injures the young foliage. When mildew has gained a foothold syringe every day until cured, but as a preventive once, twice or three times a week, according to the weather, will keep the foliage perfectly clean. Have used for over three years without having a failure.

THE NEW ROSE WABAN.

This very valuable rose originated at the Waban Conservatories of E. M. Wood & Co., Natick, Mass. It is a SPORT from Catherine Mermet and identical with that variety in every characteristic, excepting color, which is a rich, deep, BRIGHT PINK; it sustains the same relation to its parent as Duchess of Albany does to La France. The only objection to C. Mermet is it is frequently pale, insipid color in cloudy weather; experience has shown that the WABAN retains its deep rich color in all kinds of weather; it will, without doubt, prove to be as valuable as THE BRIDE which is also a sport from the same magnificent variety.

IT HAS ALREADY RECEIVED THE SILVER MEDAL

of the Massachusetts Horticultural Society; of the Pennsylvania Horticultural Society, and Certificate of Merit from each of the Societies in this country and Canada where it has been shown.

READY FOR DISTRIBUTION ON APRIL 15th, 1891.

ORDERS BOOKED NOW, WILL BE FILLED IN STRICT ROTATION.

HOW TO COOK VEGETABLES is the title of a book of 182 pages received from W. Atlee Burpee & Co., Philadelphia. It is written by Mrs. S. T. Roger, Principal of the Philadelphia Cooking School and treats the subject comprehensively. She gives 40 ways of cooking potatoes, 26 of tomatoes and 22 of corn, 28 ways of making soups and 37 recipes for salads. Directions are also given for pickling and preserving. The book is not sold but is given as a premium on seed orders by the publishers.

DO NOT FAIL to give your name and address when sending us communications. You may sign your notes for publication with an initial if you wish, but we positively must know whom the notes come from. And give your name and address with each communication. We have a pretty long memory, but it is not long enough nor broad enough to remember the address of each one of our army of occasional correspondents.

WE PROTECT our readers from advertisers whose business methods are questionable by excluding such advertisers from our columns. By this means we also protect our advertisers from the competition of irresponsible parties who promise the earth and fulfil their obligations with wind.

A FINE PHALÉNOPSIS.—F. G. F. sends us a note regarding the plant of Phalenopsis Schilleriana described by "E" on page 498 of last issue, being evidently unaware of the fact that a description had already been sent us.

IN THE DIRECTORY change Thomas Waterworth from South Braintree, Mass. to Braintree, Mass. As he is the only one under the head of South Braintree, simply cross the "south" off the name of the post office.

WILL B. who sent us some notes from Providence, R. I., please give us his name and address. We should be glad to use his notes, but do not care to do so, without having some information as to the writer.

QUITE A NUMBER of very interesting articles were unavoidably crowded out of this issue owing to unusual pressure upon our columns. All will appear soon.

WHEN WRITING to our advertisers please do not fail to state that you saw the advertisement in the AMERICAN FLORIST.

WE HAVE in hand a very spicy letter from Mr. Lombard in reply to Mr. Chitty, which will appear in next issue.

SEND your advertisement early for our double Easter number, to be issued March 19.

Catalogues Received.

Dickman, St. Louis, Mo., seeds.

Hot Water Under Pressure.

I see in the issue of the AMERICAN FLORIST of January 29 that C. A. D. of Macon, Ga., advises the use of water in 2-inch pipe under pressure for greenhouse heating. As I am thinking of building I would ask C. A. D. as a favor to answer through the columns of your valuable paper the following questions:

First, how many pipes should be used compared with 3 or 4-inch, to obtain the same temperature?

Second, how would the apparatus work with the water pipe connected with the return for a feeder and expansion? We have about 30 feet head.

Third, should the connection be made near the boiler or at the extreme end?

Fourth, does that system require less fuel than steam or large pipe?

SUBSCRIBER.

Steam Heating.

In reply to M—in regard to steam heating, page 474. If the house is properly piped on the gravity plan the whole system will fill with steam in any weather without showing an ounce of pressure.

Place the boiler where most convenient, as there will be the same amount of radiation exposed; condensation will be the same, or very nearly so, whether the boiler is placed at end or midway of houses.

Would prefer 1½-inch pipe, but if I had 1-inch on hand should use it.

A gravity steam system properly equalized will return all condensation to the boiler with air cocks closed when working on a vacuum which is a most essential feature.

C. D. PORTER.

Jamestown, N. D.

A Model Rose House.

Mr. J. A. Budlong built at Bowmanville, Ill., near Chicago, last fall a rose house which is a decided novelty in this section of the country, and is worthy a description in your columns. Its dimensions are 30x300 feet, three quarter span roof, continuous ventilation, glazed with

16x24-glass. The roof structure is cypress and very light, bars are channeled for drip. The west end of the house is 3 feet 6 inches higher than the east end and the benches incline to the south 2 inches in the width of the house.

Steam heat is used and the grade of the house gives a very free and rapid circulation. All coils are the full length of the house and, notwithstanding their extreme length, work perfectly. The tubular boiler is set high and dry, the water line being about six feet above the lower radiating pipes, condensation being returned to boiler by a receiver and steam trap, which operates automatically. This plan does away entirely with deep boiler pits which are inconvenient and expensive and generally full of water at just the wrong time.

The house was completed too late to plant last season, but will be stocked soon with the best forcing varieties and the writer believes will cause a radical change in the method of building rose houses in future.

Several crops have been grown in it since its completion and the fact has been demonstrated that the temperature can be regulated from one end of the house to the other to a degree. It can be run with equal facility at 40° or at 70°. The water service is most complete, being pumped by steam to a 300-barrel tank elevated 45 feet and can be heated to any required temperature by steam coils. Altogether the house is a model one and must be seen to be appreciated. NEMO.

OAKLAND, CAL.—In the condemnation suit of the city of Oakland versus florist Edward Gill a consent judgement has been entered. The suit was to condemn Mr. Gill's property for the opening of a street. Judgment of condemnation was ordered for the city and \$9,968 damages for Mr. Gill. The land is valued at \$2,204 and improvements, including flower and shrubs, at \$7,679. Of the flowers \$5,000 is charged for camellias, marguerites, \$764; roses, \$300. Mr. Gill sued for \$15,000. The commissioners originally allowed him but \$3,000, and nothing for the improvements.

WHEN YOU WRITE an advertiser tell him that you saw his advertisement in the AMERICAN FLORIST.

More About the Prize Adv. Contest.

PHILADELPHIA, Feb. 17, 1891.
EDITOR AM. FLORIST.—In answer to your inquiry of the 9th inst. asking which one of the several very original advertisements submitted by a member of your staff was accepted by us and awarded the "honorarium" of \$5 as announced in our last article, we take pleasure in giving you below a printed copy of a portion of this advertisement:

ALL LIVE SEEDS

Will grow if properly cared for, but some are **better than others**, just as strong, healthy children are more likely to develop into active and useful men and women than weak, puny ones.

BURPEE'S SEEDS

Are not only alive, but full of vitality—**pure and true to name**. They are **tested**, before being sent out, and if any are found to lack vitality they are destroyed.

In our opinion the heading "All Live Seeds" and the wording which follows are both most excellent. While too late for us to make much use of this material this season we purpose using it quite extensively next year.

Another advertisement received from your office that is decidedly original in its conception is the following:

"Every good seed contains a little

LIVE BABY PLANT,

Tightly but safely wrapped up in a shell, the infants were filled with albumen or starch upon which the baby feeds until it can draw sustenance from Mother Earth. Seeds containing live baby plants of the breeds most useful, helpful and pleasing to mankind, can be had from

W. ATLEE BURPEE & CO., PHILADELPHIA.

Their Farm Annual for 1891, which tells all about their seeds, will be mailed free on application.

Properly set up in suitable type, well displayed, this would undoubtedly be a very striking advertisement, and perhaps we are too conservative in objecting to it as rather bordering on the sensational. Permit us to say that one of the most agreeable features connected with the prize contest has been the interest taken in it by editors and also by professional writers of advertisements:—you will notice among the list of awards, given in our last letter, the name of Mr. S. M. Pettigill, the veteran advertising agent of New York, who is now writing such as interesting series of articles on his life long experience with extensive advertisers.

Another interesting feature of the contest has been the good will shown by a number of correspondents who while not submitting designs in competition for the prizes, freely wrote their views relative to advertising and gave their honest criticisms upon our advertisements, and also of our catalogues. Among these were many good ideas that will make material to write quite a series of articles presenting new methods of advertising, of some of which we may give the AMERICAN FLORIST an outline later. Since the advertising contest closed with 689 advertisements we have received quite a number of others which arrived too late for competition.

Among no many advertisements of seed

there were, of course, all sorts, many in verse and many of a comic nature, which while often bright and effective were hardly consistent with the dignity of a house seeking the trade of substantial farmers and gardeners.

Several suggested representing our name by a rebus of a chestnut burr and a pod of peas—(BURR-PEAS). The "taking" quality of a catch phrase in the minds of the contestants was prominently shown by such phrases as "WE supply the seeds, YOU gather the crops," "you plant them, THEY grow,"—"Burpee's Seeds will grow,—you do the rest,"—"Burpee's Seeds are the best and go farthest,"—"We pay the postage."

SOME CURIOUS CONCEITS.

Among the striking and sensational headlines suggested by different competitors are the following:

"BURIED HOPES—"

Plant Burpee's Seeds and your expectations will be rewarded by realization."

"WE ARE NOT GOING TO SEED—The earth, though we have facilities."

"YOU WANT THE EARTH, Only a little of it though to prove our assertion that we sell good Seeds."

"AN ORANGE and

AN ONION

will not taste alike grown from our Seeds."

"YOU CANNOT KEEP THEM DOWN."

"ALWAYS COME UP."

"A NEW JACK AND HIS BEAN'S TALK."

"LETTUCE HAVE PEASE."

"POVERTY MAKES A MAN SEEDY."

"BURPEE'S SEEDS ALWAYS COME UP—"

Those who use them once always come back for more."

Another contestant heads his advertisement with a picture of a moon and the query "WHY IS THE MOON SO BARREN?" is answered "Because its inhabitants cannot get Burpee's Seeds."

Another suggests that "Our seeds are none of the tired kinds that have been lounging on the counters of the corner groceries for the past decade, but are fresh as a country maiden and as pure as spring water—true to name and sure to grow. To know what kinds you want, how to plant and how to cultivate seed for Burpee's Farm Annual for 1891."

The vitality of the seeds seems to be in the minds of most competitors the chief point to bring out in an advertisement. One contestant in Shelbyville, Ill., heads his advertisement in bold type with the announcement that

"SOWN IN THE DARKNESS

OR SOWN IN THE LIGHT

They always grow."

W. ATLEE BURPEE.

J. LELAND FOGG has removed to Cedar Rapids, Iowa, from Chicago.

ROCHESTER, N. Y.—Mrs. Chas. Vick is now visiting Cuba with friends and will go to California via Mexico, and return in the spring. Morehouse & Cobb have dissolved. Mr. Morehouse continues the business.

—A—
Wide-Awake Man

With a supply of Burpee's Seeds has this much in his favor—he starts right. That's half the trouble over. A farmer can plow, harrow, and take all manner of pains in his work with some enthusiasm if he knows that he is tickling the earth to make really good seed laugh into harvest.

Burpee's Seeds

Are all tested. It is known that they hold a hearty germ before they are sent out. Like the good man who is judged by his deeds, each package of Burpee's Seeds is its own recommendation. If you haven't tried them you are the man to whom the following offer is made. This is for an introduction; may the acquaintanceship ripen.

For 25c we will mail you one full size packet each of the new **Vandergraw Cabbage** in cultivation; **Burpee's Hard-Head Lettuce**, hardest heads of finest flavor; the **Delaware Watermelon**, the sweetest of all large Watermelons; **Burpee's Red Bird Pepper**, distinct novelty; mild **Peppers** borne erect; and the **Matchless Tomato**, the largest solid, smooth Tomato. — Purchased separately, these 6 packets of seed would cost 60 cts. but we will send the entire collection for 25 cts., or 5 complete collections for \$1. If you do not want all of these 6 varieties you can select any 3 for 15 cts. (4 two cent stamps.) Write to-day and ask for

Burpee's Farm Annual for 1891, with colored plates painted from nature, tells all about the **Best Seeds** including rare novelties, which cannot be had elsewhere. It also tells how to get **Valuable Premiums**, including **MRS. RORER'S NEW BOOK**, just out, **Free.**

GOLDEN BEAUTY TO THE FRONT.

It was never exhibited, but has stood the more
practical test, for no early yellow Chrysanthemum
gave better satisfaction to seller and buyer than the
above. Such was our experience, and also of all
who handled it. What they say.

"We handled no early yellow that sold better or
gave better satisfaction to the buyer."—James Car-
ledge, of Pennock, Bros., 1514 Chestnut street, Phil-
adelphia, Pa.

"You can get nothing better than that."—Wm.
Voght, Jr., 5th and Cooper Sts., Camden, N. J.

It was described in these columns last year, and
we leave it to tell its own story. Suffice it to say
that our claims for it have been more than sustained,
and that it combines all the essentials of a first class
market variety for potting and cutting. Ready in
quantity March, April and May. 12 for \$1.00 for
\$8. You can not afford to get left on this offer.
(Orders booked now are filled in rotation as far as
plants are ready, by express or free by mail.)

THE NEW DOUBLE WHITE DAISY SNOWFLAKE.
One of the best things out for winter flowers.
Will grow and bloom all winter in a cold frame, and
it will covered cold nights will need no better quar-
ters. Gives splendid returns. It does not seed, and
can only be increased by division. Flowers pure
white, very double, and beautifully quilled. As
large as a 50c. piece. Ready now. 12 for \$1.00 for
\$8. Sample plant and bloom free by mail on receipt
of 10 cents.

See other special offers in another column.

HARDY PLANTS.

We are headquarters for every-
thing new and desirable in hardy
plants and our stock the most extensive in America, and our prices the lowest.
There is a rapidly growing demand for this class of plants, and the florist who
fails to stock up with them will lose considerable and profitable business.

ROSES. We grow immense stocks of all Cut Flower varieties and are
prepared to make low prices on them, either for present
delivery or any time during Spring or Summer.

NEW ROSE WABAN. We can say for this rose that it is all that is
claimed for it, and a great addition to the
varieties of Cut Flower Roses. We will have a splendid stock of it to offer at
established prices.

WHOLESALE CATALOGUE IS NOW READY and will be
mailed free to all florists. Our
Retail Catalogue is admitted to be the finest and most instructive published. We
charge 25 cts. for it, but send it to florists on receipt of 10 cts. to cover postage.

healthy, labeled, and well rooted.

ALEX. MCBRIDE, ALPLAUS, NEW YORK

Failure of Lilium Harrisii.

I note the query on page 410 of the AMERICAN FLORIST for January 29 regarding the failure of Lilium Harrisii.

Can the bulbs of Lilium Harrisii which did not start at all be dormant bulbs? It is a well known fact that with some bulbs and tubers, individuals are found which although remaining in a good state in the ground and pushing even sometimes roots, do not produce buds or stem, but remain dormant in the ground till the following year, when a natural growth is observed. Such are the underground parts sometimes of Ranunculus asiaticus varieties, of Geranium tuberosum, of Tropaeolum discolor, azurum and others and this too, not infrequently happens with Lilium Brownii. Here instead of the usual bud is only found the first year an agglomeration of young cells from which the next year the bud seems to be developed.

We do not remain to have found a similar condition in any other lily, so it would be of some interest to know whether Lilium Harrisii has also the same propensity to become sometimes dormant.

J. H. KRELAKE,
Haarlem, Holland.

If you have anything to sell to florists don't fail to advertise it in our special Easter number of forty pages, elegantly illustrated, and with a number of other special features. No increase in advertising rates.

Zirngiebel's Improved Strains

WHITE ASTERS, PERPETUAL WHITE STOCKS, GIANT MARKET and FANCY PANSIES; NEW HYBRID CARNATIONS, a cross between the Perpetual and Marguerites, and greatly superior for florists' use, in separate colors, pure yellow, white, pink and red shades. Any of the above seeds in trade packets at \$1.00 each.

Also the choice NEW CONTINENTAL CARNATIONS for 1891. Miss Moore, Mme. Gobet, Roi des Violettes, Bouton, d'Or, Geanne Michel, to be sent out March next.

White Day Lilies. \$10 per 100
Dahlias, fine assorted whole roots. 8 "
Amarylilis Johnsonii, stock limited, 30 to 40 each.
McCREA & COLE, Battle Creek, Mich.

THE LATEST AND GRANDEST NOVELTY OUT.

NELLIE LEWIS CARNATION.

Flowers very large and full, and of a color never before seen in Carnations — AN EXQUISITE SHADE OF PINK.

W. J. PALMER & SON,
Florists of Buffalo, N. Y. say:

"I had an opportunity of seeing Nellie Lewis Carnation in full bloom on Jan. 16th, and a grand sight it was. I consider it a better and finer Pink Carnation than Grace Wilder. Though the flowers do not demand \$1.00 each as we read about of late, they will get there just the same."

For decorative purposes and corsage bouquets, they are unsurpassed. A bowl filled with them used at a dinner a short time ago, lighted up the entire table. Don't fail to place your order at once, as we control the entire stock and have only a limited number of plants.

Price, Rooted Cuttings, per 100, \$10.00.

Plants, 2-in. pots, per 100, \$12.00.

VICK'S SEEDS NEVER DISAPPOINT, is the verdict of the millions who have planted them.

VICK'S FLORAL GUIDE for 1891, contains over 100 large pages, hundreds of illustrations, colored plates, Best Novelties, all worthy of cultivation; \$1.00 and \$2.00 cash prizes. Price, 10 cents, which deduct from first order and it costs NOTHING.

Butted Glass in Glazing.

I note Mr. Chas. Everding's mention of butted glass in glazing greenhouses on page 454, No. 141 of the AM. FLORIST, and wish to say that he goes to unnecessary trouble when he uses sheet wadding to stuff between glass and cap. I have been using butted glass several years and have 15,000 feet glazed in that way. There is no leakage and I will pay a premium for every pane found rattling in the wind. I send a drawing of the sash bar and cap used. The glass is 16x16. The caps are attached to the sash bars by 1 1/2-inch, No. 8, round head screws, one screw in the center of each pane. The glass is laid without any putty and screwed down tight enough to make the head of the screws sink well in to the cap. This method of glazing will give you a roof that will not cause any drip on the benches and is much better in every way than a roof glazed by laying the glass in putty. Brampton, Ont. H. DALE.

Fungus in the Cutting Bench.

In regard to the question about fungus in the cutting bench I would suggest that the trouble is in the temperature and not in the sand. If the overhead temperature is kept from 50° to 60°, with bottom heat 10° to 15° higher you will not be troubled with fungus and will have healthier cuttings. JOSEPH KIFT. West Chester, Pa.

TRADE LISTS published in the AMERICAN FLORIST are bound in with the paper and are of permanent value. Of those which reach the trade otherwise many go into the wastebasket, and some into an obscure pigeon-hole. Which way are you going to circulate your trade list?

HENRY SMITH, 130 Monroe St., Grand Rapids, Mich.

The Street Fakir.

Some maintain that the sale of flowers on the street by the fakir injures the florist's business, and some hold that it does not. Does the street fakir who sells flowers injure the florist's business any more than the fakir who sells notions injures the dry goods men? The fakir always deals in second class stuff and the majority of the people who buy of these street peddlers would not go to a first class store to buy choice cut flowers. I believe that but few sales are lost to the dealers by the street fakir and that through them an enormous amount of second class stuff is disposed of that would otherwise never find a market. The way to abolish the street fakir is to grow less stuff but of a better quality. Growers are too much inclined to spread themselves out under a big lot of glass and then give the big space about half the attention and work that it ought to have. The result is a lot of flowers but mighty poor ones and if the fakirs didn't sell their flowers their product never would be sold. When a grower finds the fakirs his only means of marketing his stuff it is time for him to either improve the quality of his product or quit the business, but what he generally does do is to build another range of new houses, to be handled without any increase in his working force, and thus still further lessen his chances of producing good flowers. The fakir is the only hope of the men who plant roses and reap a crop of mildew, blackspot, red spider and wind. Do not ruthlessly cut them off from all hope of getting in enough cash to pay their coal bill. It is enough that they are out their own time and the other expenses of running their bullhead factories. M.

MARCH 19 we shall issue a 40-page number, which will be most beautifully illustrated and will contain a number of special features which will make it of unusual value.

THE NURSERY BOOK

A Complete Hand-Book of Propagation and Pollination. By L. H. BAILEY,
Editor of the American Gardener.

This valuable little manual has been compiled at great pains. The author has had unusual facilities for its preparation, having been aided by many experts in many directions. The book is absolutely devoid of theory and speculation. It has nothing to do with plant physiology, nor with any abstruse reasons of plant growth. It simply tells plainly and briefly what every one who sows a seed, makes a cutting, sets a graft, or crosses a flower wants to know. It is entirely new and original in method and matter. The cuts number almost 100, and are made especially for it, direct from nature. The book treats of all kinds of cultivated plants, fruits, vegetables, greenhouse plants, hardy herbs, ornamental trees and shrubs, forest trees.

Among the contents are the following:

PROPAGATION BY SEED.
PROPAGATION BY SEPARATION.
PROPAGATION BY LAYERS.
PROPAGATION BY POLLINATION.

PROPAGATION BY CUTTINGS.

PROPAGATION BY GRAFTING. Including Grafting, Budding, Inarching, etc.

THE NURSERY LIST is an alphabetical list of all kinds of plants, with a short statement telling which of the operations described in the first five chapters are employed in propagating them. Over 2,000 Entries are made in the list.

ACER (MAPLE). *Sapindaceae*. Stocks are grown from stratified seeds, which should be sown an inch or two deep; or some species, as *A. dasycarpum*, come readily if seeds are simply sown as soon as ripe. Some cultural varieties are layered, but better plants are obtained by grafting. Varieties of native species are worked upon common or native stocks. The Japanese sorts are winter-worked upon imported *A. polymorphum* stocks, either by whip or veneer-grafting. Maples can also be budded in summer, and they grow readily from cuttings of both ripe and softwood.

PHYLOCACTUS, PHYLOCEBUS, DISOCACTUS (LEAF CACTUS). *Cactaceae*. Fresh seeds grow readily. Sown in rather sandy soil, which is well drained, and apply water as for common seeds. When the seedlings appear, remove to a light position. Cuttings from mature shoots, three to six inches in length, root readily in sharp sand. Give a temperature of about 60°, and apply only sufficient water to keep from flagging. If the cuttings are very juicy, they may be laid on dry sand for several days before planting.

GOOSEBERRY. Seeds, for the raising of new varieties should be sown as soon as well dried, in loamy or sandy soil, or they may be stratified and sown together with the sand in the spring. Cuttings, 5 to 8 inches long, of the mature wood, inserted two-thirds their length, usually grow readily, especially if taken in August or September and stored during winter. Stronger plants are usually obtained by layers, and the English varieties are nearly always layered in this country. Mound-layering is usually employed, the English varieties being allowed to remain in layerage two years, but the American varieties only one (Fig. 27). Layered plants are usually set in 107 Market St. or a year after removal from the stools. Green-layering during summer is sometimes practiced for new or rare varieties.

Price, in library style, cloth, wide margins. \$1; Pocket style, paper, narrow margins, 50 cts.

IMPROVED FARM AND GARDEN TOOLS FOR 1891.

BETTER, Both Horse and Hand, THAN EVER; better and more money saving. We can not describe them here, but our new and handsome catalogue is free and interesting. A goodly number of new tools will meet your eye there. Among these, Gardener's Harrow, Cultivator and Pulverizer, combined adjustable tools. Market Gardener's & Beet Grower's Special Horse Hoe with Pulverizer; Special Furrower, Marker and Ridger, adjustable width; Sweet Potato Horse Hoe, four tooth with vine turner; Heavy Grass Edger and Path Cleaner; new Nine Tooth Cultivator and Horse Hoe combined; Special Steel Leveler and Pulverizer combined; all interesting, nothing we have ever made so graceful or perfect. Some improved things too are grafted upon our old and famous LEVER WHEEL, instantly adjustable for depth, is a great feature; put on all '91 goods unless ordered otherwise. Nor have our Hand Seed Drills been forgotten in the march of improvement, nor our Double and Single Wheel Hoes, Garden Plows, Grass Edgers, Etc. Some of them are greatly altered for the better, yet do not forget that no novelties are adopted by us without actual and exhaustive tests in the field. We warrant our goods everything exactly as represented. Send for Catalogues now.

STANDARD FLOWER POTS

—AND—

JARDINIERS IN GREAT VARIETY.

NOTE.—Although forced to play a minor
part in the Prize Pantomime, we nevertheless
produce the best STANDARD POT in the
country, and members of the S. A. F. soon
found that to get such they must send their
orders to

A. H. HEWS & CO., N. CAMBRIDGE, MASS.

AHEAD OF EVERYTHING.

We Follow None, Prize or No Prize.

Our latest improvements in machinery produce a Standard Pot which for lightness,
smoothness and durability, has never been equalled. Customers buying of us will

SAVE ONE-THIRD IN FREIGHT.

And to prove this, we give below a table showing number in Crate and WEIGHT
of same, which speaks for itself:

Size.	No. in Crate.	Weight.
1 1/2 inch	3,000	250 lbs.
2 1/4 "	2,400	250 "
2 1/2 "	1,750	250 "
3 "	1,450	250 "
3 1/2 "	1,200	250 "
4 "	800	250 "
4 1/2 "	600	250 "

It will be seen at a glance, that our pots are one-third lighter than formerly, and yet we claim that owing to the superior quality of our clay and improved machinery, they are stronger than any pot in the market, and we frankly ask you to make the test.

Boston.

¶ The March meeting of the Gardeners' and Florists' Club was made specially interesting by the presentation to Mr. James Comley of a beautiful clock. Mr. Comley has been for many years gardener in charge of the Hayes estate at Lexington and is one of our best known horticulturalists. The gift was in token of the high appreciation in which he is held by his brother gardeners as well as an acknowledgment by the club of their indebtedness to him for his kindly co-operation with his employer, Mrs. F. B. Hayes, in inviting and entertaining the Society of American Florists at Lexington, last August. The presentation address was made by Mr. Jackson Dawson, whose words were most happily chosen and Mr. Comley's reply in accepting the gift was received with rounds of applause. The clock is of black marble with heavy bronze ornamentation, and on a gold plate on the front is this inscription, "Presented to James Comley by the Gardeners' and Florists' Club of Boston, March 3, 1891."

At the same time Mrs. A. H. Hews was remembered by the club by a present of a pretty little silver tea service, suitably inscribed in acknowledgement of her attentions to the visiting ladies last August. The business of the evening, a discussion of the question of "City Water Rates" was, owing to the time consumed by the above mentioned exercises and by various committee reports, etc., postponed until the April meeting. The semi-annual report of the treasurer showed a gratifying financial condition. A committee was appointed with power to have the club incorporated.

A gardener who is rapidly making a big reputation for his skill in horticulture is Mr. Kenneth Finlayson, gardener to Dr. C. E. Weld. His cinerarias are just now well worth a trip to Brookline to see. These as well as the superb primulas and cyclamens are all from seed saved by Mr. Finlayson. The colors and markings are magnificent, and many of the blooms measure three to four inches across. Better shaped plants it would seem impossible to obtain. The carnations and roses, in fact everything in the houses are in splendid condition. The only unfavorable feature in the whole establishment is the presence in large numbers of that much dreaded pest the "orchid fly" which has made sad havoc with the young cattleya growths and for which, so far, no remedy or preventive has proved successful. In one of the houses is a fine set of seedling geraniums from seed resulting from crosses of Cannel's new set of 1890. Some of these are remarkably brilliant in color. The circular show house at the end of the range is gorgeous with masses of Streptosolen Jamesonii, cytises, mahernias, begonias

and tulips. On the wall in the potting room are already 74 prize cards of the Massachusetts Horticultural Society all of which Mr. Finlayson has won during the past two years.

Dr. Weld's estate is beautifully situated on high ground in Brookline, the view from the greenhouses taking in the whole city of Boston and suburbs. He is one of the many private gentlemen whose generosity was so freely extended to the Gardeners' and Florists' Club when they were preparing to extend a fitting welcome to the national society.

The lecture before the Massachusetts Horticultural society on Saturday, March 7th, was by Wm. G. Farlow, professor of Cryptogamic Botany at Harvard College, on "The Diseases of Trees Likely to Follow Mechanical Injuries." The subject was illustrated by numerous stereopticon views, and proved to be very interesting, bringing out quite an extended discussion.

Jackson Dawson exhibited a very beautiful plant of his rose, a cross between Multiflora Japonica, and Jacqueminot. It formed a shapely bush about three feet high, and bearing not less than 500 buds and blossoms. The flowers are about two inches across, light rose colored and fragrant; a certificate of merit was awarded this plant.

Mr. Dawson also showed some large clusters of Andromeda speciosa and Viburnum plicatum, forced.

Pitcher & Mandia exhibited half a dozen plants in bloom of the new hardy Azalea rustica. The flowers are semi-double and of good substance. They received a certificate of merit.

Presentations seem to have been in the air for the past week. On Saturday afternoon about twenty-five gentlemen participated in a most enjoyable occasion at the Tremont House. The immediate cause of the gathering being the presentation of a handsome easy chair to Mr. Edwin Sheppard, of Lowell, by his many friends among the fraternity. The ceremony was performed in a most original and witty manner by Judge Hoitt, of Nashua, who had the recipient comfortably seated in the chair and wondering what was the matter before he informed him of his good fortune.

Mr. Sheppard was taken by surprise, but was soon able to express his appreciation of the compliment and thank the donors. After the presentation, the company sat down to an appetizing repast, and with speeches, stories and songs the evening passed most pleasantly away. The honors in story telling were divided pretty evenly between Jackson Dawson and Judge Hoitt, while Warren Ewell and James Comley were easy winners in the singing contest. Mr. M. H. Norton having recently received a present of a large pickerel, which is a fresh water fish, in whose capacious stomach was

found a herring, which is a salt water fish, has been cudgelling his brain and torturing his friends for the past few days trying to find out where the pickered could possibly have caught the herring, hence he was unusually quiet on this occasion.

There is no member of the fraternity here more worthy of the attention shown than was the guest of the evening, Mr. Sheppard. He is one of our oldest and most honored florists. Although his hair has been for many years white, yet his heart is as young as the youngest, and he possesses the happy faculty of being always cheerful and bright, no matter what trouble may come. At his home in Lowell, he is always ready with a kindly and hospitable welcome for any of the boys who may chance to call, and long may he live to enjoy his easy chair and to gladden our hearts with his sunny smile.

W. J. S.

New York.

Trade during the past week was very dull, everything at a standstill with an abundance of flowers everywhere.

Siebrecht and Wadley's annual orchid show at the Madison Square Garden was a great success artistically and financially. The designs by Mr. J. F. Barrett were very artistic covering as it were bits of scenes from many lands. On entering the main hall we found ourselves in a Dutch flower garden, the beds being prettily arranged in tulips, hyacinths and other bulbous flowers whilst away to our left a fine border of choice conifers gave a natural touch to the scene. Further on we came to the English Garden, with its beds of hybrid roses in bloom; here also were beds of marguerites, cinerarias, azaleas, primroses, geraniums, etc., flanked by groups of fine foliage plants. Beyond this the elegant statues of statuary, the fine gravelled paths and the beautiful carpet bedding tells us we are in the Italian garden, and last and most romantic of all is a scene from the famous Ponce de Leon, with its winding stairs over crystal fountains, and here and there bits of scenery that delight the eye. Here we found a bank of superb phalenopsis in variety; they were certainly the finest seen here in a long time.

In return to the center of the hall and behold one of the grandest collections of orchid blooms ever seen here. They are exhibited by Kimball, of Rochester, N. Y. Here a group of cypripediums show their beautiful tints lost in a mass of Lycaste Skinneri. Above these again great masses of cattleyas and phalenopsis with immense dendrobiums hanging from the towering palms above, the whole forming a beautiful center. All it seemed to lack was a fountain here; that would have been beneficial to the plants, and a great addition to the surroundings. Considering everything it was one of the best arranged exhibitions ever given here.

The failure of *L. longiflorum* has been quite extensive here, but there will be enough Harrisias to meet the Easter demand. There are some very fine azaleas in already. It is feared hydrangeas will be too late for Easter.

Mr. May's suggestion in your last issue regarding the carnation contest is an admirable one and should be acted upon by all concerned. Judging from the amount of entries from the different classes already received, our spring show will be one of the most important ones from a trade standpoint ever held. Anyone having novelties or new flowers of any kind will find his opportunity here.

Herman Kuhn had a table decoration for a large dinner given by Mrs. Lederer. The round center piece was composed of magnificent *La France* as if growing on their bushes, the longer ones being bent over forming miniature arches, garlands and favors of the same rose being artistically placed round the border.

McConnell had the decorations for the New York Yacht Club dinner given at the Murray Hill Hotel, the design being a facsimile of the victorious Volunteer, made of Mermets and hyacinths.

JOHN YOUNG.

New York Floral Notes.

Our florists have seldom had so much to do as this Lenten season, when they have been all the time busy with balls, parties or weddings. The Arion Ball which was done by Hanft Bros. was a very elegant and elaborate floral decoration in Madison Square Garden. There were three immense streamers of nine strands of flowers and leaves suspended in graceful festoons from the ceiling, the whole length of the garden, while at each side of the big room was a floral eagle, fourteen feet from tip to tip, suspended from the arches with festoons of orchids, smilax and roses.

The first tier of boxes was festooned with roses, lilacs and tulips, all the enclosed boxes at the ends of the building were decorated with garlands of hemlock or laurel and diamond or heart shaped figures of natural flowers. The second tier of boxes were ornamented with garlands of laurel and evergreens of many sorts interspersed with flowers.

Mr. P. L. Bogart has made up several fern baskets with ribbons tied on the side handles, which make a particularly pretty dinner decoration. These baskets are from two to three feet in length, and have a straight line of roses directly through the centre and pink ribbons on the handles. Another basket had red tulips through the centre, and this was tied on its handles with deep red ribbon. Another one still had yellow tulips through the centre and yellow ribbons on the handles.

For a wedding on the 5th of the month, the church in 66th street and Madison avenue was decorated with palms and two large bunches of Easter lilies. There was a large wreath of *La France* roses under which the pair stood to receive their friends. Palms stood each side of this wreath, which made a very pretty decoration. The stairs were twined with smilax, and there were large bunches of daffodils at each step, tied on the banisters with ribbon of the same color. This is an exceedingly nice way of dressing banisters. The hall mirror was banked with plants, and a wreath of crimson carnations was placed at the top of the mirror.

Ladies are decorating themselves with large bunches of daffodils, with a yellow genista fringing to wear in the street. Another bouquet that is much worn is a bunch of violets at the breast, and a large bunch of heliotrope in the muff.

McConnell did the Lincoln dinner of the Republican Club, which took place at Delmonico's. There were three large tables which were covered artistically with pink roses laid on in a loose fashion. Each guest had a cluster of violets.

John Morris the florist of Jefferson Market has been busying himself with trying to get the market florists a position on Union Square in which to sell their goods from their wagons next summer. They will go there early in the mornings to make their sales, and are expected to be away from Union Square by seven o'clock.

Mr. Morris is also interested in the planting of trees in all localities where the streets are wide enough to allow it. He hopes to do a great deal for our florists in the way of getting these motions passed.

Mr. Thorley has been making several boxes of crocuses, which are gotten up very prettily. These were the dark purple kind, which had bright yellow stems. He arranged one decoration of these plants in a square box which was trimmed with gilt all around the sides. This box had a purple satin ribbon about it, which made the crocuses look very dresy, and a large bow was placed at one side. The box of these flowers was arranged for a dinner table where the lady was in mourning and there were bunches of violets for every lady guest.

A pansy dinner was arranged by Mr. Bogart for Mrs. Cleveland. There was a centre piece of yellow and purple pansies in an ordinary flat basket, which was set on a silver basket. There were also favors of these pretty flowers.

All of our florists made handsome pieces for the funeral of General Sherman. Thorley decorated his picture with violets and lily of the valley, McConnell made a piece of three palm leaves with white roses at the handle. Klunder also made a very handsome piece, which was of palm leaves with a crown of white roses on the stems.

F. A. BENSON.

Our Paris Letter.

After the very hard winter, Paris is beginning to bloom again, the streets are filled with little two-wheeled carts attended by old women, and piled high with fresh green Mahonia branches, holly and sometimes even mistletoe, which hangs thick in the trees in the country. In the city great heaps of acacia branches in full flower, bunches of Roman hyacinths, paper white narcissus and of violets complete the rather monotonous stock. But how temptingly they are displayed! Bunches of thirty to fifty violets for two cents, eight or ten Romans, small sprays for ten cents, a little branch of acacia for a cent or two more. Narcissus are still a little higher and the white lilacs which often appear, cost ten to fifteen cents a spray, forced though they are. Lilacs are the standard winter flowers here and until within a couple of weeks have furnished the main part of every fine piece I have seen.

Roses are only now beginning to appear, the little "hubbins" from Nice that have been exhibited in the window-corners during the winter, would hardly be called roses with us, but now and then during the past week I have seen a fair cluster of roses displayed. Among the shops in the boulevards, however, the preference is for the tall sprays of lilacs, massed in immense round flat baskets with high handles twined with satin ribbon and ornamented with large bows. There is very little mixture of color, the ribbons, which are very freely used, matching the flowers to a nicety. The handsomest piece of a very fine show last week was a flat round basket about thirty inches across, covered with white satin and filled very high with white azalea branches in snowy bloom, the high square handle being decorated with an immense satin bow, the whole piece being nearly five feet high.

Dutch bulbs are also becoming more plentiful, and not being forced very fast are very perfect. A popular fancy for lilies of the valley is to put them, planted in moss and crowded close together into

FLORAL ARRANGEMENT.

square or oblong baskets with a canopy or roof, each corner of which has the inevitable ribbon bow. An oval basket filled with nearly a dozen perfect blooms of single pink hyacinths, (Gertrude I think) had the tint of the flowers repeated in the ribbon. Again, a round low dish of double Tournesol tulips had a handle twined with ribbons of orange and crimson. The opposite extreme is sometimes reached with very good effect by crowding a jardiniere with blooms of all colors and varieties of hyacinths and tulips. A pretty piece was a large rush bowl filled with tall sprays of white lilacs and feathery yellow anemons with the natural foliage of both. A very handsome window full of decorative plants contained a number of fine araucarias, with the spaces between the branches decorated with great bunches of pink and blue ribbons; the effect was odd, but certainly very gay and pretty.

For funerals, immense wreaths of violets, edged with some white flower just to show the outline, and wreaths of white or purple lilacs are almost the only things used; sometimes a large cross of violets, or in the case of an officer or celebrated person a long cypress leaf with an inscription on the ribbon. Artificial flowers are much used for funerals among the poorer classes, and are universally used for house decoration. Plants are imitated with yellow leaves that one aches to nip off, and bouquets of roses that lack only perfume, ornament many a dinner table. These things have had their day, however, and now on two mornings of the week the flower markets are filled with finely grown primulas, cyclamens, bulbous plants and azaleas in their white paper wrappings; but of them another time.

F. L. V.

DOUBLE Easter number next week.

Floral Arrangements.

We present herewith an engraving from a photograph of a very effective floral arrangement sent us by Mr. H. H. Battles, Philadelphia. The engraving speaks for itself.

Bucksport, Me.

About thirty members of the Maine Pomological Society visited Bucksport as the guests of Mr. F. H. Moses, on Thursday, February 26.

After being shown through the extensive rose houses, the company was handsomely entertained by Mr. and Mrs. Moses at their residence.

Maine has cause to feel proud of the recent advancement of one of her bright young men. Mr. Merritt L. Fernald, son of the President of the Maine State College at Orono has been called to

take the position of assistant botanist and herbalist at Harvard University. The appointment has created quite a sensation; the young man is but sixteen years of age. Those who know him have no doubt of his ability, however, for his achievements have been for some time attracting much attention in scientific circles, and he has long since mastered the entire flora of Maine and Northern New England, besides discovering and classifying a large number of hitherto unknown species. A great future is predicted for him. S.

Lamborn vs. Mrs. Fisher.

MR. EDITOR: I was content to leave the subject of "Carnation Lamborn"—not so with him. Chitty's answer in your No. 140—not so with him. He seems bound to "boom" Lamborn regardless of his own damaging figures; but I am of opinion that those growers who have to take the early train with a box on their arm, and who have to be satisfied with the prices weekly quoted in your paper, cannot be hood-winked by his statements of a carnation, which by his own showing has only produced a trifle better than one flower per plant per month up to the first of the present month.

The fact is that with this production of bloom—no person outside of Paterson, N. J., and I have heard it said that New Jersey was a foreign country) could pay their coal bill with such results. I think I can safely say that ninety-nine out of every hundred of the growers in the United States will join me in saying that if Lamborn is to be judged by Mr. Chitty's showing of bloom, it would be hard to find a poorer variety. Very few growers sell cuttings, but depend on the flowers, and it is the price they get and not whether Mr. Chitty gets 10 cents or \$10 apiece for his flowers, that they judge the profit by.

Evidently Mr. Chitty sees he has—as well as the "boys" say "slopped over," and to cover the real issue, makes a challenge, not to deadly combat, but with that which to those who grow carnations for \$2 per hundred, (and therefore have no bank account) is quite as formidable, namely, money, and I am the party who is indirectly asked to "knock the chip from his shoulder."

Up to this time I have not, either directly or indirectly alluded to Mrs. Fisher. I need only say, this carnation, like all others must stand on its merits, if found worthy it will assert itself, if worthless it will be discarded as Lamborn has been by a large number who have tried it.

I cannot be induced to wager money, but in a modified form as stated below, I will accept Mr. Chitty's challenge and in doing so I avail myself of such rights as a challenged party is entitled to.

I will on Tuesday, June 9, 1891, exhibit fifty flowers of carnation Mrs. Fisher against fifty flowers of the carnation L. Lamborn, to be judged by the following scale of points.

First. Size and form of flower.

Second. Fullness and substance of flower.

Third. Keeping qualities of flower.

Fourth. Fragrance of flower.
Conditions: Flowers to be kept three days, as a test of keeping qualities; the referee to take into consideration the fact that the flowers of Mrs. Fisher, will have been cut earlier and transported further than Lamborn.

The referee to be Wm. Falconer; the location at Mr. Falconer's place of business, Glen Cove, L. I.; the flowers to be delivered on or before 12 o'clock m. on the said 9th of June.

If Lamborn wins, I agree to pay to the Society of American Florists the sum of \$50 within ten days after the award is made, and, if Mrs. Fisher wins, Mr. Chitty is to pay the sum of \$50 to said society within ten days after award. The referee to make his report in the AMERICAN FLORIST.

If these terms are accepted I am to receive notice on or before April 3, 1891.

I name Mr. Falconer for three reasons: First, he is not engaged in commercial trade; second, for his eminent ability; third, for his high honor and integrity. I state upon my honor, that I do not know Mr. Falconer and have never to my knowledge seen him.

I do not believe in this kind of business, or that it should be encouraged, and my only reasons for replying, are that to refuse might be considered a species of moral cowardice, and that I have unbounded faith in Mrs. Fisher.

I also believe that this variety will not cause either the originator or introducer to retract what was said of it when introduced, that "while it is not claimed as a perfect ideal in all respects, it is so good, so much better than the old sorts, even the new whites recently sent out, that it will find a place for itself upon its merits."

This is my last communication on this subject, and I hereby serve notice that I cannot be induced to continue it further and shall very respectfully decline to keep up a newspaper controversy, no matter what may be said, for I deem it to be as unprofitable to me as to grow the Lamborn carnation. R. T. LOMBARD.

Wayland, Mass., Feb. 25, 1891.

Heavy Expenses.

I shall not undertake to reply in detail to Mr. Chitty's article in the FLORIST of February 26th, as it would take too much time and use up too much space in your journal, but will call attention to a few of the many curious things in his statements.

Imagine a level-headed business man propagating 40,000 rooted cuttings of Lamborn for sale at \$2 a hundred or \$15 a thousand, when according to his own statement every cutting would have been a flower which he could have sold at \$5 a hundred or \$50 a thousand. Mr. Chitty says he got \$350 net for the 40,000 cuttings and as he also states that he received \$50 a thousand for the flowers we find that according to his own statement he sacrificed \$2,000 worth of bloom in order to secure \$350 worth of rooted cuttings.

Mr. C. has evidently reversed the old business maxim, "buy cheap and sell dear." According to his own statement some of those fine Lamborn flowers he is willing to exhibit and even to put money up on were sold through a commission man at \$2 a hundred less charges, but when he bought white carnations at the time his he bought were between crops he paid \$3 and \$4 a hundred. This is a clear case of buying dear and selling cheap.

Mr. C. contemptuously tells Mr. Nich-

olson that "the insignificant little dab of \$437.50" would hardly pay the taxes on one of his lots 20x100 feet, but in the next issue he informs us that his taxes on a lot 25x100 is 2 1/2% of \$2,500 or \$75. These are his own figures. If Mr. C. knows what he is about, why do his figures so lamentably fail to agree? And can it be possible that Mr. Chitty does not know that 2 1/2% of \$2,500 is not \$75? If he is so weak on his multiplication tables he had better study up before making any more statements.

Again in comparing the space devoted to carnations, for his own house he gives the square feet of bench room only, while for our house he gives the whole surface under glass, paths and all. Of what value is such a comparison?

The funniest thing of all is the pleasant way Mr. C. has of ascertaining the cost of production. He divides the gross receipts by two, and one-half is expense, the other half profit. According to his statement his expenses and his net profits on one house were each \$3,237.50. This is \$800 a month for in round figures \$27 a day. The profits will make the average grower's mouth water, but the expense is simply appalling. It cost Mr. Chitty \$800 a month to run one greenhouse, according to his statement. Certainly he will not ask us to believe this. Such wild statements make discussion unprofitable, hence this will be my last communication on this subject.

Bristol, Pa.

THOMAS DEWITT.

Chicago Carnation Notes.

Messrs. Schiller & Mailander and Mr. F. Stielow are large growers of cut flowers for the Chicago market. They are both at Niles Center and their places join each other. The soil on both places is apparently identical in character, a light black sandy one. Nevertheless Schiller & Mailander have splendid success with Hinz's White, better than with any other white carnation, while Mr. Stielow has very poor success with this sort though he purchased his stock from his neighbors, Messrs. S. & M.

But again, Mr. Stielow grows Garfield to perfection and esteems it highly, while Messrs. S. & M. have been obliged to discard it as unprofitable. Being neighbors they visit each other's places frequently and no difference in the treatment can be detected.

The soil for the benches in which the plants are placed for winter blooming is procured from a short distance by both growers, the localities being about a mile apart. The soil is each case is however, about the same, a virgin light clay, the only difference discernible being that that secured by Messrs. S. & M. is more friable when dry and not so liable to bake. Does the soil make the difference, and does Garfield do best in a somewhat more "sandy" soil than would suit Hinz's White?

Is not a great deal of the difference in value of certain varieties at different places, due to the difference in soil? And can the treatment be so adapted to the soil as to in some measure overcome the effects of this difference?

With Messrs. Schiller & Mailander, Hinz's White is not a cropper. They also grow silver spray and they find it even better than Hinz's from August to Christmas, but after the holidays it does so little that they find it best to throw it out and utilize the bench room otherwise. They like Tidal Wave. The only difficulty they have with it is in getting cuttings to keep up the stock. They get

nothing but flowers. They find Emperor of Morocco the best dark colored sort. Chas. Sumner does well with them and it sells well because it keeps so long in good condition after being cut.

BRIDE'S BOUQUET.

Bride's Bouquet.

We present herewith an illustration of the bouquet carried by the bride at the Willing-Astor wedding in Philadelphia. This was an elegant bunch of flowers including *Cattleya Trianae* alba and orange blossoms intermingled with fronds of *Adiantum Farleyense*. The bunch was tied with frosted white ribbon three inches wide. It was arranged at Thorley's, New York.

Notes from Summit. N. J.

BY WM. FALCONER.

Summit is a fashionable, country settlement, in a hilly district, and an hour's ride from New York. I ran out there for an hour the other day to see Mr. May about some nomenclature business, and just had time to pass hurriedly through his greenhouses. His place is about a mile from the R. R. station, but easy to get to.

His establishment is quite extensive and almost a strictly rose-growing one, and the many greenhouses are connected to roomy sheds and by covered passage ways so that one can pass through all of them without once going out of doors.

The rose-houses are long, wide, roomy hip-rooted structures, with a level bench bed in front, a level bench-bed at back, and a sloping bench-bed in middle. About 3½ inches deep of soil are used upon the benches which are raised well above the ground. The ventilators open at the ridge and to the south instead of being hinged at the ridge as we usually find them, and they are hinged in front on the slope of the roof just where the lap is in the case of ventilators hung from the ridge. Mr. May is emphatic as to the advantages of this way of ventilating greenhouses over the ordinary way; the heated air always goes straight to the top of the house, when the ventilation opens on the side of the roof it does not admit of immediate escape to this heated air, but when the opening occurs at the ridge the heated air escapes at once, and no draughty current of cold air is perceptible in the house and this in a large measure is a preventive of mildew.

Mr. May is a firm believer in hot water for heating greenhouses, and does not use steam. His place is heated with six

hot water tubular boilers and runs of 2-inch pipes. These small sized pipes are quicker and he believes more economical than 4-inch ones.

Although his greenhouses are joined to the sheds in ordinary commercial style they are not joined together in ridge-and-furrow form, but each house is complete in itself and several feet distant from its parallel neighbor. This is in order that the one house shall not shade the other in winter, as they would do more or less were they joined together, and that too at a time when sunshine is of paramount importance in the production of good roses.

His roses, both young stock and blooming plants, were in splendid condition, clean and vigorous. The pathways were carpeted with tobacco stems and the atmosphere was pungent with nicotine vapor, much to the disgust of the aphides which could not enter in and live. Light boxes, a foot or fifteen inches square, were placed here and there conveniently and near the pathways, into which to throw every dropping and decaying leaf that might be picked off or about the plants, and in this way everything was neat and trim as a private conservatory, and nothing was left around to rot and generate and spread fungus diseases. I would be best to myself were I to attempt to tell you anything about his methods of cultivation, my visit was too brief. Suffice it to say that most every good forcing rose in cultivation here finds a congenial home and has got to pay a profit. The Waban was in bloom. Mermet and the Bride were in quantity, so too were Beauty, La France, Albany, Mrs. John Laing, Wootton, Watteville, Cusin and several others. Ma Japane, although its buds are small, is highly esteemed because of its beautiful and uncommon color, and a select coterie in New York demand it in preference to any other rose bud. Papa Gontier in a moderately cool house was unusually brightly colored. Although he does not now grow Her Majesty, he tells me that some of his customers in the south report it as being one of the most satisfactory roses they grow. Here it was slow to bloom and prone to mildew. Mr. May tells me that last year he sent a little less than half a million cut roses to the New York market.

He doesn't grow carnations, but a bench of young plants of Lizzie McGowan I noticed in a hybrid rose house seemed to indicate a step in that direction. He pronounced this variety as being, in his opinion, the very best carnation grown today.

His big magnonette so familiar in the trade occupies a long span-roofed pit and was in fine bearing estate. When well grown it is a very satisfactory crop financially. Like most other cultivated plants however magnonette too has its enemies; its worst foe is the leaf disease which is somewhat similar to the violet disease, and especially common in outdoor magnonette after midsummer. But Dr. Byron D. Halstead has bestowed upon it the penetration of his learned cryptogamic eyes and promised developments. The choicest plants were tied up and staked and preserved uncut for seedling purposes. From them are to be bred the yard-long World's Fair strain that Bob when merry sang about.

I was delighted to find a small greenhouse filled with orchids and containing a splendid display of dendrobiums in bloom. "These belong to Mrs. May," said John, "and I have got nothing to do with them beyond to look at and admire

them." And I am glad of it. I wish every florist's wife had a greenhouse of her own where she could grow something for love and for her own home use.

In a tub in one of the rose houses my old favorite, the deliciously fragrant little Cape of Good Hope pond weed, *Aponogeton distachyon*, was growing and in bloom. It is a true winter blooming plant and a delightful aquatic, and it does not require a large vessel to grow it well in. It is hardy out of doors near the edges of small ponds, providing the water is less than two feet deep on the one hand and the roots are never reached by ice on the other.

Yacht Club Design.

The accompanying diagram shows the form of a design arranged by Florist P. L. Bogart, New York, for a yacht club dinner.

The wheel was made of red carnations, the lettering being in white violets, and the handles were alternately of violets and pansies. The ensign was of red carnations with white border and the Maltese cross of purple violets.

The drawing from which the engraving was made was kindly sent us by Mr. John Young.

Preparing For an Exhibition.

In answer to your correspondent, and an invitation on your part, I will endeavor to give you our little experience in getting up a chrysanthemum show.

Our first start was to appoint a committee to consider the advisability of holding a show and ways and means of raising a sufficient amount of money in the event of the show being a failure.

YACHT CLUB DESIGN

The report of the committee was as follows: "We recommend that the sum of \$150 be offered in prizes and that a guarantee fund of \$200 be subscribed by issuing 40 shares of \$5 each; that the club take 10 shares and the balance be subscribed amongst the members, and the profits or losses, if any, be divided pro-rata." This was considered sufficient. The shares were all taken up and the committee authorized to go on with the show. This they did by arranging a prize list, communicating with, and securing exhibits from several prominent growers of the United States and Canada. A suitable place for holding the exhibition was secured (the City Hall) free of charge. No charge was made for entries. The admission was placed at 25 cents for the afternoon, two for 15 cents, evening 25

cents, and school children were admitted one day at 5 cents. I give you our receipts and expenses: Receipts from all sources \$211.28; expenses, printing, advertising, bill posting and postage, \$67.44; music \$34; decorating hall, vases, tables, labor, etc., \$28.30; prizes awarded \$129.00, making a total of \$268.44, leaving a deficit of \$57.16, thus necessitating an assessment of 30% on the shares.

The show was held four days and three evenings, music each evening. The weather was all that could be desired, but the attendance was anything but encouraging to the committee who had worked day and night to make the show a success, and as an exhibition, it was conceded by those who visited it to be the best flower show ever held in the city.

Now it must be remembered that this was our first attempt, also that our citizens in little London in the bush, have not yet been educated in the love for flowers to a sufficient degree to appreciate our efforts. But we are ambitious and although our first show has not been all that could be desired, we are going to try again and with our experience in the past we hope to be more successful in the future.

WM. GAMMAGE.

London, Ont., Feb. 23.

Cheap Trays for *Gladiolus* Bulbs.

Where a specially arranged apartment of a suitable temperature cannot be provided for the storage of *gladiolus* bulbs during the winter, it is frequently desirable, as well as necessary, that the bulbs should have a proper place assigned them in the general storage cellar, provided the latter is frost-proof.

In a cellar of ordinary dimensions, 10,000 bulbs or even more, can be conveniently stored without any infringement upon the space usually devoted to cellar storage, and which is occupied by the thousand and one things usually found in such a place.

A month ago we completed the cleaning and bulging of the bulbs and their arrangement upon the trays. We have ready and immediate access to all the varieties that we carry in stock and which may possibly be called for during the shipping season.

We have tried this method for a number of years and like it so well that we give it for the benefit of that large class of readers of the *FLORIST* to whom a suggestion that combines economy with convenience is a boon.

In our cellar the joists overhead are 9 inches wide and placed 20 inches apart in the clear. It is the spaces between these joists that we utilize for storage purposes. See Fig. 1.

Fig. 1.

a. Joists. b. 20-inch space. c. Roosting lath.

Here the bulbs have the double advantage of being away from all dampness, and they rest in a temperature a few degrees higher than that found on the floor of the cellar, because the heat of the living rooms above communicates its warmth to the stratum of air immediately beneath the floor.

Roosting laths are nailed 20 inches apart at right angles to the joists for the first row of trays to rest upon as shown in fig. 1. The laths for another row should be placed 4 feet from the first so as to leave sufficient room for the shifting and moving of the trays.

The trays themselves are made of unplastered plastering laths $1\frac{1}{2}$ inches wide and 4 feet long; 9½ laths are required for one tray which can be readily made by any one possessing some skill with saw and hammer. By following the measurements which I shall now give, there will be no waste of material. The remaining two-thirds of the tenth lath go to make a portion of the next tray.

Take two plastering laths free of knots and saw off two pieces for the sides of your tray, 31½ inches long, the two remaining portions will make the ends and should be 15½ inches in length. Now nail the end pieces to and over the sides for the framework of your tray. See Fig. 2.

Fig. 2.

Thin 1-inch wire nails are used for all purposes. A lath will give three pieces for the bottom. Take six laths and saw eighteen pieces 15½ inches in length and nail them on to the bottom allowing the thickness of a lath space between them. Be careful that the two pieces at the ends of the tray are nailed on first so that they will cover both the side and end pieces of your framework on the lower edge and give firmness to it. See Fig. 3.

Fig. 3.

Finish by nailing two laths on the bottom lengthwise covering all the ends and the shorter pieces and securing them to their places. Line the tray with paper and it is ready to receive the bulbs. A label bearing the name of the variety is tacked on to each end of the tray. We use the same labels for this purpose that we ship with our bulbs to our customers.

Three trays can be placed one above the other in the space between the joists overhead. We have them systematically arranged so that we can easily find what we wish.

One tier of trays is given to unnamed white and light varieties, another to red, a section of another to yellow, a tier to the named sorts and so on.

Besides *gladiolus* many summer flowering bulbs that require lifting in autumn do well stored in this way. No better place can be found for *Richardia maculata*, *tigridias*, *oxalis*, *Amorpha phallus* *Rivieri*, etc.

Laths taken from razed buildings, the mortar having been scraped off, have been used for this purpose; this seems like carrying economy to extremes. If you wish your trays particularly nice and smooth, run over your material with a jack plane.

The construction of the trays is work for leisure moments during the dull season. After the spring rush some of our readers who hail a helpful suggestion with delight will "look aloft" in their

cellars and avail themselves of the blessings undreamed of overhead.

THOMAS J. OBERLIN.

Sinking Spring, Pa.

ශ්‍රී ලංකා සහ විදේශයන්.

Conducted by CHARLES F. BAKER, Agricultural College P. O., Ithaca Co., Mich.

Send specimens of unidentified insects and diseased plants to him at above address.

Fuller's Rose Beetle in Milwaukee.

Mr. John W. Dunlop, of Milwaukee, writes us in regard to *Aramigus Fulleri*, Horn., (Fuller's Rose Beetle), of which he sends a specimen. He states that it has been introduced into Milwaukee with palms. In regard to its earlier stages he says that the eggs are laid in the bottom of the leaf stalk, where the larva hatches out and feeds on the juices of the plant till full grown. Besides the palm he finds the mature insect feeding on the foliage of *Dracena nobilis*. This insect, which has of late become quite common in eastern greenhouses, is fully described and figured on page 304, number 109, of the *FLORIST*.

An important question for the working florist to answer is this: Does this insect in its larval state live in the roots of roses only, or will it affect those of other plants on whose leaves the imagos subsist? We would like to see something definite in regard to it.

The Color Chart.

ED. AM. FLORIST.—In regard to the suggestion that a color chart be distributed by seedsmen and florists with their catalogues for one would favor the idea. The result aimed at, the education of the public and the uniformity in color description, might also be attained in a measure if leading class journals would adopt the same plan and distribute to their subscribers as a supplement such a chart. Not only among florists but naturalists in general, is the need felt, and the readers of our *West American Scientist* as well as your own readers would appreciate such a work.

The plan to number the colors would not be desirable, and the naming should correspond as nearly as practicable with our only American chart of colors, "Ridgway's Nomenclature." To change this nomenclature I would deem bad unless an international work could be produced as an authority for a century to come.

Another way of securing a chart of colors would be to employ some firm to prepare sheets of a uniform shade, cut up into squares and mounted in the manner of the samples in use among paint dealers. The cost for each tint that could thus be represented, in an edition of 5,000 copies, would approximate \$5, or only \$1,000 for some 200 colors, and any publisher would certainly be well reimbursed for such an outlay. These paint samples are mainly prepared in Chicago I believe and may we not hope that the AMERICAN FLORIST will give us such a book as suggested. This need not interfere with the proposed lithograph for catalogues.

C. R. ORCUTT.

San Diego, Cal.

[The plan suggested in the last paragraph is hardly practicable. It would be extremely difficult to secure the shades wanted in material already available, and the expense of preparing even a portion of it would be very considerable, with the result of accomplishing but little. And the lithograph would cover the whole ground.—Ed.]

JAMES HUTCHISON.

OBITUARY.

JAMES HUTCHISON—The subject of this sketch, who died last month at his home in Oakland, Cal., was born in Glasgow, Scotland, May 24, 1824. Served an apprenticeship in the nursery business with his father and other prominent gardeners round about. At the age of 22 he was appointed head gardener at the Earl of Limerick's estates, and eighteen months afterwards was placed in charge of the "Princess" Gardens, Edinburgh. In 1845 he emigrated to America and followed his vocation for a few years in New York and New Jersey, coming to California in 1852. In 1853 he entered in the nursery business in Alameda. Mr. H. remained in Alameda until the fall of 1861 when he went to Nevada as superintendent of a quartz mill. Here he remained about one year and then took charge of a mine in San Bernardino, southern California, for six months. He then returned to San Francisco and engaged in the fruit business. Six months later he took charge of the Mountain View Cemetery in the suburbs of Oakland. Residing there for about one year, in 1864 he started business in Oakland, where he has remained ever since. No Californian in this branch of horticulture has been more widely or favorably known throughout the U. S. than Mr. Hutchison, his business having been a large and rapidly increasing one from the start and all his commercial transactions carefully entered into and conscientiously and satisfactorily carried out. In the latter years of his life he added also a seed department to his florist's business, mainly for his local trade. He had a very large circle of acquaintances throughout the United States and Great Britain, having made during the last five years two trips across the continent and ocean and an extended visit in Scotland, the land of his birth. He was one of the original stockholders in the well known California Nursery Co.,

In 1877 he purchased the lot where his establishment was located, at the corner of 14th and Washington streets, Oakland. Thus he disposed of recently for \$72,500. Mr. Hutchison's death will leave a gap in the florist's trade on the coast.

News Notes.

SARATOGA SPRINGS, N. Y.—Chas. Ludwig is building two new greenhouses, one 20x100 and the other 6x18. He expects to have them ready for spring bedding plants.

ST. LOUIS.—Jno. M. Hudson has sold his wholesale cut flower commission business to A. Brandenburg & Co. He will confine his attention hereafter to the growing of cut flowers.

DOWNER'S GROVE, ILL.—E. J. Miller has sold out to E. H. Prince. Mr. Miller was compelled to retire from active work by poor health. Mr. Prince will continue the business at the old stand.

CHELSEA, MASS.—Geo. W. Marshall is building two new greenhouses each 106x18. He expects to have them in running order by March 15. He has built five houses since the middle of last September.

BALTIMORE.—At the meeting of the Florists' Club, Feb. 23, a paper on "Cost of growing roses" was read by Mr. E. A. Seidewitz. President McRoberts appointed a committee to prepare a statement of the cost of growing roses for publication.

PITTSBURGH.—Arrangements for the chrysanthemum show to be given next fall by the newly organized florists' club are being rapidly perfected. Committees are now at work arranging details. The Central Rink has been secured and the exhibition will be held there.

PORT HURON, MICH.—Mat Ullenbruch surprised his friends here recently by an-

nouncing the arrival of a bouncing baby boy, an only son and heir. A large number of his friends in return surprised him pleasantly by presenting him with a handsome gold headed cane.

BALTIMORE.—The spring show of the Gardeners' Club of Baltimore will be held at the Concert Hall, Academy of Music, Wednesday and Thursday, April 22 and 23. Copies of the premium list may be had from the secretary of the club, Mr. Henry Bauer, 1875 N. Gay street.

KIRKWOOD, MO.—Luther Armstrong, one of the original incorporators of the Florists' Hail Association, lost about 600 square feet of glass by hail February 24. Of course he was insured and will receive payment for his loss as soon as proof has been passed upon by the officers of the association.

BUFFALO.—Mr. Wm. Scott says: "We are looking for a big trade at Easter and are pretty well prepared. Business was flat around Christmas and early January, but lately it has been very good. Plants such as azaleas, lilies, cytisuses, etc., never sold so well with me. I expected the bottom had fallen out of the tulip trade, but the demand for them is good and a little better than ever."

SAN FRANCISCO.—At the last monthly meeting of the California State Floral Society essays were read on "Edging plants," "Singing garden birds" and "Climbing plants other than roses." In the premium list adopted for the exhibition to be held May 6 to 8, prizes are offered for roses, camellias, carnations, geraniums, sweet peas, clematis, azaleas, begonias, coleus, ferns, California wild flowers and displays of flowering and decorative plants. It is promised that the land for prizes for the fall show will be larger than for any former one, the result will undoubtedly be a much larger and better display than heretofore. The subjects for next meeting are "Propagation of rhododendrons" and "Annals of long blooming season." About \$600 worth of orchids are now on their way from South America to be added to the collection at Golden Gate Park. A meeting of florists, nurserymen and seedsmen of this city, Oakland and Alameda, was held recently for the purpose of organizing a Florists' Club similar to those existing in other large cities. A temporary organization was effected, and another meeting will be held for the purpose of perfecting the organization.

Minneapolis.

The Society of Minnesota Florists held their semi-annual meeting at Minneapolis March 4. The attendance was fairly good, although not as good as might have been expected considering the good papers that were delivered on different subjects.

A nice display of flowers was made and premiums were given to E. Nagel for basket of cut flowers and to Chas. Hanson for cut roses, his roses being unusually fine. Mr. J. C. Vaughan of Chicago, exhibited some flowers of the new Wabou rose and Mme Crozy canna, also the new coleus Beckwith's Gem, but unfortunately, having been frozen during transit, they presented a sorry appearance.

The society decided to hold another chrysanthemum show next fall either in St. Paul or Minneapolis, to be decided later.

GUST MÄLMQVIST.

NEXT WEEK comes our double Easter number.

The Color Chart.

We have been extremely interested in your articles on color and hope you will not let the idea of publishing a graduated sheet of colors fall to the ground, as it is a thing that the trade has been wanting for years.

J. R. PIERSON & SONS.

Chillwell, Notts, England.

LAST CALL for advs. for the double Easter number. Copy must reach us not later than Monday the 16th to be in time.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By a first class florist as foreman in commercial place. German, 12 years experience, best of references. Address: J. K. care American Florist.

SITUATION WANTED—By a young man of 19, German, to learn the florist trade in all its branches, have had some experience. Address: C. STELZLI, Bellefontaine, Ohio.

SITUATION WANTED—By a gardener, single, N. sober, reliable, to grow plants for retail market. None but good parties need apply. State salary. J. J. care American Florist, Chicago.

SITUATION WANTED—By March 15 or April 15 as gardeners assistant in large private place in the east; good references. 7 years experience. Adl. Daniel. Address: West, care American Florist.

DAISY SNOWFLAKE

Daisy Snowflake—This Daisy, if treated like Violets, will give splendid returns for all labor bestowed upon it. It is the best of its kind and does not supply the demand for cut flowers, as it keeps fresh from 7 to 10 days after being cut, and then looks as fresh as other white flowers just cut. The flowers are borne on stout long stems, fine white and beautiful yellow centers. It is a very early bloomer. Price, a great acquisition to florists.

Price, \$1 per doz. free by mail; \$5 per 100 by express. See WHAT F. J. KELLER SAYS ABOUT THIS DAISY:

ROCHESTER, Jan. 2th. Daisy Snowflake is quite a useful flower both for floral designs and for cut flowers, and when tied up in small bunches they sell very rapidly with us for funeral designs. We use a great many in place of carnations, as it is cheaper and covers almost the same space, and keeps fresh considerably longer. Be sure and send me some, as I cannot get them fast enough for my customers. They say it is the best cut flower I buy because it keeps fresh 2 to 3 weeks. I feel I can't say too much in favor of this useful flower. Yours truly, F. J. KELLER.

FRED SCHNEIDER, Wholesale Florist, WYOMING CO., ATTICA, NEW YORK.

ORCHIDS.

GOLDEN BEAUTY TO THE FRONT.

It was never exhibited, but has stood the more practical test, for no early yellow Chrysanthemum gave better satisfaction to seller and buyer than the above. Such was our experience, and also of all who handled it. What they say.

"We handled no early yellow that sold better or gave better satisfaction to the buyer."—James Cartledge, of Pennock, Bro., 311 Chestnut Street, Philadelphia, Pa.

"You can get nothing better than that."—Wm. Voght, Jr., 5th and Cooper Sts., Camden, N. J.

It was described in these columns last year, and we leave it to tell its own story. Suffice it to say that our claims for it have been more than sustained, and that it combines all the essentials of a first-class market variety for potting and cutting. Ready in quantity March, April and May. 12 for \$1.00 for \$2. You can not afford to get left on this offer. Orders booked now are filled in rotation as far as plants are ready, by express or free by mail.

THE NEW DOUBLE WHITE DAISY SNOWFLAKE. One of the best things out for winter flowers. Will grow and bloom all winter in a cold frame, and will covered cold nights will need no better quarters. Given splendid return. It does not seed, and can only be increased by division. Flowers pure white, very double, and beautifully quilted. As large as a do. piece. Ready now. 12 for \$1.00 for \$5. Sample plant and bloom free by mail on receipt of 10 cents.

See other special offers in another column.

Chipman Bros.,

SANDWICH, (Cape Cod,) MASS.

Washington.

The Florists' Club of Washington held its annual election March 3, resulting in the re-election of Robt. Bowdler as president; Philip Gages, vice-president; Adolphus Gude, treasurer and Eugene Cadmus, corresponding secretary. John Clarke was elected recording secretary in place of his brother William who declined.

After the election the club and the guests to the number of thirty sat down to a dinner. The table was decorated very prettily without any pretension to be an example of the way it is done in Washington. However one plaque of American Beauties would have held its own with any short stemmed exhibit of them. The occasion seemed to be thoroughly enjoyed by all present; songs and speech making enlivened the proceedings, Mr. Oliver making quite a hit with a couple of Scotch ballads. Among the guests were Mr. Robt. Halliday of Baltimore and Mrs. Thomas Field of Field Bros., Washington. There seemed to be no lack of enthusiasm for our coming chrysanthemum show next fall and it was the topic of several speeches. Unity and social occasions like this are rapidly bringing the florists of Washington to know and appreciate each other far better than in former days.

MAIL YOUR adv. at once for our double Easter number to be issued next week. It will be the handsomest number of the FLORIST ever issued and will go to every name in the American trade.

NEARLY a ton and a half (2,970 lbs.) of paper will be required for our special Easter number.

ROSES.

Roses bought now for \$40 per 1000, or \$35 if our selection. Will net the purchaser over 100 per cent. by Spring.

IMPORTANT TO ALL FLORISTS.

Our new trade list of 50 pages and our descriptive catalogue of 100 pages is now being mailed to you. Should you not receive a copy within a few days, notify us and we will send you one.

Without any desire to brag we assure you we have the largest and best collection of Chrysanthemums in the country.

All stock is bloomed before propagated from. Our list contains over 600 varieties. We also publish a list of synonyms in our catalog.

Pamphlet of "Summer Flowering Bulbs" 20 pages mailed on application. Price \$3 per 100. Our name does not appear in the pamphlet, therefore it is highly valuable for those having a counter trade. Our list of dormant bulbs is the largest and finest of any in the country.

We have so much of interest to florists and others in our catalog that we cannot begin to mention any.

Blanche Ferry Sweet Pea, proved of great value last year as a cut flower. We have a large stock of fresh seed at 10 cents per oz.; \$1.00 per lb.

You will bear in mind we told you last year that Chrysanthemum V. H. Hallock was a good one. You will hear from this later on. We also recommended Charity and White Cap on our last year's set as being particularly valuable for florists' use. Prices in quantity on application.

THE NEW ROSE WABAN.

This very valuable rose originated at the Waban Conservatories of E. M. Wood & Co., Natick, Mass. It is a SPORT from Catherine Mermet and identical with that variety in every characteristic, excepting color, which is a rich, deep, BRIGHT PINK; it sustains the same relation to its parent as Duchess of Albany does to La France. The only objection to C. Mermet is its frequently pale, insipid color in cloudy weather; experience has shown that the WABAN retains its deep rich color in all kinds of weather; it will, without doubt, prove to be as valuable as THE BRIDE which is also a sport from the same magnificent variety.

IT HAS ALREADY RECEIVED THE SILVER MEDAL

of the Massachusetts Horticultural Society, of the Pennsylvania Horticultural Society, and **Certificate of Merit** from each of the Societies in this country and Canada where it has been shown.

ALL OF THE STOCK READY FOR DISTRIBUTION APRIL 15th IS SOLD.

On and after this date (March 12th) orders received for a limited number of good, healthy plants, ready for delivery May 15th, 1891. **ORDER EARLY.**

ORDERS BOOKED NOW, WILL BE FILLED IN STRICT ROTATION.

THE CARNATION CONTROVERSY.

The discussion upon the merits of Lamborn and Hinze's White should not degenerate into a personal controversy, as then the matter ceases to be of general interest and we should be obliged to terminate it so far as our columns are concerned. Much of the data which has been brought out during the discussion is of considerable value and so long as an occasional ray of new light is thrown on the situation we are content, but we must beg our correspondents to remember that pure personalities are not discussion nor argument. Honest criticism we want but sarcastic flings that are designed merely to irritate and accomplish nothing else, we positively will not admit to our columns. A number of communications of this character that reached us went direct to the wastebasket and any more received will take the same course.

The real point at issue is the comparative value of Hinze's White and Lamborn as producers of cut flowers.

We hope that the competitive exhibition may take place and the best flower carry off the honors. But that will not settle the question by any means. Lamborn has undoubtedly done better than Hinze's with Mr. Chitty, but it is equally certain that Hinze's has done better than Lamborn with other growers. In some sections Hinze's is a cropper and in others it is a continuous bloomer. The causes of these differences are what we should now seek. Are they in the treatment, or in the soil and other conditions? We would suggest that in any further discussion on the comparative value of these or any other sorts our correspondents give a description of the soil and also of the treatment if it varies any from that usually followed. Some very interesting facts might be brought to light in this way—facts that would enable us to work more intelligently and effectively in the future.

WE ARE GLAD to note that several florists are devoting some of their spare time to photography. We have received quite a few photographs of late made by the senders who are florists. Mr. C. B. Whitnall, of Milwaukee has sent us several and he finds his camera very useful. Of course in many of these amateur attempts the focus is bad and they are not good enough for reproduction by the halftone process, still they are of value. We believe that the camera is destined to play an important part in floriculture in the future. What a valuable record a grower would have if he could have a photograph of his house of roses, carnations, or other plants, taken every few weeks, thus preserving for future reference a complete picture of the growth and

bloom at every season. Each photograph should of course be dated and the collection arranged according to dates. He could then at any time refer back to a previous year's photographs and see whether his present year's growth or crop of bloom was equal or less than at the same date the year before. He wouldn't have to guess at it, he would know. The day may come when we can present to our readers a weekly view of the condition at date of the new plants being grown in the experimental greenhouses which the AMERICAN FLORIST may in the future build and conduct in the interest of the trade.

WHEN SENDING us flowers for inspection please do not fail to give your name and address with the prefix "from" on the outside of the package so we may know at once who the package is from. The mail received at this office is very large and as the package and your accompanying letter are rarely received together, unless the name is given on the package it is sometimes impossible to identify the package to which reference is made, especially when a number arrive at the same time, each containing "a seedling carnation" or varieties of some other flower. If the weight is not so great as to make the postage at letter rates very high, better enclose the letter right in the package and stamp at rate of 2 cents an ounce. Then there will be no possibility of failure to identify. And by the way flowers sent us by mail very rarely reach us in even fair condition. Even when coming only a short distance by mail they are almost always sadly shrivelled, and it is simply guess work trying to determine what they were like when fresh. Better send by express if at all and enclose your letter in the package.

COST OF PRODUCTION.—We are pleased to note the increased interest in this important matter. But in estimating profits on the growing of cut flowers the basis should certainly be the current wholesale prices. If a florist conducts a store in connection with his greenhouses the profits of the store should not be credited to the greenhouses. Flowers grown should be charged to the store at the same rates a retail dealer pays in the regular course of business, and when there is a surplus unsold a fair proportion of the waste should be charged back to the greenhouses. Each department of your business should stand on its own merits.

THE VIOLET DISEASE is still with us, but the enormous crop of bloom sent to market this season would indicate that it has been much less virulent than in recent years. Some who were formerly seriously troubled by the disease have been comparatively free this season, and even where the disease had a foothold very good crops of flowers were obtained. Has the violet disease about run its course?

TRADE LISTS published in the AMERICAN FLORIST are bound in with the paper and are of permanent value. Of those which reach the trade otherwise many go into the wastebasket, and some into an obscure pigeon-hole. Which way are you going to circulate your trade list?

TWO FAIR sized blooms of a carnation a little deeper in color than Garfield have been received from the Logansport Floral Co., Logansport, Ind. They state that it is a sport from Hinze's White, which it resembles in growth and every other respect excepting color.

THAT ITEM about the flower discovered in Central America, which changes color three times a day (red, white and blue) is again making the rounds of the dailies. It occurs in an eastern paper pleasantly close to an advertisement of a cure for "short breath, pain in the chest" etc.

MR. JOHN THORPE who has been in poor health for the past three months is beginning to feel more like his old self again. He expects to have his new book, "The Chrysanthemum," ready for publication early next fall.

WHEN writing to advertisers please mention the fact that you were induced to write by the advertisement in the AMERICAN FLORIST. You will benefit us by letting advertisers know that it is the FLORIST that is bringing them trade.

THIS is the last call for ads. in the Easter number. Copy must be mailed at once on receipt of this issue to reach us in time. We shall close on Monday, the 16th, at noon for the last forms.

IF YOU LIKE the AMERICAN FLORIST give it your fullest support by confining your orders to those who advertise in its columns and mention the paper when ordering.

☞ The Seed Trade. ☞

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president, JOHN POTTLER, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1891.

Seed Warranty Again.

We all admit that Boston is the hub and that all ideas primarily come from that source. The Boston seedsmen are just now having an interesting discussion about seed warranty. A or rather B prints in his catalogue the following:

A PRACTICAL WARRANTY.

"The keen competition that of late years has crept into the seed business unquestionably has reduced prices, but it has in no way been an advantage to the planter; it has rather emphasized the mercantile tendency to buy in the cheapest market, so that, although lower quotations are made, the average profit is maintained the same. This must be done with the deteriorated strains, which are always most prolific of seed, being sold to the consumer, and he alone realizes and can tell with what fearful results. The increased acreage under cultivation, the tendency to lower prices for all the products of the soil, are indications that the farmer must give over all old time methods, and set to work with more force and science. A greater discrimination must be exercised in using expensive chemical fertilizers, assurance must be had that the seeds he sows have not only germinating power, but are the sorts claimed, if paying crops are to be harvested. The products of the European and Californian seed farms are not, in most cases, suited to our uncertain climates, although they are a great temptation alike to the ignorant and unprincipled wholesale dealer who supplies the small retailers with package seeds on commission or the still cheaper rubbishian bulk. To remedy this evil, which is admitted by all to exist in the seed trade, we now propose to adopt a system of guaranteeing all seeds sold by us direct to the consumer as follows: First, our seeds are guaranteed pure and clean, and of the percentage of vitality named on the label accompanying and describing contents of each package. Second, this guaranty is subject to the test and analysis of the Botanist of any of the State experiment stations, and to properly authenticated complaint being made to us within twenty days from time of purchase of seeds complained of. If the result of the analysis does not confirm the guaranty, we will take back the seeds, and refund the money paid for them, and pay the cost of transportation both ways. Third, seeds once sown, or the above specified time for complaint having expired, our responsibility ceases. The results in field culture depend upon so many things besides the quality of the seeds, that the growth and crop cannot be guaranteed. The advantages of this method of guaranty will at once be apparent to the careful farmer; it will give security as to vitality, freedom from noxious weeds, and, to some extent, confidence as to varieties planted; in short by obtaining seeds a few days before they are required for planting, you can have, without cost (for we assume expenses if results of test are unsatisfactory), a warranty against everything except the visitations of Providence. The above guaranty of quality, coupled with our low prices and special offers, will, we venture to predict, be taken advantage of by many farmers and gardeners who

in past years have suffered much loss and disappointment, and cause them not only to give our seeds a trial, but to become permanent customers."

Later E or rather F prints the following adv. in the newspapers.

WARRANTING SEEDS!

"Do not be deceived by smooth words and ingeniously constructed sentences, which mean nothing when analyzed. When any article is sold with a guarantee or warranty, an assurance presumed to be given by the seller to the effect that the article sold shall fully serve the purpose for which it was intended. The farmer purchases and sows seeds with the expectation of a crop that will yield a fair return for time, labor and money invested. If his crop fails, does he expect or will he receive from the seller of the seeds under any so called warranty any satisfaction equivalent? Not at all; he can have more seeds to replace those which failed, if he cares to put his trust in such. Or if he has doubts as to the quality of seeds purchased, he can return them and get his money back, which is very little satisfaction. But if he plants his seeds he must do so at his own risk. The warranty is all a pretence and not worth the paper that it is printed on. The only safeguards that can be relied on by the purchaser of seeds can be very briefly summed up.

"First, the honesty of the seedsmen.

"Second, the painstaking care with which he manages his business.

"We believe in honest representation, and we never intend to make misleading statements in order to sell our goods. The so called warranting of seeds should be fully exposed, and we are in a position to meet any criticism our statements may call for."

Further developments are expected.

O Yes, Certainly.

Gath writing of the Agricultural Department, Washington letter to the Cincinnati *Enquirer* says:

"The department is still a bureau to all influential intents and its principal utility is in the distribution of seeds, where it is a corrective upon the seedsmen, a good many of whose packages are found on being planted to be in the light of wooden nutmegs or wooden oats, and will not grow. This may be due to the carelessness of the clerks in the seedsmen's stores; but I have had plenty of experience in the last six years that seeds will not seed."

"A great agricultural department would distribute many things to be effective in this world, just as many of our seeds and species have been sent to other countries."

[The deep clear reasoning in this last paragraph and the logic supporting it is something wonderful.—Ed.]

The Catalogue Tax.

Mr. Elias Mott writes from Norwich to the *Toronto Globe*—It may be you have heard before this of the "seed catalogue racket" that our moribund Government are playing on the farmers and others of this Dominion. It is a well known fact that tens of thousands of American seed catalogues have been distributed in this country every year, but it now happens that these, which have been formerly freely delivered through the postoffice, all find their way into the capacious maw of the custom house, and we farmers are now receiving daily thousands of notices to this effect:—"Parcel in bond here for you; charges five cents. Return this card with the amount and parcel will be

forwarded." The charges vary from five cents to fifteen cents, and sometimes the "parcel" is called a "book." You can imagine the farmer's disgust, on innocently being caught in this little trap, better than I can describe it. I have now on hand about a dozen of these notices, but I will generously present the "Old Man" with the catalogues in the interests of the Experimental Farm at Ottawa, though I doubt if they will be of any use to him after the 5th of March next. This is only another example of the beauties of the N. P.

ST. THOMAS, ONTARIO, March 4, 1891.

—On the statement of Mr. I. Turville here I learned that many seed catalogues from U. S. were being held at the custom department of the postoffice for duty, the same having been levied at the rate of 20 cents per pound, with 15 cents extra for all illustrated catalogues. I have found this to be a fact and after further investigation am of the opinion that there will be from this office alone a wagon load of beautiful catalogues from U. S. seedsmen sold for waste paper at the end of the season. It occurs to me that the Canadian government is violating its postal treaty with the U. S. If the attention of the U. S. authorities at Washington was called to this the matter might be corrected, as this condition is too evidently spite work of some Canadian seedsmen.

J. E. K.

AM. FLORIST.—Some of the catalogue men add two or three things this year I should not like to catch a fellow planting on my grounds. *Calestegia pubescens*, it is truly said, "when once got you always have it," and might add—will give more to get rid of it than the 20 cents paid. Even so with that wild cucumber vine. I fought them all my younger days and they are there yet, or were when I moved away. They do not lie about these vines, but do not tell the whole truth.

N.

BOSTON, FEB. 27.—Your interesting articles on advertising have been carefully read and are certain to benefit the trade. We have been a subscriber to the *FLORIST* from the first and would not like to be without it. It is a good live journal and of inestimable value to the florists. The South Market street stores are doing a larger mailing business than usual. Orders are averaging larger than last year, though it is rather early yet for our trade.

J.

LONDON, ONTARIO.—Mr. Jas Griffin has reopened his seed store at 171 King St., having been burned out the night of February 28th, at his old stand, 215 Dundas St.

E. B. CLARK, of Milford, Conn., has associated with him in business, under the firm name of Everett B. Clark & Son, Herbert A. Clark and Walter E. Clark.

MR. OSCAR WILL, the seedsmen of Bismarck, N. D., has been appointed a member of the State Board of Agriculture of North Dakota.

S. L. SHELTON & Co., implement and seed dealers at Madison, Wis., burned out March 3. Reported loss \$15,000, mostly insured.

RAILROADS governed by the Central Traffic Association are reported to have lowered classification on sweet corn.

MAJ. CHAS. P. BRASLAN and Mr. Geo. S. Haskell, lately made a flying trip to Philadelphia and New York.

FRED. ROEMER,
SEED GROWER
Quedlinburg, Germany.

Substantial Rose House.

Last fall I built a rose house which I believe to be as good a wooden green-house as was ever erected. It is 75x20 feet, three-quarter span, north wall 8 feet high, and south wall 4 feet, north side of roof 9 feet and south side 18 feet.

All locust posts were used, each post 5 inches square, and the plates and all the lumber above the plates is cypress. Locust is also used for the front of the benches inside the house.

I run my four steam pipes on the front of the front bench resting across 1-inch pipe set in an auger hole in every second 2 feet of the front bench. As the foot is locust wood I will not have to change them for many years as locust will last from 20 to 40 years outside for fence posts.

All the siding is first growth pine, two thicknesses of paper between all. The houses are piped with 2-inch pipe for steam. My center bed is a solid bed 20 inches high with a 2-inch pipe all around it, four pipes in front and two more pipes hanging on the back posts down low. That makes nine 2-inch pipes, four under the south bench, one around center bed, two on back wall and one on the top near glass, under the ridge.

I have one old house 115x25 feet heated by hot water. I do not feel like giving up the hot water yet.

JOHN RALPH.

— ORIGINAL AND LARGEST GROWERS OF —
LILIUM HARRISII, BETTER KNOWN AS **THE BERMUDA EASTER LILY**.
 BULBS NOW READY FOR DELIVERY.

THE BEST IN THE WORLD FOR FORCING FOR WINTER FLOWERS. WE OFFER ONLY STRONG FIELD-GROWN BULBS FROM OUR OWN GROUNDS IN BERMUDA.

COPYRIGHTED, 1890, BY F. R. PIERSON, TARRYTOWN, N. Y.

From a photograph taken the week before Easter, 1890, showing a view in one of our new iron greenhouses, here at Tarrytown, 20 feet in width by 120 in length, of a crop of *Liliium Harrisii* in full bloom. This house produced over 15,000 flowers for Easter.

This is not only the best by far of all lilies for winter blooming, but it is one of the most profitable flowers that can be grown by florists. It is very easily handled, and the flowers being especially effective for decorative purposes, always command large prices. From its name some have thought it was a bulb for florists' use for forcing for the Easter market only. This is not exclusively so; it derives its name from the fact that, in Bermuda, grown in the open ground, it blooms at Easter time—hence the name "Bermuda Easter Lily"—but by growing it in this country in the greenhouse, with successive lots, it can be had in bloom all the winter from early in December until after Easter; in fact, by special culture, all the year round, or as long as cut flowers are in demand. The fact that it can be forced into bloom by the Christmas holidays adds particularly to its value, as it fits in at a time when flowers are usually scarce and in great demand at high prices, but to accomplish this the bulb must be potted early in August, something depending upon after treatment and the temperature the bulbs are grown in.

For this purpose our Bermuda-grown bulbs are indispensable, as in Bermuda the bulb reaches its fullest development, and ripens off perfectly, and is ready for shipment usually by the middle of July—before bulbs in our own country have hardly begun to make their growth. Our bulbs being grown in the open ground, in a climate naturally adapted for their perfect growth, are particularly strong and healthy at any time.

The extent to which this Lily is being forced for winter flowers will be shown by a sale made by us to a large New York grower, who purchased 20,000 bulbs for his own use. We hear it said occasionally that *Liliium Harrisii* flowers will not keep—this is owing to improper handling. If cut as soon as open they can be kept for more than two weeks if in a proper place. It bears shipping splendidly, as the two following letters will show. These were written acknowledging the receipt of flowers shipped last Easter.

"I, L. Russell, Denver, Colo., writes: 'The Lilies came in excellent shape. I don't think I lost one; it is a pretty good recommendation for your packing.'"
 "The Fort Worth Nursery Seed and Canning Co., Dallas, Texas, writes: 'The Lilies arrived in perfect condition, and we must compliment you on your packing. We would not have thought they would have carried so far packed dry.'"

THIS VALUABLE LILY IS OUR SPECIALTY.

We grow the bulbs by the acre on our own grounds in Bermuda. We were the first to grow it in large quantities and to offer it at reasonable prices, and we have always been recognized by the trade as **HEADQUARTERS FOR THE BERMUDA EASTER LILY**; supplying the trade as we do, both in this country and in Europe, and we hold by far the largest and the controlling stock of the genuine variety in the market.

The extent of our operations in this bulb alone will be best understood when we state that we expect to sell from OUR CROP of 1890, over

— **HALF A MILLION BULBS.** —

Be sure you get the genuine *Liliium Harrisii*. In order to secure "the true variety," purchase your Bulbs from original stock, which is known to be pure. The value of this Lily has led unscrupulous or ignorant parties to plant *L. Longiflorum* in Bermuda, planting it with *Harrisii* to increase their stock rapidly when *Harrisii* was very scarce, thus mixing the stock irretrievably, thereby rendering it absolutely valueless for forcing, and we have known instances where these mixed bulbs have been sold to large growers as the genuine variety, where large loss has resulted, and dealers should look with suspicion on bulbs offered at prices less than market rates, as the supply has never yet met the demand. "Mixed Bulbs" only being offered at reduced rates.

Large growers or dealers in this bulb should write us for special prices, stating quantity of bulbs desired, and we will give lowest estimate on the same by return mail.

F. R. PIERSON & CO., TARRYTOWN, NEW YORK, U. S. A.

OUR FREESIA BULBS ARE NOW READY FOR DELIVERY. They are of unusually fine quality, nearly twice the size of Bulbs usually sent out. Intending purchasers should write us for samples and prices, stating quantity wanted.

Forcing Romans and Narcissus.

Will some one be so kind as to tell me through the FLORIST the way to treat narcissus and Roman hyacinths to get them in early—say the first of December, or even by Christmas?

I boxed a lot of narcissus and Romans about the first of September last, left them out doors for five or six weeks. They got a light frost but not enough to freeze the ground. Then I took them in and tried to force them. Some of these same narcissus are not in flower yet and the Romans were never any good. Other bulbs of both that I put in later did well. And some of the same lot of bulbs put in not a month ago are now almost in flower—that is, the Von Sion—I did not grow any other kind of narcissus this winter.

Would it do any good to freeze the bulbs in September, before planting? And is there any difference in the Von Sion as to earliness. Are there two varieties, one earlier than the other?

New Haven, Conn. ENQUIRER.

Wall Flowers.

Will some of the readers of the AMERICAN FLORIST please tell me when wall flowers bloom in America, and when the seed should be sown. Do they stand the summer sun here? I have had no experience in growing the wall flower out of doors in this country though have often flowered them in a carnation house all winter. In England they grow all over on rocks and walls all winter and may be had in bloom nearly all the year round by sowing seed in succession.

Yonkers, N. Y. SUBSCRIBER.

Rooted Cuttings Carnations.

We offer **EDELWEISS**, a pure white sport of Chester Pride for the first time this season, @ \$1.50 per dozen; \$10.00 per 100. Send for circular of leading varieties and several new seedlings of merit.

S. B. FIELD, Roselle, N. J.

Chicago.

Trade is about as dull as it well can be. The regular Lenten stagnation is here. There is a good supply of all flowers and a tremendous glut of lilies and tulips. In fact there is a big surplus of all bulbous flowers except daffodils and valley. The surplus of violets is also large. There has been an immense number of daffodils sold this season, and the sales of carnations have also exceeded those of previous seasons, but tulips are sadly in the dumps at present. The snailax glut has passed and a market is now found at a fair price for all sent in.

There promises to be a tremendous supply of lilies for Easter and it is probable that Easter prices on this stock will be considerably below those of last year. The Easter supply of all flowers will undoubtedly be fully equal to the demand except possibly roses and carnations and the shortage, if any, on them will be slight from present indications.

D. B. Fuller is sending in from his new place at Downer's Grove some of the finest carnations ever seen in the market. Mr. Fuller has some 3,000 pot plants of lilies—candidum and Harrisii—for Easter.

Mr. W. A. Manda of Pitcher & Manda, Short Hills, N. J. spent a few days in the city early in the week.

Mr. Chas. Reissig has in bloom in his orchid house a white form of Cattleya Triana which it is thought may be a rarity. Flowers have been forwarded to experts to determine whether or not it is especially rare. Mr. Reissig has been rather under the weather for the last few weeks, so much so that he has remained at his home at Riverside and has not ventured to visit his city store.

FRESH, FANCY FLOWER SEEDS.

JOHN LAING & SONS,

Begonia Specialists, Etc.,

FOREST HILL, S. E. LONDON, ENGLAND.

Begonias! Begonias! Begonias!

I was one of the first in England to handle Begonias, and for some years immense quantities passed through my packing sheds annually, and I was very sorry to be compelled to relinquish their cultivation; **HARDY PLANTS** then demanded all my attention, and these were first, but I have always "kept touch" with the Begonias, as I made up my mind to "pick them up" at the first opportunity. For some time past I have been assiduously working at the **BEGONIA**, I have also been gathering from every known source everything considered superior, and I trust ere long to make my collection second to none. I purpose making

BEGONIAS A GREAT SPECIALTY AT TOTTENHAM.

My knowledge of this family is wide and the facilities for knowing every collection, both private and public, in England and the Continent, has enabled me to secure everything that I consider of great value, especially those possessing **NEW POINTS OF MERIT**, as my aim will be to **WONDERFULLY IMPROVE THE BEGONIA**. I am convinced that but few people can have yet any conception of the capabilities of the plant. I have an **IMMENSE STOCK OF SINGLES AND DOUBLES**, all carefully graded last season, containing every shade of color and those which yield flowers of the largest size combined with perfection of form and improvement of type. In the hope of further developing this attractive flowering plant, I shall plant some hundreds of thousands for next season's show, and I shall be very pleased to exhibit them to any of my friends, who, I am sure, will be surprised at both quality and quantity. **SPECIAL PRICES** for Tubers for present delivery on application.

DAFFODILS AND NARCISSESS.

I shall have an enormous quantity of these to offer for **Fall Delivery**. Special prices on application as the season advances.

THOMAS S. BAYRE, JR.

HALE FARM NURSERIES.

TOTTENHAM, LONDON, ENGLAND.

THE CHEAPEST AND BEST OF ALL.

FIR-TREE OIL INSECTICIDE—soluble.

FOR PLANTS.—To make a solution for washing or cleaning purposes—Half-a-Pint of Fir-Tree Oil to ten gallons of water.

For Green and Black Fly, Thrip, American Blight, Woolly Aphis, etc.—Half-a-pint of the Fir-Tree Oil to two or four gallons of water, or two or three table-spoonfuls to the pint.

For Red Spider and Caterpillar—Half-a-pint of the Fir-Tree Oil to two gallons of water, or three table-spoonfuls to the pint.

For Mealy Bug, Brown or White Scale—Half-a-Pint of the Fir-Tree Oil to four or six quarts of water, four to eight table-spoonfuls to the pint.

For Mildew and Blight on Fruit or Foliage—Half-a-Pint of the Fir-Tree Oil to a gallon of water, or six table-spoonfuls to the pint.

Used with warm water it is quicker in its action than when cold is used.

Soft or rain water is necessary, and Applied with Wagon Tin or Pot Vessels.—Unvalued Iron Vessels must not be used.

FOR ANIMALS.—For Skin Diseases and Killing Vermin mix one part of Fir-Tree Oil with three parts of warm water and wet the affected part each day. In some cases it may be used stronger. For Ring-worm apply full strength with a brush each day.

FOR BIRDS INFECTED WITH PARASITES.—Put a table-spoonful of Fir-Tree Oil in one quart of warm water and dip the bird in it, taking care that its eyes are protected, hold the bird in one hand for one minute, then dip into clean tepid water; this may be repeated, if necessary a much weaker solution may be used by any producer.

THE NURSERY BOOK

A Complete Hand-Book of Propagation and Pollination. By L. H. BAILEY, Editor of the American Gardener.

This valuable little manual has been compiled at great pains. The author has had unusual facilities for its preparation, having been aided by many experts in many directions. The book is absolutely devoid of theory and speculation. It has nothing to do with plant physiology, nor with any abstruse reasons of plant growth. It simply tells plainly and briefly what every one who sows a seed, makes a cutting, sets a graft, or crosses a flower wants to know. It is entirely new and original in method and matter. The cuts number almost 100, and are made especially for it, direct from nature. The book treats of all kinds of cultivated plants, fruits, vegetables, greenhouse plants, hardy herbs, ornamental trees and shrubs, forest trees.

Among the contents are the following:

PROPAGATION BY SEED.

PROPAGATION BY SEPARATION.

PROPAGATION BY LAYERS.

PROPAGATION BY POLLINATION.

THE NURSERY LIST is an alphabetical list of all kinds of plants, with a short statement telling which of the operations described in the first five chapters are employed in propagating them. **Over 2,000 Entries** are made in the list. The following entries will give an idea of the method:

ACER (MAPLE). *Sapindaceae*. Stocks are grown from stratified seeds, which should be sown in inch or two deep; or some species, as *A. dasycarpum*, come readily if seeds are simply sown as soon as ripe. Some cultural varieties are layered, but better plants are obtained by grafting. Varieties of native species are worked upon common or native stocks. The Japanese sorts are winter-worked upon imported *A. polymorphum* stocks, either by whip or veneer-grafting. Maples can also be budded in summer, and they grow readily from cuttings of both ripe and softwood.

PHYLOCACTUS, PHYLOCEREUS, DISOCACTUS (LEAF CACTUS). *Cactaceae*. Fresh seeds grow readily. Sow in rather sandy soil, which is well drained, and apply water as for common seeds. When the seedlings appear, remove to a light position. Cuttings from mature shoots, three to six inches in length, root readily in sharp sand. Give a temperature of about 60°, and apply only sufficient water to keep from flagging. If the cuttings are very juicy, they may be laid on dry sand for several days before planting.

GOOSEBERRY. Seeds, for the raising of new varieties should be sown as soon as well cured, in loamy or sandy soil, or they may be stratified and sown together with the sand in the spring. Cuttings, 6 to 8 inches long of the mature wood, inserted two-thirds their length, usually grow readily, especially if taken in August or September and stored during winter. Stronger plants are usually obtained by layers, and the English varieties are nearly always layered in this country. Mound-layering is usually employed, the English varieties being allowed to remain in layers two years, but the American varieties only one (Fig. 27). Layered plants are usually set in nursery rows for a year after removal from the stools. Green-layering during summer is sometimes practiced for new or rare varieties.

Price, in library style, cloth, wide margins. \$1; Pocket style, paper, narrow margins, 50 cts.

A Problem.

An eastern subscriber sends us a communication in which he states that one of the wholesale commission dealers in cut flowers has added a design department and is doing practically a retail as well as a wholesale business. He contends that the dealer has a legal right to conduct a retail as well as a wholesale commission business, but questions his moral right to do so, and wants to know whether the readers of the FLORIST do not agree with him. He says:

"I might send to that firm pinks, roses and smilax to be sold on commission. They could, as they are now doing, take these flowers, make them up into any funeral design wanted, allow me what they pleased for the flowers sent, charge a less price for the design than I could make it for, and send it to my immediate vicinity, which would not only injure my trade but would I claim be to me a great wrong in taking my retail trade from me under the name of wholesale commission men. The retail florist as well as the grower is interested in this problem. If the men who receive flowers on commission to sell at wholesale to the retail trade run a cut flower store and make up designs the same as the ones who buy of them do, I think they would not be so very particular about the amount returned as sales."

Steam Heating.

I asked through your paper last fall how long a steam boiler could be left at night without attention. Last summer I had all my piping changed. I have now one 2-inch pipe running through the top of the greenhouse, up near the ridge, all the other 2-inch pipes are under the benches. My boiler is a large size surface burner. It is recommended to heat 55,000 to 82,500 cubic feet of space. I have now five houses heated by it, two rose houses, one 50x20 and the other 75x20; three small houses 50x11 feet each. I have the fire built from 8:30 to 9 p. m. and get up steam in about one half hour. Then I regulate or put on pipes enough for the night. I leave it before 10 o'clock p. m.; it then carries steam without more attention until about 7 a. m. next morning. It is trimmed with steam gauge, water gauge, cocks, safety valves, automatic damper, regulator, etc. It runs ten hours from the time the fire is built at night until it is rebuilt in the morning.

OUR TITLE PAGE

How do you like the title page of this issue? We consider it not only strikingly beautiful and expressive of the season from the florist's standpoint, but a triumph of the engraver's and the printer's art.

The group of decorative and flowering plants was arranged and photographed specially for our title page and to our mind it most forcibly demonstrates the fact that nature herself furnishes by far the most effective and beautiful material for an ornamental design. How the product of the artist's brush or pencil pales before this simple, faithful reproduction of nature's own grace and beauty! Here art has simply brought together in an arrangement pleasing and grateful to the eye a few of the forms of beauty that boundless nature has so freely given us, and has exercised its true function in simply permitting nature to give full expression to her charms.

The arrangement of the group shown is worthy of a careful study. It is a beautiful exposition of true art in the arrangements of plants; to most effectively display the grace and beauty of each individual while combining all into an harmonious whole.

At the top are specimens of *Arcea Intescens* and a tall lily while just below appear a plant each of *Pandanus Vetchii* and *Kentia Fosteriana*; the two broad-leaved dracaenas are *D. fragrans*, each flanked by specimens of *Aranea excelsa*, while at the base appear blooming plants of genistas and heaths and small plants of *pandanus*. Back of the bunch of lilies in the center are blooming plants of the "Paris daisy."

WE PROMISED to make our Easter number the handsomest issue of the AMERICAN FLORIST ever published, and we believe you will agree with us that it is all that was promised. Each copy of this issue has been mailed in a separate wrapper to guard against possible injury in the mails and to avoid marring the beautiful title page with the printed address label.

Our Illustrations.

In this issue we present engravings of a large number of orchid flowers. All the sorts shown are not illustrated because of their value as cut flowers, for many of them are of no value for that purpose or are so high priced as to be beyond the reach of the commercial florist; they are shown merely to give to that large portion of our readers who have but little if any acquaintance with orchids, some idea of the wonderfully varied forms of these often exquisitely beautiful and again frequently strange, curious and fantastic productions of nature.

The colors of the flowers range from the most beautiful and pleasing shades imaginable to dull browns and even blacks and greens; in fact the shades of color are as varied and often as strange and surprising as the forms of the flowers.

In the groups of flowers of a single genera we have endeavored to show as many different forms of the type as possible from the material at hand, the illustrations being engraved mainly from colored plates issued with *Lindena*, a publication devoted exclusively to orchids. While we have been unable to reproduce the colors, the forms of the flowers and their markings are accurately shown, though all are more or less reduced in size.

As can be readily imagined the cost of so many beautifully executed engravings has been very considerable, but we feel assured that they will be so well appreciated by our readers as to fully repay us for the money and time expended.

Orchids for Cut Flowers.

The increasing demand for orchids as cut flowers induced us a few years ago to grow a number of winter flowering varieties; we find them but very little trouble and they occupy very little valuable space. In winter they do well suspended in a palm house from the roof and get only a daily syringing at the same time the palms get their watering. Few other plants would do well if orchids were suspended rather thickly over them, but palms will not show any ill effects as they require copious watering and syringing nearly every day in the year and are rather benefited by the little shade these suspended plants throw over them.

We grow most everything on blocks or in baskets to save bench room. Our cattleyas are all suspended, even those in pots; we lay a wire around the pot and attach three longer pieces twisted together at the upper end into a loop, and hang them up. Another advantage in suspending is that snails, wood lice and cockroaches, so destructive to all kinds of orchids in most houses, can not possibly reach the plants and we are never bothered with either of these pests on the suspended plants. In our practice we have found cattleyas to do best on apple wood with very little or no moss at all; strong roots from them one and a half feet long, hanging in bunches a way down below the block and these roots keep in a healthy condition, while potted plants will show more or less decayed roots in the pots or on the surface of the dressing. The treatment in summer is little different only more water is given.

I have an old sash house with plenty of woodwork in the roof and small sized glass, where I keep azaleas in winter. By the middle of May the azaleas are turned out doors and after cleaning the house thoroughly all cattleyas and other heat loving orchids are hung up in this structure, the glass is shaded with naptha and white lead and the plants are syringed once or twice a day, giving abundance of air in bright weather until the time arrives for the azaleas to go into winter quarters again. By this time the orchids will have finished their growth and are removed to the palm house again.

We also grow a lot of cypripediums, mostly *C. insigne*, but have to give them bench room. Among them are a few very good ones of the Chantini and albo-margium type, which we got accidentally two years ago in a lot of newly imported stock, one plant being identical with *C. insigne* Kimballianum, another is an extra large sized Chantini, much larger than the type. There were about 50 plants in the lot and no two of them are exactly alike, they all differ in some feature. I purchased them at the time from Mr. F. Mau, and it is a mystery to many of us how and why this particular importation should have been so varied, while others would not bring us any but the old common *insigne* or the *Sylhetensis*.

Another freak I have is a pure white *Saccolabium gigantum* in bloom now for the first time. I bought it for *gigantum*, and in habit and foliage it is not distinguishable from the type, at least I consider it a rarity, for I have never seen or heard of a pure white one before. Can some specialist give me a name for it? I should be very thankful.

J. B. KELLER.

Another season of orchid experience is now here. I am often asked whether the orchid flowers are now popular on ordinary as well as extraordinary occasions; my answer to such inquiries invariably is that if I had four times the quantity I could have disposed of them this season at remunerative prices.

I am continually adding to my stock in the leading cut flower varieties of orchids and it seems the more I grow of them the less trouble I have in their cultivation and management. I know it will be a surprise to many when I say that I am cultivating four houses of them, each house 70 to 80 feet, with one young man and a boy, excepting in the potting season when two or three hands are added to the force so as to make a short job of it.

As soon as a crop of flowers is cut from a species the plants are carefully put in either a place to rest in a cooler house or put into stronger heat and more moisture according to their requirements. Those for rest are placed in the roof and ends of cool houses, "no water," the moisture from syringing plants in the house being enough to prevent shrivelling.

The resting of the orchid is the greatest secret in their cultivation. Many species that are considered hard to flow-r and grow by many people suffer much from too kind treatment when they should be entirely left alone in a cool temperature. This rule applies to *lilias*, *Odontoglossum grande*, *lilias*, *lilias*, many of the Mexican and South American orchids.

Dendrobium nobile and *D. Wardianum*, the two best varieties for cut flower trade, should be gradually rested from October 15 in a temperature of 45° to 50° with just enough moisture to prevent shrivelling. About the beginning of the year many of them will be showing flower

*C. Crossianum.**C. Villosum.*

CYPRIPEDIUMS.

*C. Druryi.**C. Cannartianum.**C. Moensianum.**C. Maeserclianum.*

buds all up the stem of the last season's growth and can then be safely put into a temperature of 65° to 75°, when in from twenty to twenty-five days they will be in a blaze of flower. My plan is then to keep them growing slowly till towards spring, when they are plentifully supplied with heat and moisture till growths are finished and bulbs firm; then water is gradually withheld till they are stored away to their needed rest; they can then

be taken into the warm house in batches of twenty or thirty at a time to suit the wants of the cultivator.

Odontoglossum Pescatorei and *O. crispum* are among the very finest and most useful orchids in cool cultivation. I grow them by the thousand in a cool house sunk well into the ground, roof steep so as to admit overhead almost the year round either resting or growing plants as occasion requires. I find the

house ventilates easier by having a steep roof and plants overhead make just the kind of shade the *odontogloss* like. The side benches are solid, being cemented on the natural soil; over the cement are racks made of 2-inch strips on which the pots stand; in the summer season water is plentifully used on the cement benches, which supplies plenty of moisture. I think this much preferable to stagnant water in tanks so often seen in horticult-

tural establishments. Fresh water evaporated two or three times a day makes a much better moisture than that from stagnant water.

Odontoglosses are now pushing their flower spikes freely and the plants should be carefully looked over every day and those that are showing flower spikes should be carefully picked out and given a little more elevation, warmth and light, care being taken that they are not exposed fully to the sun's rays. Place a little loose cotton at the base of the flower stalk to prevent insects getting up to devour the buds. These little attentions are the means of much of the success in the cultivation of this lovely tribe of orchids; on the other hand if left alone they will bring nothing but disappointment and discouragement to the owner. I have seen odontoglossum collections where they were permitted to take care of themselves show proof that the small snails and wood lice etc. had eaten up a great percentage of the crop, then of course the cry goes up: "Oh, they are hard to flower." Do not over-pot this class of plants; do not let them get water logged; do not let them get dry; do not keep them sopped with wet. Keep them cool and out of the draughts and every plant will repay for the care that should be given them.

Care should be exercised at this season not to overheat the orchid houses. Give air by bottom ventilation on all suitable occasions, also by top ventilation on every mild day, but avoid draughts if the air is cold.

Cattleyas are now in their glory of bloom and should have attention by shading, gentle ventilation and waterings, keep paths and benches moist by frequent waterings; tie out the bloom, place cotton loosely at base of bloom stock, look out for scale which must be carefully kept in check. I find frequent fumigation a great preventive of scale, as the male fly does not like the fumes of tobacco. My practice is to smoke the house always once a week, and often twice when the crop of any species of cattleya has been cut, not hecantly so smoke damages the flower but because the smell of tobacco fumes are objectionable when carried in the flower.

Cypripediums should now be carefully looked over to see that they have proper drainage and the sphagnum that has become decayed should be removed, the pot washed and fresh sphagnum that is in growing condition (by being kept out doors) should be used as material for repotting. I find I can grow the cypripediums faster and better with nice fresh sphagnum and plenty of drainage than by any other way. Shade sufficiently so that they are not exposed to the direct rays of the sun, keep up plenty of moisture and a temperature of 58° to 70° and the cypripedium will prove a very satisfactory and interesting orchid to grow and will well repay all the efforts given to make their cultivation successful. Strange as it may seem, the hybrid varieties are more vigorous than natural species; all are as a rule easily grown and are now a much admired class of plants; their lasting qualities too are much appreciated by all lovers of choice flowers.

WM. MATHEWS.

WHEN writing to advertisers please mention the fact that you were induced to write by the advertisement in the AMERICAN FLORIST. You will benefit us by letting advertisers know that it is the FLORIST that is bringing them trade.

Questions Answered by Mr. Thorpe.

[The answers given were in response to questions asked Mr. Thorpe after the reading of his essay before the Massachusetts Horticultural Society.]

What is known of the new early varieties offered by European growers? This is a matter of importance to those who have no greenhouse.

Mr. Thorpe replied that with one or two exceptions, the early flowering varieties raised in Europe have not given satisfaction owing to their being unable to withstand the excessive heat of our summer. It will be reasonable to expect a few of the many early varieties offered by Deleaux will succeed but how many will have to be proved; the moist and temperate climate of France and England where chrysanthemums do well out of doors is very different from ours. If we desire to succeed in raising a series of early flowering varieties to withstand the variations and vicissitudes of our climate, we must raise our own seedlings and save none but what stand the ordeal they are subjected to. In other words they must be to the manner born. Deleaux claims for his set that they will begin to flower as early as July 15; we have already several pompons that would flower by that date providing they could be made to grow. I think what we require is a series beginning to flower not earlier than September 1, having the characteristics mentioned by me in my essay. M. E. Nichols is a variety having some of these good points; it is a sturdy grower, it has thick leathery leaves, the flowers are of medium size, rather undecided in color; it flowered about October 5. Harvest Queen is a good white as is also Middle Lacroix, flowering about October 15; the flowers of the last two named are much better when grown under glass.

Which is the best early variety for market cut flowers?

Mr. Thorpe said that depended upon what color is desired. If white, Jessica; the best yellow, Rohallion, followed by Gloriosum five days later or about October 15; it is astonishing how much difference five days make.

In reply to a question as to what variety remained longest in perfection, Mr. Thorpe said that depended on the time of year. The duration of bloom varies from fifteen to twenty days. By judicious selection and special cultivation chrysanthemums can be had in bloom from January 1 to December 31. The blooms probably will not all be up to first-class grade as to form, size, color and quality, as when flowered in the autumn, but will possess enough good points to make them acceptable. For ten years I have never been without chrysanthemum flowers. We have but to remember they are heraceous plants which when they start to grow, keep on until they produce buds and flowers, and if grown naturally, seeds, which complete their work. Do not think much is gained by thus interfering with their natural time of flowering as we know,

strawberries are best in June, just as chrysanthemums are best in November.

Is it wise to award prize medals for new varieties upon exhibition of the first flowers, or better to defer awards until the superior character of the new plant has been established?

Mr. Thorpe replied that the first year his seedling Mrs. Cleveland flowered he thought it a capital prize; it was propagated and sold the following spring; when it flowered the second year instead of proving itself a gem of the first water, it came down as low as third class. Yes, seedlings should always be tested more than one season and no prize be awarded to any until its superiority in character and habit is fully established. He said also that it is unwise for a grower to offer to the public any new plant or flower until its merits are shown to be greater than existing kinds, especially when varieties are so numerous and in many cases so excellent.

Is there any remedy that will kill the little hopper insect that so injures the plants out of doors during summer?

Mr. Thorpe said that Prof. E. V. Riley of the department of agriculture at Washington, D. C., had taken a great deal of interest in the investigation of the enemy which attacks not only chrysanthemums but the asters, golden rod, and other composites. The female stings the stem of the plants to deposit her eggs, causing a disorganization of the sap which is shown by numerous excrescences. As a preventive the best remedy I know is a solution of one ounce of bitter aloes in four gallons of water and to syringe the plants with it twice a week from July 1, to the middle of August.

If one desires to grow plants in the open ground to be shifted into pots for late blooming in the house, it is necessary such varieties should be those having compact habits, bright clean healthy foliage, those that do not suffer from the attack of either white mildew or black rust. This black rust is a peronospora closely allied to potato fungus. Ada Spaulding, H. E. Widener and Violet Rose, are kinds having many good and desirable qualities as mentioned before.

There are many of the finest old style incurved flowers, which have representatives in Queen of England, Mrs. Shipman and Princess of Wales, that do not do at all well here, whereas in England they are most popular and give great satisfaction. I have yet to see a really first-class dozen of these kinds in America. They have suitable conditions to make perfect flowers of these varieties that we have not here, and it must be the climate as we have as much skill and as good appliances as any country has.

The question was asked if there had been 24 Chinese incurved flowers shown in America that would rank in England as first-class? Mr. Thorpe did not believe there had been 24 flowers shown in one stand that would rank as second or scarcely third class. In regard to specimen plants of the old incurved kinds he said they were not equal in quality to the cut flowers. That famous variety, Mrs. Runtle and her two sports, always appear in competitive groups; in six varieties there are generally two out of three Runtles, and in nine or more varieties it is almost a certainty that all are shown.

A question was asked where the best twelve Japanese varieties originated: Japan, America, France or England? Mr. Thorpe replied that at this date

CYPRIPEDIUMS

*C. Curtisi.**C. Bellatulum.**C. Arthurianum* var. *pallidum.**C. Van Houtteanum.**C. Harrisianum* var. *superbum.**C. Elliottianum.**C. Microchilum.*

probably the best twelve were direct importations from Japan, but by next year or the year after at the most, twenty-four American raised seedlings will be in cultivation that will beat twenty-four from any other country, from the fact of there being so many engaged in raising seedlings and also from the fact that the standard of requirements has been raised. There are now a great many seedlings on probation; if they prove to be as good as when seen last season they will give us these additional good varieties.

What are the very best late kinds to have in flower at Christmas?

Mrs. Humphreys, Ethel, Mrs. H. J. Jones and Governor of Guernsey are ordinarily late flowering kinds. But it depends a great deal upon the manipulation. If the plants are allowed to become very dry in August and the wood ripens they will flower the middle of November, but if they are kept growing and the wood remains soft several weeks later, they will then flower in December. It is not a question so much as to when the

cuttings are taken as it is how continuously they are kept growing after they are rooted, up to say eight weeks before they are required to be in flower; perhaps it would be better to take cuttings later rather than very early of late flowering kinds.

In reply to a question as to the best six varieties for market cut flowers, Mr. Thorpe said he would not attempt that. He would prefer to name one hundred and did name fifty and more, and would leave the select choice to his ques-

VIEW IN ONE OF MR. WM. MATHEWS' ORCHID HOUSES CATTLEYS IN THE FOREGROUND.

tioner who would doubtless want them coming into the market from September 1, to January 1, consisting of all the popular colors such as yellow, white, pink, bronze and red and also a few fancy or parti-colored varieties; then as has been observed chrysanthemum flowers last about fifteen days. From the first of September to the first of January is four months or 120 days so it would take eight varieties of one color to cover the time; therefore it will be seen that at least thirty to forty kinds are required to fill the bill. Mr. Thorpe gave the following list of Japanese types as being of great merit, from Japan direct: W. H. Lincoln, Volunteer, Lillian B. Bird, Mrs. Alphens Hardy, Louis Boelmer, Kioto, Mr. H. Cannell, Christmas Eve, E. G. Hill, Comte de Germiny, G. F. Moseman and Robert Bottomley. Twelve American varieties: Violet Rose, Mrs. M. J. Thomas, Minnie Wanamaker, Harry E. Widener, Ada Spaulding, Carrie Denny, G. P. Rawson, Excellent, Mandus, Miss Mary Wheeler, Mrs. Bowen and Cyclone. Twelve varieties raised in France: Belle Paule, Ceres, Etiole de Lyon, Margot, Incomparable, M. Bernard, Roi Japonais, Mme C. Audigier, Boule d'or, Aleyon, Jeanne Deleaux and Valle d'Andarre. The best twelve English varieties: Elaine, Eynsford White, Sunflower, Martha Harding, Joseph Mahood, Fair Maid of

Guernsey, Carew Underwood, James Salter, Mrs. T. Jamieson, Stanstead Surprise, William Robinson and Mr. Mathews.

In reply to a question as to the possibility of producing a blue chrysanthemum, Mr. Thorpe replied that a blue chrysanthemum was exhibited at Philadelphia but unfortunately it was made of paper. However he fully believed we would live to see a genuine blue chrysanthemum. The old botanists declared that we could not have blue, yellow and red in the same species of plant, but we have blue, yellow and red hyacinths and he saw no good reason why we should not get the same colors in the chrysanthemum. How limited were the original colors of the chrysanthemum flower. "They were a pale yellow, white and a very weak lilac shade, and from these have been elaborated all the colors and shades we now enjoy in this flower. This has been accomplished by very slow and persistent work in selection and cross fertilization and in the finding of sports. Notice how intensified have become the yellows and how many shades there are. The lilac has become pink of pure shading; then as to red, Cullingfordii often times when the flowers are closely shaded presents us with nearly a pure tone of red. The most pronounced purple we have to-day is from the lightly tinted incurred Princess of Wales, being

a "sport" named Violet Tomlin; it is really purple. Now we cannot get purple without blue, and to those who are hard at work in the field of development, a blue chrysanthemum would not be such a great surprise. Raisers of seedlings frequently see signs of a new departure four or five years before it actually takes place. The blue chrysanthemum may first be obtained from a sport.

In reply to another question Mr. Thorpe said he did not believe the constitution of the chrysanthemum had been impaired by continual cross fertilization. On the other hand, the American raised seedlings of the past three years have decidedly more vigorous habits than those of years previous. Raisers of seedlings have now got to that point where they throw away all weakly seedlings, unless they have some new features which are desirable to develop in future generations. When his seedlings are about four months old, being generally then in 3-inch pots, he discards all plants of puny growth and constitutional weakness, thus doing away with all the bother of and often the temptation to keep a weakling when in flower.

Is the degeneracy of plants inherent in them or is it the result of the treatment they receive at the hands of the grower? Mr. Thorpe believed that all plants, just like ourselves, have a natural period of existence, providing always that they

ODONTOGLOSSUMS

are surrounded with a natural environment. The chrysanthemum is an herbaceous plant fulfilling the purpose of its being is one year's growth, and its constitution is generally not only equal to its needs, but somewhat in excess; this enables us to multiply plants by cuttings

which is simply an extension of the life of the parent plant and not a complete renewal of it as in propagation by seeds. Plants not raised in America, and propagated only by cuttings must have all the weakness of the original stock, with a short prospective existence. These re-

marks apply to plants that shall be used as garden plants, where no artificial protection is given than is afforded a geranium or other summer flowering plants. On the other hand in the raising of American seedlings for a given purpose, as for instance a thoroughly reliable race of

ARRANGEMENT OF FLOWERS IN BOXES

garden plants, if at any time during May five hundred seedlings are planted in the open ground, to which is given fairly good cultivation, there will come a time when some of these plants begin to weaken, that is they make no progress, and as the trying summer lengthens many others will drop behind until probably at the end of September, your five hundred seedlings have a representation of fifty healthy and vigorous plants only. It is these fifty then that have the constitution and the vigor you desire to propagate. I have often said that we ought to raise American plants for American gardens; a great many of the European novelties of all the plants are failures here. It is not that they are worthless but because the conditions they are subjected to is not to their liking.

Mr. Thorpe said his experience had afforded him such positive proof as to the growth of chrysanthemums that he believes when cuttings are taken at a fairly early time it makes no difference whether from a strong plant or a weak one provided always that they are properly treated afterwards. A cutting no thicker than a knitting needle if well cared for from the start should be as strong at two months later date as one that was originally as large as a pencil. Some believe that permitting a plant to produce only a few flowers tends to strengthen the plant; the fact is it costs the plant less effort to elaborate one flower, than it does fifty. If a plant is allowed to carry all its flowers without disbudbing what a task it has! A single shoot of some varieties has as many as forty buds formed and when we consider that each flower when open carries from 140 to 150 florets, the strain on the plant is a very severe one.

YOU CAN NOT afford to take any chances on your spring advertising. The only way to reach the whole trade is through the AMERICAN FLORIST.

Notes on the Arrangement of Flowers in Boxes.

One of the most important things in putting up a box of flowers, is to have the box. Several years ago I knew of old shoe boxes being used; one of the more enterprising firms that used them, had labels printed, and when the boys had nothing else to do, not even tooth picks to stem, they could paste these labels on the tops of the boxes, leaving the picture of the shoe on the ends; some other firms that used shoe boxes thought that labels were a useless extravagance, so did without them.

We find constant use for eleven different sizes of cut flower boxes, and shall add several more for Easter. Six of the boxes we have in two styles. These eleven sizes do not include pillow, cross, wreath or bouquet boxes.

Every morning as soon as the fresh flowers come in, we select the flowers that have been ordered by name; if these flowers are to be delivered in the morning, they are picked out and the one that is to pack them can determine what size box is best to use, always selecting one that will accommodate the longest stems with out bending; and it is quite as bad to put flowers in a box that is too large, as in one that is too small; in the former case many of the roses are apt to break off their stems or get badly bruised by moving in the box. If the flowers are not to be delivered until the afternoon, they are selected and put in vases and put on the top shelf "in the vault;" in this way we are sure that our customers will get the varieties they want and that they will be of good quality; these flowers are never used for any other purpose unless we are sure that we can duplicate them in time for the order.

Many of our customers prefer to leave the selection of the flowers entirely to us, simply naming a price; this practice we try to encourage for several reasons;

always, however, endeavoring to ascertain for what purpose the flowers are to be used; if for a person that is sick, we avoid using any that are very fragrant, but rather bright and well chosen colors. If they are going to a lady that we know to be a judge, we are careful to select specimen flowers, and if we have any thing very rare, give it a prominent place in the box; then other customers prefer quantity to quality, these also we try to accommodate.

In many cases we know that society women have strong likes and dislikes; this one is partial to violets and valley, this one to hybrids, this one "detests La France," that one has told us never to use smilax in anything that we send to her; "all the maiden hair fern that you want to, but no smilax;" these points we try to remember.

Another thing we consider in selecting "cut flowers," is that they may look well in the box; for instance, in picking out a choice lot, we first select the long stemmed ones, then the shorter, and finally the shortest, color always playing an important part; then as they lay on the shelf or in the pan, the one that packs them has a suggestion of how to do it, and can readily determine the size box to use.

If the flowers are particularly fine, he will use one of the special boxes (as illustrated). These boxes are made out of very rough card board, with a double bottom so that the moisture will not spoil them, lined with waxed paper, (as we do all of our boxes) tied with red tape and sealed with red wax, making a very stylish package.

The sealing has been appreciated by many customers, as it insures the safety of the note or card and gives the pleasure of opening the box, to the one for whom it was intended. Many also know that only our best flowers go into these boxes.

After the flowers have been arranged, if the colors are dark, we often sprinkle a few white violets, or light pansies over

1. *M. Spectrum*.2. *M. Shuttleworthii*.3. *M. Lindeni* var. *grandiflora*.4. *M. Macrura*.5. *M. Rozzli*.6. *M. Tovarensis*.7. *M. Estradae*.

the top, or if the effect is light, we use purple violets or pansies (not blue), and then draw a veil of maiden hair fern or asparagus.

It is often well when one color predominates to put in just a touch of its complimentary color; for instance, a handsome box of violets and valley, if you had a little piece of acaenia, to curve on the top, as a bit of color, it would be beautiful, and the curved line that you naturally could get would be pleasing; this combination would give pleasure to any person of refined taste; some would know why, others would think only of the effect.

H. H. BATTLES.

Watering and Ventilation.

[Read by George Corbett before the Cincinnati Florist's Society, January 19, 1897.]

Gentlemen of the Cincinnati Florist's Society. At your request I will give you my experience on watering and ventilation. It may be of some benefit to the beginner.

No operation in the greenhouse requires more care and good judgment than watering; and proper attention to this matter is frequently the key note to success. There is really no fixed rule that can be given that will properly apply to the various plants growing under quite different circumstances, so it is at once apparent that watering should be entrusted only to a man who is thoroughly experienced and possessed of excellent judgment. It must be borne in mind that injury is done not only by all-wrong plants to become too dry, but also by giving water when not required.

Speaking now of roses planted out on benches, in the winter months we endeavor to keep the soil a little on the dry side, as the soil is thereby kept sweet and the roots in a healthy condition, but as the sun grows strong and evaporation more rapid, great care must be taken to prevent wilting, which will greatly lessen the size and deepen the color of the flowers. The most successful florists in the country today are those who give close attention to watering. I venture the assertion that more roses are ruined by indiscriminate watering than from any other cause.

Solid beds should be watered with the fact thoroughly understood that they are vastly different from raised benches. In fact the difference in value of the two systems depends almost entirely on the care in watering.

I prefer the raised benches for the reason that the beds are less liable to become oversaturated by careless watering, and again the quicker drainage and evaporation of the benches allow us to give more frequent syringings than would be safe with solid beds. We all know the syringe is the best means of keeping down the red spider.

The nature of the soil in which the roses are growing will govern watering to some extent. The side benches with several rows of pipe underneath will require the most water and the most careful attention. The soil will dry at the bottom of the bench first because of severe firing and the syringing is very liable to deceive the grower by keeping the surface moist, while the roots at the bottom of the bench are suffering. We use a trowel and examine the border to the bottom. In the short days of winter we never walk into a rose house and commence to water until we first make an examination of the soil and see just where the benches require water. When the soil becomes solid and would readily pass through a coarse screen then we

consider it time to apply water and not again until the soil requires it.

It is best in using the hose to run the water slow enough to give time to water the dry places only and keep clear of places where water would be injurious. Avoid watering to such an extent that the substance of the soil is carried through the bottom of the bench, but give enough to show through.

We all admit that mildew is generally caused by a cold draught and bad ventilation, but over wet and over dry benches will produce the same result. I don't believe in using water in winter any colder than the temperature of the rose house. We use water from a tower elevated about 25 feet and kept warm by a small flow and return pipe, passing down and into a furnace. This answers the purpose splendidly.

Watering and syringing is done early in the day so that the foliage is well dried off before night sets in. Never be caught with foliage wet on a cold night. To create a moist atmosphere we use evaporating pans filled with tobacco water which keeps green fly in check and also red spider.

Probably the most dangerous kind of watering for the inexperienced to trifle with is manure watering. We never use any until the days lengthen and the soil becomes exhausted and the plants are in good working condition to use it.

VENTILATION.

We have a portion of our roses growing under glass where we used zinc joints in the glazing, at the laps also some houses without the joints. This I can assure you has a great deal to do with the ventilation in severe weather, when very little can be given. A house where the joints are used is almost air tight, so there is no continual circulation of air coming in through the laps of the glass like there is in a house where they are not used. In the tight houses we generally give a crack of ventilation in severe weather, just enough to change the atmosphere, but where the joints are not used, the laps of the glass give sufficient in severe weather.

In a tight house more care is required in the fall before firing commences. A small crack of ventilation should be left on all night for if there is the least amount of moisture around at night it will condense and a heavy dew settle over the foliage, which means a bad crop of fungus in the near future. This does not occur to such an extent if the house is not a tight one.

September and October care in ventilation is more especially required, just before firing commences in earnest. At this period mildew often makes its appearance. We fire very early in the fall, just enough to create a circulation of air and prevent the dew from settling over the plants.

I may claim that mildew never troubles our roses and I think very little would be seen anywhere if a few essential points in ventilation were considered. Be sure you ventilate on the right side, and not against the wind. Give very little at first and increase afterwards. Don't neglect to close up in time; better to reduce a little, rather than close up all at once.

I don't believe that a plant house should be perfectly air tight at any time, any more than a sleeping room should be. A very important point is to cool the pipes off quick in the morning after severe firing, when we are sure of a bright day. It is just as necessary to cool the water off quick as it is sometimes to warm it up quick.

Those who use steam certainly have the advantage in cooling down quick and are not compelled to ventilate so early on a cold morning. In all our glazing now we are using the zinc joints and like our neighbor florists here believe them to be a great saving to us in fuel and glass.

Answers to Questions.

The following questions are asked by a retail florist and answered by Mr. Wm. Falconer:

"Where can I buy the true *Elaeagnus longipes*?" Thomas Mechan & Son, Germantown, Philadelphia, and several others.

"The Trifoliate orange is presented as being very meritorious. What about its hardness and merits?" In sheltered places it is hardy about New York. Its flowers are white, fragrant and in bloom about or after the middle of May. The plant has strong spines and small somewhat sparse leaves. It has fruited nicely at Flushing, L. I., but we require to test it further before saying much about it.

"When should we sow seeds of *Pennisetum longistylum*?" For use for summer outdoor gardening sow at once—February or March—in the greenhouse, and grow on the plants in pots till planting out time in May.

"What is the cause of the poisoning from *Primula obconica*? Is there any preventive thereof?" The late Dr. George Thurber, who made a microscopic examination of the plant, was inclined to attribute it to the jointed hairs with which the leaves and other parts of the plant are so thickly beset, breaking off and entering the skin and causing the irritation. There is no preventive except don't touch the plants; at the same time some people can handle them with impunity.

"Is there any danger of loss in transplanting European beech trees or risk that they will not do well here?" The European beech does well here, witness the many fine specimens of purple and weeping beeches to be seen in so many gardens and which are varieties of the European species. And they can be transplanted with perfect safety providing they are very carefully handled, their roots well preserved and kept moist and their tops cut well back.

"What is the best variety of climbing hydrangea?" There is only one in general cultivation, namely *H. scandens*. It is illustrated in the *FLORIST*, page 567, Aug. 1, 1888. The other plant sometimes confounded with this is *Schizophragma hydrangeoides* which is very much like the climbing hydrangea, but barely as pretty when in bloom. Indeed many of the plants in the trade sold as *Schizophragma* are only *hydrangea*, for some years ago when these Japanese vines were introduced the name *Schizophragma* was the one applied to the *hydrangea*, and they have been mixed up together ever since. But both are perfectly hardy and well worth growing.

"Can iris seeds be planted in early spring?" Certainly. Tufted irises like the Siberian and Kiepmper's can be transplanted at any time; surface rhizomatous sorts like the German and crested can very well be planted in early spring, but it is better to plant bulbous irises as *Ir. reticulata* and English and Spanish irises in fall.

IF YOU LIKE THE AMERICAN FLORIST give it your fullest support by confining your orders to those who advertise in its columns and mention the paper when ordering.

1. *C. Chocoensis* var. Miss Nilsson.
4. *C. Schilleriana* var. Amuliana.

CATLEYAS
2. *C. aurea*.

3. *C. Mossiae* var. Warocqueana.
5. *C. Warneri*.

Something New.

The Florists' convention to be held at Toronto next August promises to be the most practical, interesting and useful that has yet taken place, and it becomes every florist in the country to add to this interest. The Executive Committee have provided an excellent program, and they together with the local committee have

made admirable arrangements for the holding of the convention, and now comes the Nomenclature Committee with, I hope, a glad surprise for you all.

The synonymy of the names of plants was so thoroughly gone into by the several sub-committees last year, that I find very little fresh material in this field, and hunting the rascals up is a harassing and disagreeable job, it is so hard to get

convincing proof against them, at the same time some ugly facts are accumulating. But we find the question of NEW PLANTS of very great interest indeed. The people want to know what plants are new and if these new plants, as they severally have got them, are true to name. Now as we as a committee are scattered over a thousand miles of country and cannot very well get together often to

examine these new plants and compare them with old varieties and pass an opinion upon their names, one of my colleagues suggested to me the advisability of asking our vice-president, Mr. John Chambers, the superintendent of Public Parks, Toronto, if he would grow and test any new plant or plants whose identity is in dispute, that the florists of the country would send to him for this purpose, and if he would so consent, then invite the florists to send such plants to him.

Acting on this suggestion I wrote to Mr. Chambers who kindly replied as follows: "I entirely agree with your views on the matter and will only be too glad to undertake what you have suggested. It would be interesting work for me and would undoubtedly prove to be of great value to our brother gardeners and florists. Anything you may have or know of anybody having, if you will send it to me it shall have the best of care. I will appoint one of my young men to take charge of the same, and will also give it my personal supervision."

Now brother florists this is an exceedingly valuable opportunity for you. If you have a new or uncommon variety of geranium, coleus, begonia, canna, dahlia, rose, carnation, fuchsia, or anything else send it to Mr. Chambers and he will plant it out or keep it indoors as will be best for the plant, and then when the convention meets there in August not only will have the Nomenclature Committee in full have an opportunity of examining and noting these plants, but the plants shall be right there, established and growing under the eye and criticism of every member who attends the meeting. They will not be special plants grown and primped up for the occasion, but matter of fact material. And if you have what you think is a misnamed plant send it there, and let Mr. Chambers grow it and the committee pass upon it.

One of the great advantages of these tests will be the fact that Mr. Chambers is an absolutely disinterested party; he is the Superintendent of Parks of the city of Toronto, and not in any way interested in the florist business commercially; and he has both ample greenhouse and outdoor accommodation for these tests right beside the hall in which the convention is to be held.

If you will cheerfully respond to this generous invitation extended to you by Mr. Chambers, you will add a new and intensely interesting feature to our conventions and have the biggest possible kind of an advertisement for yourself.

WM. FALCONER.

Chairman S. A. F. Committee on Nomenclature.

Lilium Wallichianum Superbum.

The introduction of this superb lily will again call attention to that group of Indian lilies, of which *Nepalense*, *Nelgerhense* and *Philippense* are representatives. It is well known to cultivators of lilies that the members of this Indian group have always been difficult to manage, the trouble being that they are very excitable, delicate in growth and make but few roots. From information I have just received it is evident that *Wallichianum* superbum has none of the weaknesses of its relatives. When a plant grows six feet high and carries eleven flowers and requires scarcely any support, it certainly is a vigorous and different plant to the ordinary run of Indian lilies.

It must be borne in mind that this group will not stand rough treatment;

they must have the protection of a greenhouse from September to May. If *Wallichianum* superbum ever gets cheap enough for florists to grow in quantity, what a magnificent Easter lily it will be. The coloring of its immense trumpet shaped flowers is most beautiful, a rich golden yellow and white inside, bronzy brown and white on the outside. The type of *Wallichianum* was introduced to England in 1850.

JOHN THORPE.

Butted Glass in Glazing.

Here is an engraving from the drawing sent us by Mr. H. Dale, showing the wooden cap used to hold the glass in place.

A description of his method of using appeared on page 524 of March 5th issue.

The Cut Worm.

Will you kindly tell me of some remedy for the cut worm (I think it is). It has got in among the smilax and at night eats off all the young shoots and leaves as fast as they appear. Some nights we pick off hundreds of the pests. It is like a caterpillar and burrows at the roots of the plants. Does this pest also attack roses or other plants? The sod I use is from an old pasture and is fine for roses. I think the eggs must have been in the soil, although the worms did not appear until a few weeks ago.

MAC.

In reply to your correspondent "Mac" the insect that is giving him so much trouble is what is commonly known as the cut worm (*Agrotis segetum*). It belongs to a family rather noted for its destructiveness to growing crops.

They are very difficult to exterminate; perhaps the best way is to destroy the moths as soon as they can be seen, which is generally early in the summer. In Mac's case I would advise him to lay a few old boards loosely together and as soon as the moths are hatched out they will hide between these during the day, where with a little care they can all be destroyed as fast as they collect. This will prevent their depositing their eggs for next season's crop. With his present crop he will continue to have considerable trouble and his main chance against them is careful hand picking every evening after dark. If he can procure fresh soil from chimneys where bituminous coal is used, a liberal sprinkling of it over the base of the plants will help to prevent their eating so much of it and at the same time make the soil around the

plants distasteful to the pest. If a few green leaves such as cabbage, turnip or lettuce are spread around they will generally collect in numbers under them and are thereby more readily caught.

We have tried many so-called remedies for this troublesome pest but have not yet found one that will wholly destroy them without at the same time destroying the plants, as they bury under the soil during the day. The moth of this insect is easily distinguished, being of a dark gray color, rather heavy and a poor flyer by sun light; hence if the boards above referred to are turned over during the day the moths can be readily caught and destroyed.

This pest does not usually do much damage to roses as they prefer to locate their eggs where there is some shelter nearly or quite on the surface of the soil, and as roses do not as a rule offer such protection the moths (fortunately) avoid them and go for such crops as smilax; but if a batch of their eggs should happen to get into the soil during the summer they would make short work of the young roses in fall and early winter.

J. N. MAY.

Coming Exhibitions.

March 25-26, Montreal.—Spring exhibition Montreal Gardeners' and Florists' Club.

March 31-April 3, Boston.—Spring exhibition Mass. Hort. Society.

April 7-11, New York.—Spring exhibition New York Florists' Club.

April 14, Los Angeles, Cal.—Rose show Southern California Floral Society.

April 16-17, Syracuse, N. Y.—Spring exhibition Central New York Hort. Society.

April 22-23, Baltimore.—Spring show Gardeners' Club of Baltimore.

May 6-8, San Francisco.—Annual flower show California State Floral Society.

June 6, Boston.—Rhododendron show Mass. Hort. Society.

June 23-24, Boston.—Rose and strawberry exhibition Mass. Hort. Society.

September 1-4, Boston.—Annual exhibition of plants and flowers Mass. Hort. Society.

September 15-17, Boston.—Annual exhibition of fruits and vegetables, Mass. Hort. Society.

November 3-6, Boston.—Chrysanthemum show Mass. Hort. Society.

November 10-13, Philadelphia.—Chrysanthemum show Penna. Hort. Society.

November 10-13, Chicago.—Fall exhibition Horticultural Society of Chicago.

November 10-14, Indianapolis.—Chrysanthemum show Society of Indiana Florists.

Shipping Cut Flowers.

Will some experienced wholesale commission dealer in cut flowers give us the best method of handling cut flowers, giving full and complete directions for packing and shipping so that they will arrive in the best possible condition. Let us hear all about it through the columns of the FLORIST.

S.

[The subject has been touched upon several times in these columns but there is a great deal more that may be said and we hope the request of our correspondent will be complied with. It would be well to start with directions for cutting the flowers, for after care is largely thrown away unless the flowers are cut at the proper stage of development.—Ed.]

ONCIDIUMS

1. *O. Jonesianum*. 2. *O. Phalaenopsis*. 3. *O. Orthotis*. 4. *O. Iridifolium*. 5. *O. Cucullatum*.
6. *O. Papilio* var. *majus*. 7. *O. Lanceanum* var. *superbum*. 8. *O. Macranthum*.

A Good White Daisy.

A new white daisy of extra large size (from $1\frac{1}{4}$ to $1\frac{1}{2}$ inches across) sells exceedingly well with us in bunches for street wear or for boutonieres. We are selling the entire cut from Mr. F. Schneider in Attica, since fall, and cannot always supply the demand. The long stout stems and extra large size of the flowers is a peculiarity of this variety. We got it under the name of "Snow-flake", and probably it is not identical with "Snowball" of the Longfellow type, the flowers being uniformly of an extra size under the most ordinary treatment and never showing a yellow center. Its last-

ing qualities cannot be excelled by any other flower, for we have kept some fresh for over three weeks. Even after being exposed to dry heat without water and wilted down completely, if sprinkled and the stems placed in water, after an hour's time they will look as fresh and plump as ever and last for weeks in that condition. Whether daisy flowers will become universal favorites for wearing remains to be seen, but even if not, this variety should be grown more for forcing, as the flowers will be very useful to retail florists for making up funeral pieces, etc. The size of the flower and the purity of the color will at once recommend it to everybody.

J. B. KELLER.

Harrisii and Callas.

Will you kindly give me information as to the following matter:

I have *Lilium Harrisii* that will bloom for Easter. Will they flower again this winter? If so, how should they be treated to produce second crop? Will the bulbs be exhausted to the extent that it will not pay to keep over to force next season.

When callas are through blooming, which is the better way: To leave them in pots and keep dry, or remove bulbs, shake off dirt, and keep bulbs absolutely dry?

In starting up in the fall, after repot-

ting, is it advisable to place on bench at once to grow or treat as other bulbs, and keep dormant, until root growth is well established? ENQUIRER.

LILUM HARRIS.—Being of a somewhat evergreen nature, if you keep them moist and well fed after they have done blooming they may make some fresh growths which will bloom in summer or fall, but it isn't certain or desirable. Better keep them growing for a while then dry them off and completely rest them. They can be forced year after year, but it isn't well to depend on these bulbs for early flowers or paying crops.

CALLAS.—Better dry them off in their pots. As soon as they are repotted, stand the pots on the ground outside till they begin to root freely; or stand them on benches in the greenhouse but don't force them. Let them root well and start slowly at first. W. F.

Crotons.

After a period of comparative neglect there now appears a certain degree of interest in the notably handsome group of foliage plants commonly known under the above title.

This title however is not now admitted to be correct by the leading authorities on nomenclature, the genus being referred to *Codiaeum*, and in the course of a few years the latter name will probably displace the now familiar croton.

But it is not proposed in these brief notes to discuss the nomenclature of these plants, but rather to mention some of the uses to which they may be put, this being of more interest to the average florist than the above, though the correct naming of plants is also an important topic.

During the past two or three years the availability of crotons as bedding plants has been more or less discussed, and their highly ornamental character under such conditions has been proved, among the notable examples of this kind of bedding having been some large circular beds in Fairmount Park, Philadelphia.

These beds, situated near the southeast end of Horticultural Hall have been filled during the past three seasons with a mass of many colored crotons, the bright coloring and luxuriant growth of which coupled with the novelty of the display has attracted much attention from plant-lovers.

The soil does not undergo any special preparation in this instance, any more than is given to the other flower-beds, nor is this necessary, the most essential condition being a warm summer, while an additional advantage will be found in having a well-drained bed, for when placed in a low or boggy location success may not be so complete.

The crotons are planted out in this latitude about the last week in May or first week of June, the time of course depending on the condition of the weather, and in the autumn are lifted before frost touches them.

They root very freely when planted under congenial circumstances, and consequently may be readily lifted without suffering greatly from the removal, the best plan being to cut them back quite hard at this time, and the pot them in as small pots as the roots will admit, after which they should be placed in a warm house and syringed regularly in order to induce them to break again.

It may be added that strong plants as well as strong-growing sorts should only be used for bedding, good plants from

4, 5 or 6-inch pots being preferable, while still larger ones may be used to considerable advantage in large beds, and in order that the plants shall be in good condition to stand the change they should be hardened off in a well-ventilated house some time beforehand, for if they were brought out of a close, warm house and planted in full exposure they would probably lose much of their foliage.

Regarding the propagation of these plants it may be said that cuttings may be put in at any season with reasonable success, providing they be placed on brisk bottom heat, but early in the spring is the best period for this operation, as the young plants will grow on more rapidly at that time than at any other.

Another instance in which crotons were bedded out with very happy effect was noted during the past summer in this vicinity, though in this case these plants did not comprise the entire contents of the bed, the arrangement of which was as follows, the shape being an oval:

In the centre were a few clumps of dwarf French cannas, these being surrounded with an irregular row of *Eulalia Japonica* var. *Ficus elastica* and some *Pandanus Veitchii*, these in turn being encircled by a mass of crotons carelessly arranged, and to complete the whole a border of *Acalypha musaica* was added.

The various forms and colors thus represented made a very pleasing combination and provoked much favorable comment.

But this is not the only use to which crotons are adapted, for beside being extremely effective as exhibition plants they are also valuable for vases, window boxes, and in well-colored small plants they may be used to advantage for mantel decoration and also for dinner-tables, and to keep the colors bright it should be remembered that plenty of light is necessary.

As to varieties there is an embarrassment of good material now catalogued but the following are among the most satisfactory and are chiefly sorts that are readily procured.

C. Challenger.—This very good variety belongs to the long-leaved section, the leaves being from 12 to 18 inches long when fully developed, and about 2 inches wide. They are much variegated with creamy white, this coloring becoming suffused with red as the leaves attain maturity. This variety is a strong grower and worthy of high recommendation.

C. Evansianus.—Another remarkably good sort and has bright green, slightly trilobed leaves, these being variegated with golden yellow when young, but afterward changing to various shades of crimson and orange-scarlet.

C. Hanburyanus is also a useful sort and has quite large leaves that are ornamented with golden yellow and crimson. This is also a very strong grower.

C. Disraeli is another good one, and has trilobed leaves about a foot in length, these having golden ribs and veins.

Somewhat similar to the last is **C. Earl of Derby**, the leaves of the latter being of similar form and the variegation also somewhat similar, though containing enough red coloring to render it distinct from the preceding.

C. Interruptum.—This is quite an old sort but still a good one. Its leaves are long and narrow, sometimes twisted, and sometimes consisting only of the midrib for a space of an inch or two in the central portion of the leaf, this fact easily explaining its specific name. The

color of the leaves of this variety is mostly purplish green with a crimson midrib, and as it is of quite bushy habit can readily be grown into a good specimen.

C. majesticum is also a good variety of the narrow leaved type, the foliage being from 15 to 18 inches long and quite narrow, and when young is more or less marked with bright yellow, this afterward turning to crimson.

C. multicolor is another good bedder, and has irregularly shaped leaves that when mature are edged, marked and blotched with yellow, red and crimson. It is also a strong grower, and the odd shapes assumed by its leaves make it quite an effective plant.

C. Queen Victoria is also worthy of a trial, and has oblong-lanceolate leaves about a foot in length and richly colored with yellow and crimson.

C. Veitchii is another well-known and reliable sort, and produces leaves of similar shape to those of the preceding, the variegation of which is composed chiefly of pinkish margins and veins, this being frequently reinforced with spots and blotches of yellow.

The few sorts to which reference has been briefly made are all good and distinct ones, but this list may be readily extended by the addition of such as *C. pictum*, *C. Hillianum*, *C. Auenbuehlium*, *C. Andreanum*, *C. cornutum*, *C. variegatum*, and *C. illustris*, all of which are fine varieties and worthy of all the attention they may receive. W. H. TAPLIN.

Passion Flowers.

These are natives of the West Indies and other parts of tropical and extra-tropical America, and a few species, the May-Pop (*Passiflora incarnata*) for instance, are indigenous in our southern states; a few kinds also are found in Asia.

Botanists recognize about 120 species, but only a few of these are in cultivation. But horticulturists never rest at species, they push on to obtain varieties, and here they have succeeded in getting a white flowered *P. corulea* they call *Constance Elliott*, several variegated leaved varieties, and so on.

Both to florists and amateurs the passion flowers are a very important race of flowers. As a rule they are easily propagated and easily gotten up into nice salable stock fit for mailing or express, and as they grow quite readily and generally bloom freely, the amateur is usually well satisfied with his purchase. They are mostly propagated from cuttings, and some of the sorts that are hard to strike are grafted on *corulea*, and all the species can be raised from seed, but it cannot often be had.

None of the fine species is hardy with us. Last ('89-'90) winter I had roots of *corulea* and its varieties and of incarnata live over out of doors and send up strong shoots in summer, but it was an exceptionally mild winter; in ordinary winters they get killed out. In a warm place and with a heavy mulching they might live along winter after winter.

Planted out side in summer in sheltered but warm sunny places and in good ground they grow into dense far-reaching vines and often blossom abundantly, and in a sunny place they have them perfectly clean and enjoy them.

In the greenhouse they are generally planted out in a box or border and run along under the roof or like any other running vine. They are capital for this work, only very subject to mealy bugs. Both *P. racemosa*, which has drooping

CROTON VARIEGATUM.

clusters of red flowers, and *P. Raddiana* (Kermesina) also a red-flowering species are often grown as permanent conservatory climbing vines. One of the most brilliant red flowering ones of all is *P. vitifolia* from Panama.

Passiflora Watsoniana is a new species from Brazil, and first bloomed in cultivation at Kew five years ago. The leaves are three-lobed, and the flowers are violet-purple and white and the blossoms hang up at the end of the flower-stalk like the bowl of a Dutchman's pipe. It is free blooming and the flowers are sweetly scented. But it is a hard one to propagate in quantity.

About six years ago we had another species, namely, *P. Violaeca* from Brazil, and which is very similar to *Watsoniana* in habit, foliage and flowers. I got it about five years ago from John Thorpe and have been keeping quiet about it, hoping he or some one else of my friends (hardly so-called) Constance Elliott, Arceneuil, and variegated-leaved; *P. Piordtii*, continuous blooming, showy and excellent, but I am ill at ease about the name *Piordtii*; *P. edulis* whose large, deep green, glossy leaves are more attractive than its flowers; *P. Londoni*, with handsome purple flowers and *P. Munroi*, a hybrid with showy purplish violet blossoms.

It may interest some of your readers to know why the name *Passion Flower* was given to these vines. I quote from the *Treasury of Botany*:—"The name was applied from the resemblance afforded by the parts of the plant to the instruments of our Lord's Passion and its attendant circumstances; thus the three nails—two for the hands, one for the feet—are represented by the stigmata; the five anthers indicate the five wounds; the rays of glory or some say the crown of thorns are represented by the rays of the 'corona'; the ten parts of the perianth represent the Apostles, two of them absent—Peter who denied and Judas who betrayed our Lord; and the wicked hands of his persecutors are seen in the digitate leaves of the plant, and the scourges in the tendrils."

WM. FALCONER.

Anthuriums.

In this large group of warm house aroids many very attractive plants are to be found, though to the florist the showy-flowered species and varieties form the most interesting portion, while the many beautiful foliage plants also found in this genus are probably of more value to private collections from the fact that but few of them are capable of withstanding much exposure, and consequently are of little value for decorating.

Among the anthuriums that are notable for their flowers, (or rather for their spathes) the majority have been produced from two species, *A. Scherzerianum* and *A. Andreanum*, either by means of seedling variations or by hybridization between the various progeny of these species. Crosses between other species than these have also been made at various times, but the results appear to have been less striking.

As to the particular place to which anthurium flowers should be assigned in

order to display their beauties to the best advantage it may be stated that they have been used with charming effect in certain fine arrangements of orchid flowers, the singular form of the anthuriums being specially adapted for just such a purpose as this, and the bright scarlet found in several of the varieties supplies a deficiency in color also, this being a shade that is scarce among orchids.

The anthurium flowers also possess the additional advantage of great lasting qualities, in fact some have been known to keep in good condition on the plants for fully three months and even when cut they are remarkable keepers.

As stated above the anthuriums in general prefer warm house treatment, their growth being much more luxuriant under such conditions, but when in full flower they may advantageously be kept in a somewhat lower temperature, for instance about 55°, but if this be done the plants should receive less water at such time else the roots may suffer.

When in active growth they require an abundance of water, both at the root and overhead, and moderate shading at all times. As regards soil, these plants need a light open compost, a satisfactory mixture being composed of equal parts of rough, fibrous peat and chopped sphagnum, to which should be added some good coarse sand, and some charcoal or finely broken crocks may also be included in the mixture if convenient.

In potting some attention should be paid to drainage in order to keep these plants in good condition, as stagnant moisture will prove injurious to their roots, and to avoid this the pots should be half-filled with crocks, then keep the plant well up above the rim of the pot and press the compost only moderately firm. Some growers conclude the operation by covering the surface of the soil with a coating of live sphagnum, this giving a very nice appearance and being enjoyed by the plants, but is not absolutely necessary to their well-being.

The propagation of anthuriums is usually effected by means of seeds, though division is the surest method of perpetuating any specially fine form, from the fact that seedlings vary greatly, and while one may be reasonably sure of getting some good ones among a batch of seedlings providing the seed be secured from a good variety, yet it is quite probable that there will also be a number of inferior forms in the same lot.

If division is resorted to, it is best accomplished quite early in the season, say in February or March, this being also a good time for the potting operation.

In the matter of varieties there is now much room for choice, as in the past few years considerable attention has been paid to the hybridization and selection of anthuriums, especially in Europe, and doubtless similar results will be shown on our side of the water in the near future.

The following briefly described forms are all valuable, some being especially large and fine.

A. Scherzerianum, the typical form of which has oblong-lanceolate leaves that are from twelve to eighteen inches in length and two to three inches wide—the flower stems being bright red and crowned with scarlet spathes, these being about three inches long by two inches wide. The spadix or flower-spike is composed of a large number of insignificant flowers closely massed together, and in color orange or yellow.

A. Scherzerianum Wardii is a much stronger grower than the type, and produces larger foliage and spathes, the latter being very broad and of great substance. *A. Scherzerianum Cyphri* is another fine form, and of strong growth, the spathes being of a crimson shade.

A. S. Rothschildianum is the result of a cross between the typical variety and its white form (*A. Williamsii*) and seems to combine the characteristics of both parents, the spathes being creamy white and dotted or splashed with crimson.

A. S. maximum is also a fine form of this favorite variety, and produces very large spathes of brilliant scarlet, these being narrower than those of *A. Wardii* and also longer, sometimes attaining a length of eight to nine inches.

A. Andreanum has become quite well known in the fifteen years since it was introduced, and may be briefly noted as having very large ovate-lanceolate leaves of bright green and orange-red spathes, the latter having a curiously corrugated appearance from the prominence of the veins. The spathes range from six to nine inches in length and about four inches in width, and are thrown up on long foot-stalks.

Several forms of *A. Andreanum* have been named and sent out, among them being *A. flore-alba*, which is as its name indicates, a white flowered variety, *A. grandiflorum*, and *A. Ferriense*, the latter having pink spathes.

In addition to these, numerous hybrids of which *A. Andreanum* is one of the parents exist, and of these *A. chelseiense*, *A. Froeblii* and *A. Archduc Joseph* are examples.

W. H. TAPLIN.

Boston.

The cut flower market still continues in a state of inactivity, although the demand is somewhat better on certain kinds of stock. Roses are very abundant and cheap. From present indications there will be a full supply of most varieties for Easter. Violets are abundant and were never better. The early date of the day this year will be favorable to the shipping trade which has grown to enormous proportions within the past few years.

C. L. Allen of Floral Park, N. Y., delivered an instructive lecture before the Massachusetts Horticultural Society on Saturday March 14, his subject being "The scientific education of gardeners." After defining education and speaking of the necessity of a proper training of the natural abilities, Mr. Allen spoke at length on the conflict supposed to exist between science and practice claiming that there is no good cause for the existence of such a notion. He made a strong plea for intimate and harmonious relations between the gardener and his employer, and condemned in severe terms the practice of some gardeners in expecting and even demanding commissions or all purchases made for their employers. As to where and how practical education can be best obtained the essayist said that taking it for granted that the student has a fair rudimentary education to start with, the garden is the school to attend, where every plant, animal and insect is a teacher. Above all a young man should love his profession, else he had better stay out of it. Systematic botany, while absolutely necessary to the gardener's education, will yet be a most desirable adjunct to it, and it will add greatly to his proficiency. Scientific knowledge will be a great help in practical work. From the very nature of his business the gardener

ANTHURIUMS

1. *A. Scherzerianum*. 2 and 7. *A. S.* var. *Warocqueanum*. 3. *A. S.* var. *Rothschildianum*.
 4. *A. S.* var. *Mlle. Lucienne Linden*. 5. *A. S.* var. *Bispathaceum*. 6. *A. Andreanum* var. *Mme. Closou*.

has to come in contact with more obstacles to be overcome than most classes of men. He must in a great measure be governed by the elements, which are

capricious; he must perfectly understand all the conditions of soil and climate and impossibilities are not infrequently required at his hands. We are indebted to

the gardener for all the scientific knowledge we possess in relation to plant culture and development, and it matters not whether the student is to teach the art

or practice it, the garden is the school and nature is the head teacher. There is a great difference between knowing a thing and knowing about it. The specialist emphasized the necessity of continual progress, the best gardener being not the one who merely keeps his business up to the times, but the one who keeps it ahead of the times, and pointed to the history of the business in this country during the past fifty years, in which time the practice of gardening had made such rapid strides and flowers had gradually come to be instead of a luxury a real necessity.

System, which carries with it order and neatness, is a good working capital for any gardener. A neat garden is almost invariably a good garden, and the manager of such a one is sure to be successful. All that makes a plant valuable is its beauty, and beauty is never associated with filth. Therefore every gardener, amateur or professional, private or commercial, should encourage and stimulate a love for the beautiful; it is an antidote for all the asperities of life; it softens the hours of labor and sweetens the necessities of our natures. A study of the beautiful, whether in the plant, the tree, or the flower; whether in the conservatory or the vegetable garden, in the field or wood, in fact wherever found, will have a tendency to elevate and refine character and materially assist in promoting happiness. The gardener, more than any other man, is a child of nature, whose gifts, united with his industry, his experience and observation, will make old age beautiful and pleasant. The care of the beautiful never wearies or grows old; on the contrary, it increases with our years. When the active duties of life are over, the gardener has a rich fund of enjoyment and constant companionship in the plants he loves. W. J. S.

New York.

Business continues to be very quiet. All kinds of spring flowers are plentiful, and the prospects are that there will be a good supply of everything to select from at Easter. Everybody looks forward to a good Easter and with favorable weather and good flowers, there is no reason why it should not be so. This season so far has been a very poor one.

There are many very beautiful novelties and ingenious contrivances out and though lilies may have first claim, the competition will be very warm. In baskets celluloid is all the go. They are made in all possible shapes and look very pretty when filled with flowers; round baskets of Dutch hyacinths in separate colors and others filled with growing lily of the valley will be very popular this Easter. Baskets of polyantha roses in pots will claim attention; azaleas in white pot baskets, genistas in yellow baskets, lilies in white and blue baskets all tied with handsome ribbons are expected to meet with favor. Of course baskets of cut roses have their patrons and in this case wherever possible a growing plant will fill the center. No similar should be seen on a basket of roses, but plenty of their own foliage and the flowers arranged in a natural manner have a great effect; baskets of growing carnations filled with flowers of the same variety are pretty. Orchids brought to the front by the recent exhibitions will be popular.

Dean, Keller, Pierson and Roehrs each have a splendid stock of flowering plants pushing on for Easter, and report good prospects. Lilium Harrisii has all her own way this time. Ixia is a beautiful

little thing, but too transparent; the present call is for masses of brilliancy. Freeman of Long Island says he has shipped creas all over the states and they are becoming very popular everywhere, especially the A. Wilmoreana. He has a fine lot of A. persoluta alba and A. persoluta rosea ready for the market.

Stump decorated at Mme de Barrios' on the occasion of her reception and dinner party recently. The table, oval in shape and eighteen feet long, was adorned with an immense center piece of pink tulips, which was thirteen feet long and oval; there was a twelve inch band of white tulips round the pink ones giving a pretty effect. Large boutonnieres of Grace Wilder carnations were used. He also had a large decoration for the Freundschaft Verein on the occasion of their masquerade ball on Saturday night. The handsome club house at 72d street and Park Avenue was turned into a garden scene. The ladies' reception room was transformed into a rose bower. The whole of the ceiling and walls was covered with southern smilax among which hung clusters of electric lights in light greenish globes. At the sides were banks of roses in pots arranged in banks of green moss here and there forming semi-arches. The main stairway for several flights up was like a scene in the tropics, the ceiling all the way being hid with a variety of vines, with graceful palms, genistas and azaleas at the sides; small electric lights glittered among their flowers, giving a pretty effect to the whole. The second floor represented a forest scene, the whole being studded with tall firs and other evergreens. The sides were scenes especially painted and at one end of the room there was arranged a scene from a Dutch village. Small houses were built, through the doors of which the songs and beverages of the Fatherland flowed forth. The third floor was effectively decorated and used for the dancing.

H. H. Francis has a new Giant Mignonne, it is a wonderful flower and Mr. Francis intends introducing it at the coming show. Mr. Chas. Bird is blooming a variety of flowering shrubs and novelties for this occasion. Mr. Bird's Forsythia is very beautiful and extensively used at present.

It is intended to have blooms of every carnation grown in the states at this show; a committee has been appointed to superintend the staging and classifying of this flower. Special premiums in addition to those already mentioned will be given to meritorious exhibits, the raiser's name to be attached to all carnations. We invite our brother florists to all over to contribute to this feature. It is also intended to do the same in regard to roses and Messrs. May and Asmus have made arrangements for receiving and properly staging any exhibit in the rose collection. It is the desire of the club to see what is grown and know what is worth growing. This is not merely a New York show, it is a national show. Entries have come from great distances and men prominent in horticulture from many states have promised to attend. Judging from the entries and the general interest taken here, it will certainly be an "eye opener." Get your novelties and fine flowers ready boys; we'll give you ample space and assist you in the proper displaying of your goods. Let us have Boston, Philadelphia, Chicago and other great cities' ideas in floral arrangements here. A complete list of prizes will be issued during the week.

At the meeting of the New York Florist

Club on Monday night there was much discussion on the public flower market question and from the majority of opinions expressed it was decided that such an institution would at present be fatal to the retailers. A silver cup was presented to the retiring secretary, Mr. Allen, for his valuable services rendered the club and floriculture in general for many years past. Suitable presentation speeches were made by Messrs. May, Taylor and Anderson to which Mr. Allen replied with feeling, assuring those present that it would always be his ambition to be among them in going up the hill as well as crossing the plain; he would cherish the cup and in days to come he hoped to drink from it to the many pleasant memories and achievements of the club. The club intends taking organized action in furthering the project of a botanical garden and horticultural school.

JOHN YOUNG.

Toronto.

The Toronto Gardeners' and Florists' Club held their regular monthly meeting on the 14th inst. The meeting was a very interesting one, though perhaps hardly as lively as the meetings of this very lively club generally are; many members probably had not quite recovered from the effects of the "late recent" elections.

Mr. G. Vair read a paper on "Growing lily of the valley for commercial purposes," which elicited a long discussion. It seemed to be the general opinion that there would be no trouble in producing as good commercial crops in this country as can be imported, if the right treatment be given to them, but the knowing ones (who always want to enquire what money can be got out of anything) seemed to think that they could not be grown for as low a price. However the club thought the subject had not been quite thrashed out yet and it will come up again next meeting. Mr. R. Marshall, florist, having promised to read another paper under the same heading.

Various committees were appointed to look after matters connected with the coming convention and the chairman thereof were instructed to call meetings at an early date and get matters into working order. Perhaps it might be of use to some members of the S. A. F. to know the names and addresses of these chairmen; here they are:

Reception: J. Chambers, Supt. Parks and Gardens, Toronto; finance: J. H. Dunlop, McKenzie Ave., Toronto; printing and badge: S. E. Briggs, The Steele Bros. Co., Cornhill Front Street, Toronto; streets, Toronto; trade exhibit: T. Munton, Eglinton, Ontario; registration: H. Simmers, 147 King St. E. Toronto; entertainment: W. J. Laing, 401 Huron St., Toronto; decoration: C. Arnold, 521 Queen St. W. Toronto; introduction: F. G. Foster, florist, Hamilton, Ontario; ladies: Mrs. Frazer, Spadina Crescent, Toronto; bureau of information: G. Vair, Chestnut Park, Yonge St., Toronto.

Mr. J. E. Killen from J. C. Vaughan's establishment, Chicago, dropped in to the meeting and was heartily welcomed. The club is always glad to see its American cousins; if it were not for those confounded tariff walls no doubt it would have the pleasure of welcoming more of them.

Mr. J. H. Dunlop read an extract from a private letter he had received from Mr. J. N. May fully endorsing the letter from Mr. Mendenhall, of Minneapolis, which

PASSIFLORA WATSONIANA.

[SEE PAGE 566.]

THE NEW ROSE

WABAN

This very valuable rose originated at the Waban Conservatories of E. M. Wood & Co., Natick, Mass. It is a *SPORT* from Catherine Mermet and identical with that variety in every characteristic, excepting color, which is a rich, deep, **BRIGHT PINK**; it sustains the same relation to its parent as Duchess of Albany does to LaFrance. The only objection to C. Mermet is its frequently pale, insipid color in cloudy weather; experience has shown that the **WABAN** retains its deep rich color in all kinds of weather; it will, without doubt, prove to be as valuable as *THE BRIDE* which is also a sport from the same magnificent variety.

IT HAS ALREADY RECEIVED THE SILVER MEDAL

of the Massachusetts Horticultural Society; of the Pennsylvania Horticultural Society, and **Certificate of Merit** from each of the Societies in this country and Canada where it has been shown,

ALL OF THE STOCK READY FOR DISTRIBUTION APRIL 15th IS SOLD.

On and after this date (March 12th) orders received for a limited number of good, healthy plants, ready for delivery May 15th, 1891. **ORDER EARLY.**

ORDERS BOOKED NOW, WILL BE FILLED IN STRICT ROTATION.

From 2½-inch pots.

The following Agents have been appointed to sell the Rose in the respective territories given below:

W. J. STEWART, 67 Bromfield St., Boston, Mass., for the New England States (except Connecticut) and Quebec.

JOHN N. MAY, Summit, N. J., for Connecticut, New Jersey, New York, Michigan, Indiana and Ontario.

ROBT. CRAIG, 49th & Market Sts., Philadelphia, Pa., for Pennsylvania, Ohio and all Southern States, east of the Mississippi River, and District of Columbia.

J. C. VAUGHAN, P. O. Box 688, Chicago, for Illinois, Wisconsin, Minnesota, and all States and Territories west of Mississippi River and Canadian Territory west of Ontario.

Orange, N. J.

Mr. Alfred Hibblom of Dodd St., East Orange will put one of his rose houses into simlax next season and will build a new carnation house 120x18.

Mr. E. Porsch of Hamilton, East Orange, will build a new carnation house 100x16. His carnations look very fine.

Mr. T. H. Spaulding has added a new house 130x20 which he will use exclusively for tuberous begonias. He has many thousands of young plants. He had a bed of these begonias last season that was a sight long to be remembered. The bed was 100x3 and the plants bloomed magnificently and the flowers were superb. As a result nearly every private place about Orange will have a bed of tuberous begonias the coming season.

John McGowan has thirty-five seedling carnations that promise well. Among them are yellows, pinks, whites, scarlets and dark maroons in addition to particular colored ones. M.

THE BUFFALO Florists' Club has issued an advance list of premium classes for its chrysanthemum show and floral exhibition to be held next fall. Copies may be had on application to D. B. Long, secretary, 457 Main St., Buffalo, N. Y.

LAST WEEK we told you it would require nearly a ton and a half of paper for this week's issue. Well, we had to raise the figures. It took nearly two tons of paper (3,870 lbs) to print this issue.

CONFINE your orders to those who advertise in the AMERICAN FLORIST if you desire to give this paper your fullest support, and please name the paper when ordering.

PALMS.

We have a splendid stock of Kentias in 2½, 3 and 4-inch pots, which we offer at exceptionally low prices. Plants are of our own growing and are strong and stocky. 25 plants sold at 100 rates.

At Seed Trade.

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president; JOHN FORTLER, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1891.

Agricultural Seeds.

C. R. Orcutt of San Diego, complains that his local collector assesses him 20 per cent duty on Guadalupe Island Palm Seeds (*Erythra Edulis*) as agricultural seeds. He states the free list distinctly includes "fruits, green or dry, dates, palm nuts and palm-nut kernels," yet the collector refused to admit this claim. In conversation held with him, he said all fruit or ornamental tree seeds were considered agricultural seeds by custom officers. Mr. Orcutt says he would be glad to hear the proper definition of agricultural seeds.

[This is the old story which we have had occasion to relate before in these columns, namely that the present tariff law with its many revisions and changes, is subject to the individual interpretation of each custom officer in America in applying the law. The old axiom "Many men of many minds" is here exemplified. Undoubtedly duplicate invoices of a mixed lot of seeds, plants and bulbs, could today be entered at ten different ports in the U. S. and at each port pay a different duty. We have suggested to custom officers that these disputed points should be made report of and that each importer should give his views in writing and let a meeting be held of the different collectors, or assistant collectors or an officer from each port, and these questions considered and a uniform rate made in each case. It is well known that many importers do not the past season pay any duty on clematis, while others have been charged duty on both roses and clematis. This duty on valuable stock like clematis and roses, amounts to as much as the entire profit, therefore some houses are getting two profits on their stock this year.]

THE MICHIGAN SEED CO., succeed the Michigan Lake Shore Seed Co., at South Haven, Mich., except to liabilities.

THE Michigan Agricultural College propose to send samples of six of the most noxious weeds with their bulletins to farmers, attaching the seeds to a page of their bulletin with glue. They anticipate that this will prove a wonderful aid to the farmer in detecting the same among his seeds.

APPLE SEEDLINGS.

We now have on the road a large supply of FIRST CLASS APPLE STOCKS suitable for grafting or budding, which will arrive about the latter part of this month.

Price \$1.00 per 1000, boxed and freight paid when not less than 5000 are taken.

FRENCH CRAB SEED.

We expect our last importation to arrive the last of this month. It has been kept moist and will be in excellent condition for Spring planting. No frost necessary to germinate. Price \$12.00 per bushel.

AKRON, O.—At a meeting of the Botanical Section of the Akron Scientific Club Feb. 18, Dr. J. B. Hill read a very interesting paper on "How plants climb."

AUGUSTA, ME.—Thomas McClunie, the florist of Hartford, Conn., has been giving the contract for laying out and beautifying the grounds around the State Asylum for the Insane, located here.

SAGINAW, MICH.—C. C. Elwell, who has been connected with the Allen Nursery Co., since its organization, has severed his connection with the firm and will start in the nursery business for himself.

NORWICH, CONN.—Alfred Hunt has leased the florist business on La Fayette street from Mrs. R. H. Goldsworthy for a term of years, and his name should be substituted for that of R. H. Goldsworthy in the directory.

BAY CITY, MICH.—The Bay County Horticultural Society is laying plans for a chrysanthemum show next fall. The society is considering the advisability of presenting a number of chrysanthemum plants to amateurs upon the promise that they will grow them for the exhibition.

UMCA, N. Y.—At the annual meeting of the Ulica Florists' Club held March 12, the following officers were re-elected for the ensuing year: President, Jonathan Aucock; Vice-President, Charles Seitzer; Secretary, J. C. Spencer; Treasurer, Chas. F. Baker; Executive Committee, Peter Crowe, William Mathews, J. C. Bigelow. It was decided to hold a flower show the coming fall.

PLANTS

WANTED.

1000 Plumbago Capensis.
1000 Rhynchosperrum Jasminoides.
1000 Canna Ehemanni.
1000 Clerodendron Balfourii.

In small plants. Send sample and price. Smaller quantities accepted.

A. BLANC & CO.,
PHILADELPHIA, PA.

We will buy all Cactuses offered at a fair price. None but well grown plants wanted. Our stock of 200,000 plants is going off faster than we expected.

THE LATEST AND GRANDEST NOVELTY OUT.

NELLIE LEWIS CARNATION.

Flowers very large and full, and of a color never before seen in Carnations — **AN EXQUISITE SHADE OF PINK.**

W. J. PALMER & SON,

Florists of Buffalo, N. Y. say: "I had an opportunity of seeing Nellie Lewis Carnation in full bloom on Jan. 15th, and a grand sight it was. I consider it a better and finer Pink Carnation than Grace Wilder. Though the flowers do not demand \$1.00 each as we read about of late, they will get there just the same."

For decorative purposes and corsage bouquets, they are unsurpassed. A bowl filled with them used at a dinner a short time ago, lighted up the entire table. Don't fail to place your order at once, as we control the entire stock and have only a limited number of plants.

Price, Rooted Cuttings, per 100, **\$10.00.**
Plants, 2-in. pots, per 100, **\$12.00.**

VICK'S SEEDS NEVER DISAPPOINT, is the verdict of the millions who have planted them.

DAISY SNOWFLAKE

Daisy Snowflake.—This Daisy, if treated like

Violets, will give splendid returns for all labor be-

stowed. It is grown by the thousands and can-

not supply the demand for cut flowers, as it keeps

free from 2 to 3 weeks after being cut, and then

looks as fresh as other white flowers just cut.

The flowers are borne on stout long stems, fine white and

beautifully filled buds, as large as a 5-cent piece;

a great acquisition to florists.

Price, \$1 per doz. free by mail; \$5 per 100 by express

SEE WHAT F. J. KELLER SAYS ABOUT THIS DAISY:

ROCHESTER, Jan. 26th.

Daisy Snowflake is quite a useful flower both for

floral designs and put in with cut flowers, and

when used in small bunches they sell rapidly

with us for funeral designs. We use a great many

plants of this variety as it is cheaper and covers

almost the same space, and keeps fresh considerably

longer. We send and send me every Daisy you can

cut, as I cannot get them fast enough to satisfy

customers. They say it is the best cut flower to buy

because it keeps for 2 to 3 weeks. I feel like to get

some for my immediate use.

Yours truly,

F. J. KELLER.

MISSOURI RISE GREENHOUSE

CRATTANOGA, TENN., March 1st, '91.

FRED, SCHNEIDER, DEAR SIR:—We received our

Daisy Snowflake, and find they are all fine. We

closed please find our check for \$5.00 for 100 more

plants. Please send them as soon as you can, as we

want to get them to blooming well before Easter.

Can you supply the plants in white and what price?

They ship so expediently that we would like to get

some for immediate use.

Very resp. MAC GOWAN & COOK

P. S.—We add to our remittance; please send its

value in Cut Flowers of the Daisies with shipment.

FRED SCHNEIDER, Wholesale Florist,

SEE WHAT F. J. KELLER SAYS ABOUT THIS DAISY:

ROCHESTER, Jan. 26th.

Daisy Snowflake is quite a useful flower both for

floral designs and put in with cut flowers, and

when used in small bunches they sell rapidly

with us for funeral designs. We use a great many

plants of this variety as it is cheaper and covers

almost the same space, and keeps fresh considerably

longer. We send and send me every Daisy you can

cut, as I cannot get them fast enough to satisfy

customers. They say it is the best cut flower to buy

because it keeps for 2 to 3 weeks. I feel like to get

some for my immediate use.

Yours truly,

F. J. KELLER.

MISSOURI RISE GREENHOUSE

CRATTANOGA, TENN., March 1st, '91.

FRED, SCHNEIDER, DEAR SIR:—We received our

Daisy Snowflake, and find they are all fine. We

closed please find our check for \$5.00 for 100 more

plants. Please send them as soon as you can, as we

want to get them to blooming well before Easter.

Can you supply the plants in white and what price?

They ship so expediently that we would like to get

some for immediate use.

Very resp. MAC GOWAN & COOK

P. S.—We add to our remittance; please send its

value in Cut Flowers of the Daisies with shipment.

FRED SCHNEIDER, Wholesale Florist,

Propagation of Dahlias.

As Mr. Wm. F. Bassett asks for information in regard to propagating dahlias by cuttings, I will state my experience with them. Make a good hotbed of fresh horse manure about the first of March, put seven inches of light soil on the bed and when the temperature has gone down to 65°, plant your stock plants. Keep close for a few days, and water sparingly. In the course of two weeks the roots ought to sprout freely and by this time another hotbed ought to be ready to receive the cuttings. I do not advise to put them in a cutting bench but put the cuttings directly into 3-inch pots, using two parts of soil and one of sand; plunge the pots in the hotbed, or if you are in a great hurry, fill the whole frame with empty pots close together, and then fill your pots with soil, pressing it gently with a broom; the cuttings can now be inserted in the pots very quickly. In taking the cuttings, do not use a knife, but break the cuttings off with the fingers; this I consider very important and should the cuttings have become too long, I had rather pinch the tops off, than to cut anything off the base. Shade and keep close a few days, but guard against steam from the manure, and they will strike very easily.

After the cuttings are well rooted and hardened off, plunge them in the field three inches apart, that is if your object is to raise roots for sale. As the roots expand they will invariably break the pots, but having been confined in a small space they are solid which is a great advantage for shipping. I never tried to raise cuttings in the fall; even if it can be done, I do not see the advantage of doing so, as it necessitates keeping the cuttings in the greenhouse during winter. C. A. D.

THE NURSERY BOOK

A Complete Hand-Book of Propagation and Pollination. By L. H. BAILEY, Editor of the American Gardener.

This valuable little manual, having been aided by many experts in many directions. The book is absolutely devoid of theory and speculation. It has nothing to do with plant physiology, nor with any abstruse reasons of plant growth. It simply tells plainly and briefly what every one who sows a seed, makes a cutting, sets a graft, or crosses a flower wants to know. It is entirely new and original in method and matter. The cuts number almost 100, and are made especially for it, direct from nature. The book treats of all kinds of cultivated plants, fruits, vegetables, greenhouse plants, hardy herbs, ornamental trees and shrubs, forest trees.

Among the contents are the following:

PROPAGATION BY SEED.
PROPAGATION BY STRATIFICATION.
PROPAGATION BY LAYERS.
PROPAGATION BY POLLINATION.

THE NURSERY LIST is an alphabetical list of all kinds of plants, with a short statement telling which of the operations described in the first five chapters are employed in propagating them. Over 2,000 Entries are made in the list. The following entries will give an idea of the method: **ACEB** (MAPLE). Stocks are grown from stratified seeds, which should be sown an inch or two deep; or some species, as *A. dasycarpum*, come readily if seeds are simply sown as soon as ripe. Some cultural varieties are layered, but better plants are obtained by grafting. Varieties of native species are worked upon common or native stocks. The Japanese sorts are winter-worked upon imported *A. polymorphum* stocks, either by whip or veneer-grafting. Maples can also be budded in summer, and they grow readily from cuttings of both graft and softwood.

PHYLLOCACTUS, PHYLLOCACTUS, DISCOCACTUS (LEAF CACTUS). *Cylindropuntia*. Fresh seeds grow readily. Sow in rather sandy soil, which is well drained, and apply water as for common seeds. When the seedlings appear, remove to a light position. Cuttings from mature shoots, three to six inches in length, root readily in sharp sand. Give a temperature of about 60°, and apply sufficient water to keep from flagging. If the cuttings are very juicy, they may be laid on dry sand for several days before planting.

GOOSEBERRY. Seeds, for the raising of new varieties should be sown as soon as well cured, in loamy or sandy soil, or they may be stratified and sown two-thirds their length, usually grow readily, especially if taken in August or September and stored during winter. Stronger plants are usually obtained by layers, and the English varieties are nearly always layered in this country. Mound-layering is usually employed, the English varieties being allowed to remain in layerage two years, but the American varieties only one (Fig. 27). Layered plants are usually set in nursery rows for a year after removal from the stools. Green-layering during summer is sometimes practised for new or rare varieties.

Price, in library style, cloth, wide margins \$1; Pocket style, paper, narrow margins, 50 cts.

THE BROOKS SISTERS, Sorrento, Fla.

GALT, ONT.—The Galt Horticultural Society will hold its fall exhibition September 2 and 3, and a chrysanthemum show November 11 and 12.

HAMILTON, ONT.—At the last regular meeting of the Gardeners' and Florists' Club, it was unanimously decided to hold a rose show in June and a chrysanthemum show in November. For the last few weeks business has been decidedly flat. The two elections held recently probably had some effect in curtailing sales. James Wild's greenhouses at Barton were destroyed by fire, March 1. Loss estimated at \$3,000 or more.

LONDON, ONT.—At the meeting of the Florists' and Gardeners' Club on the 2nd inst., the attendance was small, owing probably to the excitement incident to the Dominion elections. A communication was received from the Montreal Florists' Club suggesting the offering of a cup by the various clubs as a national prize, but owing to the small attendance consideration of the matter was deferred. A communication was received from the Toronto Florists' Club inviting the co-operation of the London florists in receiving the S. A. F. in Toronto in August next, and the secretary was instructed to reply that the florists of London would render every assistance in their power to make the visit of the S. A. F. to Canada one not soon to be forgotten. The committee on chrysanthemum show reported progress and suggested that a guarantee fund be raised. A subscription sheet was passed around and in a few moments a sufficient amount had been guaranteed to insure against any deficiency. It was also decided to offer a medal or cup for chrysanthemums at the show, which will be held about the second week in November.

Growing Violets.

The proper handling of the stock year after year is to my mind one of the most effective preventives of the disease. The rotation of the crops as practiced on the farm is still more important in our operations. We now make it a practice to renew our stock of violets frequently, securing the plants from as great a distance as possible, and planting out in a different place each year, one where violets have never before been grown. The results of this plan have been very gratifying to us. We have had splendid crops of most excellent flowers, picking nearly 30,000 flowers for last Christmas and New Years. OTTO MAILANDER.

THE NEW YORK dailies are certainly very liberal in their notices of exhibitions of flowers and plants. The splendid orchid exhibition given recently at the Madison Square Garden, by Siebrecht & Wadley, received full column and even double column reports daily in all the leading New York papers, and what was of still greater importance to the projectors of the exhibition the same papers gave equally lengthy and elaborate advance notices. These liberal advance notices were undoubtedly an important factor in making the exhibition a financial success, and the daily press of New York should receive the thanks of the trade for its liberality.

A CORRESPONDENT writes describing a carnation at the establishment of Mr. John Moore, Little Silver, N. J., which is superior to Grace Wilder at that place, and which Mr. M. has named Isabella. He also advises us that a sample bloom has been sent, but it was either not received or was among a lot that faded without our being able to determine who sent them, through neglect to give name of sender on the package.

TO GIVE the AMERICAN FLORIST your fullest support confine your orders to those who advertise in its columns and when ordering tell the advertiser that you ordered from his adv. in the FLORIST.

G. STRAUSS & CO., - - - WASHINGTON, D. C.

Propagating Dahlias.

Replying to the inquiry of Wm. F. Bassett in the issue of March 5, page 520, AM. FLORIST, how to propagate dahlias. The old roots should be divided and placed on a bench with bottom heat about January 1, cover with dirt and keep moist, but not too wet until the growth starts, then water freely. Begin to make cuttings as soon as the new growth shows two joints, cut just below second joint thus allowing a solid heel. No cutting will root where the stem is hollow. Place the cuttings in sand same as roses, carnations or any other greenhouse plant. C. H. ALLEN.

FLORAL PARK, N. Y.

On page 520, Wm. F. Bassett asks for some information about the propagation of dahlias. My method is to plant the roots in the fall, as soon as they are thoroughly dry, in boxes of dry earth. These are placed under the benches and given no further attention until it is wished to start them into growth, when the roots are put on the benches and covered with earth. Shoots will appear in three or four weeks and when of sufficient size are pulled off and potted in ordinary soil in 2½-inch pots. These shoots will root through the pots in three weeks. When the growths are over three inches long it is well to cut the tops off and treat the same way. Care should be taken though to cut just below a joint as otherwise no buds for the following season will be developed at the base of the stem for new shoots to come from. Fall cuttings will root readily enough but will not mature in time to make roots worth preserving. The trouble with his dahlias probably comes from the fact of there being no dormant buds on the stems, which sometimes occurs under the best conditions; at the temperature given they should sprout quickly.

The most obvious plan for improving his canna is to raise seedlings from it or cross with other varieties and by judicious selections from the resulting plants, some improvement on the type will doubtless be secured.

AROLA III. PERCY W. ARMSTRONG.

Wall Flowers.

Subscriber of Yonkers, N. Y., asks for some information about wall flowers. For three or four years past I have grown a few both in the greenhouse and out side with the best success. Shade in summer while beneficial is not necessary, but in severe zero winter weather they are pretty certain to get scorched by the sun unless in a shaded situation such as the north side of a dwelling would afford. In lieu of this evergreen branches make a perfect protection from the sun rays for them or any other plants of similar character.

They bloom more or less constantly from earliest spring until autumn frosts stop their growth. Seed for out door plants should be sown this month or next and will make strong plants by next fall. Young plants should be raised every season as they seldom survive the second winter. If it is desired to grow them in the greenhouse seed may be sown any time and managed the same as ten-weeks or other stocks. They will bloom in six or eight months, but better results are always obtained from open ground plants lifted and potted in the fall.

They make fine house plants, especially for those in whose windows other flowers will not thrive owing to lack of sun or heat. They will bloom finely in such places and are not injured by slight freezing.

PERCY W. ARMSTRONG.

JAPANESE LILIES, TIGRIDIAS,
AMARYLLIS, ETC.—FINE STOCK.

I TOLD THE TRUTH

In January when I said "I am on time." But how the florists did turn in and "bust up" the time! When the ad. became a well-prevarication, let us say—I hadn't even time to think of it, and a kind customer finally hinted that it was stale, and—something else! Well, I've been trying to scratch out and up and through the mountain of work January dropped on me from "all over," and think I can still print catalogues for the late comers; good catalogues, too. I thank you all, even though I've been heartily "cussed" for not being able to work my place more than 23 hours out of 24. Send along, now, anyway.

H. W. BUCKBEE,

ROCKFORD, ILL.

Begonias! Begonias! Begonias!

I was one of the first in England to handle Begonias, and for some years immense quantities passed through my packing sheds annually, and I was very sorry to be compelled to relinquish their cultivation; **HARDY PLANTS** then demanded all my attention, and these were first, but I have always "kept touch" with the Begonias, as I made up my mind to "pick them up" at the first opportunity. For some time past I have been assiduously working at the **BEGONIA**, I have also been gathering from every known source everything considered superior, and I trust ere long to make my collection second to none. I purpose making

BEGONIAS A GREAT SPECIALTY AT TOTTENHAM.

My knowledge of this family is wide and the facilities for knowing every collection, both private and public, in England and the Continent, has enabled me to secure everything that I consider of great value, especially those possessing **NEW POINTS OF MERIT**, as my aim will be to **WONDERFULLY IMPROVE THE BEGONIA**. I am convinced that but few people can have yet any conception of the capabilities of the plant. I have an **IMMENSE STOCK OF SINGLES AND DOUBLES**, all carefully graded last season, containing every shade of color and those which yield flowers of the largest size combined with perfection of form and improvement of type. In the hope of further developing this attractive flowering plant, I shall plant some hundreds of thousands for next season's show, and I shall be very pleased to exhibit them to any of my friends, who, I am sure, will be surprised at both quality and quantity. **SPECIAL PRICES** for Tubers for present delivery on application.

DAFFODILS AND NARCISSEUS.

I shall have an enormous quantity of these to offer for **Fall Delivery**. Special prices on application as the season advances.

Discounts to Amateurs.

What discounts are the proprietors of private places entitled to on plants, seeds, bulbs, etc.? Should they receive the same discount as the florist, who buys to sell again; even if they buy the same amount? INQUIRER.

[We believe the rule is supposed to be that even where quantity purchased at one time is the same, the consumer should be charged a higher rate than the regular wholesale price to dealers, though if he buys in large quantities, he is entitled to a rate somewhat lower than if he bought the usual small retail quantities.—Ed.]

MR. THOMAS MEEHAN, Germantown, Philadelphia, for many years editor of the *Gardeners' Monthly* which ceased with the death of the publisher a few years ago, has issued a prospectus of a publication to be named "Meehans' Monthly" and to be published by himself and three sons. It will be devoted to general gardening and wild flowers and will undoubtedly find a place for itself. The subscription price is \$2 a year. The new publication has our best wishes for its success.

PLEASE do not fail to mention the AMERICAN FLORIST every time you write an advertiser.

PRACTICAL TESTS.

UNIVERSITY OF CALIFORNIA,
AGRICULTURAL EXPERIMENT STATION,
BERKELEY, August 22, 1899.

MESSES. MORRIS, LITTLE & SON, BROOKLYN.
Gentlemen—In regard to the sample of insecticide submitted by you for trial, I beg leave to state that the preparation has been used on apple trees with the following results: First, four ounces of the insecticide were added to one gallon of water and applied to woolly apple tree with a spray pump. The insects were killed wherever touched by the wash, the result being that the material is effective wherever contact with the body of the insect can be secured. Second, one-half ounce of the insecticide was added to one gallon of water and application made by spray to the recently on rose bushes; the insects were killed on all sprigs reached by the spray. The amount of material submitted for experiment was too small to admit of large scale experiments, which would be desirable. Very respectfully,
(Signed) E. J. WICKSON,
Assistant Superintendent Agricultural Grounds.

FLORENS, L. I., June 25, 1899.

Dear Sirs—I have found your Little's "Antipest" very efficacious in destroying the insects injurious to plants, without affecting the plants in any way. I regard it as the best insecticide that I have used, and I would not be without it. It is easily applied, very effective and can be used with safety. Yours truly,
JOHN HENDERSON CO.

409 FIFTH AVE., NEW YORK, Jan. 12, 1891.

Dear Sirs—We are most willing to testify to the good quality of "Little's Antipest." It is the best and most effective insecticide we have ever used. You can send us another 10 gallons. Yours truly
SIEBRECHT & WADLEY.

QUEENS, N. Y., Jan. 8, 1891.

Dear Sirs—I have been using Little's "Antipest" since last September and have no hesitation in recommending it as by far the best insecticide I ever used. While it is true that I have used it, there is no trace of the compound left on the foliage of plants. Please send us the same quantity at our earliest convenience. Respectfully,
JAMES MACKAY,
Foreman V. H. HAMES GARDEN.

PHILADELPHIA, Pa., Dec 3, 1890.

Dear Sirs—I have been using your "Antipest" for several months for washing Palms, to destroy scale, and I find it valuable for that purpose. Yours truly,
JOHN BURTON.

187 BROADWAY, BROOKLYN, N. Y.

Dear Sirs—I have used Little's "Antipest" for nearly a year and must say that it is the best I have found to do the work effectively having used various other insecticides before without good results. Respectfully yours,
W. C. KRICK.

Eutalia, Uniflora, new 2¢ in pots..... 0.75 6.00
Chrysanthemums, best new and old kinds. Rooted Cuttings..... \$1.00 per 100; \$7.00 per 1000
Colums, best varieties, and Vinca Variegata. Rooted Cuttings..... 1.00 7.00

WANTED IN EXCHANGE:

Pearl Tuberoses, Gladioli, colors mixed. Fancy Caladiums. Correspondence solicited. Write now.

HARRY CHAPPEL,
WILLIAMSPORT, - PENNSYLVANIA.

Money in Gros Colman Grapes. Six hundred and thirty-two dollars in one season from forty Gros Colman grape vines in a sixty-four ft. house, single pitch. No expense, except one and one-half tons of coal, and a very little labor. Gros Colman Grapes sell wholesale readily from \$1 to \$4 per pound according to quality and season. They would pay at 50 cts. per lb., or less. Everyone can have a paying grape by planting well rooted Gros Colman vines, from healthy stock, such as mine. My vines have always been perfectly healthy and vigorous and very productive. Well rooted cuttings ready this spring, one dollar each, cash with order. Express paid by purchaser. For further information address,

ALFRED E. BAKER, Norwytiden Graperies, WEST CHESTER, Pa.
N. B.—We endeavor also to keep in stock the best old and new varieties of carnations, rooted cuttings, plants and blooms—violet blooms and plants, mushrooms, strawberries and tomatoes.

Magnolia Grandiflora.

I am the largest grower of Magnolia Grandiflora in the world, and have them from five inches to five feet high, including all the intermediate sizes. Write for prices.

GIVEN TO

All those selling Excelsior from March 1st, 1891 to March 1st, 1892, and in addition every Florist who sells one gross will get \$2.50 in case he fails to win one of the above prizes. Write for further particulars. This offer is extended only to

RETAIL FLORISTS.

EXCELSIOR FERTILIZER CO. 121 FRONT STREET, NEW YORK.

DON'T

Look on while others make the money. Roll up your sleeves and get to work, and make some yourself.

YOU

Can do it just as well if you will only make the effort.

CATCH

Hold now. Remember every package you sell means money in your pocket, besides the prizes we offer. So waste no time but work to win the highest prize. There should be no let up in your efforts from now

ON.

IT is in half pound boxes with handsome labels in 5 colors—a magnificent package, and an ornament to any store. We have reduced the price to \$10 per gross and will accept orders of one-quarter gross (3 dozen) at a time at this price from those who try for the prizes. Package for trial will be mailed to any florist on receipt of ten cents.

READ.

Dingee & Conard Co. say: "It will promote a healthy and vigorous growth of foliage and on flowering plants an abundance of bloom. This valuable fertilizer has no disagreeable odor, and takes the place of liquid manure which is always so difficult to obtain, and unpleasant to handle. We advise every one who grows flowers to give the EXCELSIOR FERTILIZER a trial."

Carnation Lamborn.

In reference to carnation Lamborn my experience has been this: After two seasons' trial I find it a capital summer bloomer, and it does well in houses as long as the sun is high, but in latter part of November, December, January, February and March it is positively of no value for cut flowers. The stems are weak and brittle, flower does not expand, and it is well nigh impossible to get it into growth. I with several others, have discarded it, and my advice is, do not plant it.

C. E. BAUMANN.

Railway, N. J.

Hot Water Under Pressure.

In March 5 issue Subscriber asks me to answer a few questions and I cheerfully comply. I consider three 2-inch pipes equal to heating as much as two 3-inch, and four 2-inch equal to two 4-inch pipes. I prefer the expansion tank directly over the boiler with aircocks on the highest points of the pipes. In regard to fuel we use 20 per cent less by above system, than by using steam.

C. A. D.

BLUE ROSES.—A correspondent sends us two letters he has received from nurserymen, one enquiring where he can get a supply of blue roses and the other sending a straight order for them, evidently without the slightest doubt that the plants would be at once forthcoming. There seems to be still abundant room for education, even among the nurserymen. Our correspondent says: "We have numerous enquiries of this sort from amateurs but to receive them from nurserymen is to say the least surprising."

DETROIT.—The greenhouses of Charles Warnock at Woodmere, which were destroyed by fire December 4th last, have been entirely rebuilt and are now in good running order. Charley's fellow florists came to his assistance and stocked him up, so that he is in shape for the Easter trade.

IMPROVED FARM AND GARDEN TOOLS FOR 1891.

BETTER. Both Horse and Hand, THAN EVER, better and more money saving. We can not describe them here, but our new and handsome catalogue is free and interesting. A goodly number of new tools will meet your eye here. Among these Gardener's Harrow, Cultivator and Pulverizer, combined adjustable tooth; Market Gardener's & Beet Grower's Special Horse Hoe with Pulverizer; Special Furrower, Marker and Ridger, adjustable wings; Sweet Potato Horse Hoe, four tooth with vine turner; Heavy Grass Edger and Path Cleaner; new Nine Tooth Cultivator and Horse Hoe combined; Special Steel Leveler and Pulverizer combined; all interesting, nothing we have ever made so practical or perfect. Some improved things too are grafted upon our older favorites. A capital LEXER WHEEL, instantly adjustable for depth, is a great feature; put on all '91 goods unless ordered otherwise. Nor have our Hand Seed Drills been forgotten in the march of improvement, nor our Double and Single Wheel Hoes, Garden Plows, Grass Edgers, Etc. Some of them are greatly altered for the better, yet do not forget that no novelties are adopted by us without actual and exhaustive tests in the field. We therefore guarantee everything exactly as represented. Send for Catalogues now.

[Mention The American Florist.]

IT IS A GOOD THING. And like all good things has come to stay. A few doubting "Thomas" still say with the old fogey around the corner that Pine lumber is good enough for him. This little adv. is not for his kind, but for the wide-awake men who find it pays to build in their repairs at the same time they build their house. The time has gone by when it paid to build a so-called cheap commercial greenhouse.

CYPRESS IS BRIGHT, STRAIGHT GRAINED AND DURABLE, in short it is the best wood we know of for greenhouse use. We ought to know something about its good qualities, having worked it largely for ten years past where durability was a requisite. We called the attention of Florists to this feature at the second National Convention at Philadelphia. Our customers write, "We never knew what good lumber meant before" and "the Cypress you sent us is way ahead of white Pine in quality and we hope in durability." Our carpenter says he never worked such good lumber. We are familiar with greenhouse construction, and make a specialty of

SASH BARS, CUTTERS, RIDGES AND SASH, ETC.

Our bars are carefully packed in iron-bound crates, and always reach their destination in good shape. We make but one quality of goods and that the best.

We solicit orders from European Florists.

W. B. CLEVES, Birmingham, N. Y.

Buffalo.

The annual election of the Buffalo Florists' Club was held the evening of March 11, at the Audubon Club parlors. There was a large attendance and the election resulted as follows: President, William Scott; Vice-President, John F. Cowell; Secretary, Daniel B. Long; Financial Secretary, George Asmus; Treasurer, Joseph H. Rebstock; Members Executive Committee, E. J. Mepsted, William B. Miller, Charles Keitsch. The meetings of the clubs will be held until further notice on the second and fourth Tuesday evenings of each month at the Audubon parlors.

An inviting supper had been spread in one of the club-rooms and after the meeting the members sat down to it. When it had been done full justice President Scott spoke of what had been accomplished by the club during the short period of its history. He showed that the club had already done much to advance the interests of floriculture in Buffalo. The financial condition of the club he said, was satisfactory. The secretary, Mr. Long, responded to the toast, "The Buffalo Florists' Club," and among other toasts were: "The Grower," Wm. C. Keitsch; "Science in Floriculture," J. F. Cowell; "The Retailer," W. A. Adams; "Art in Floriculture," J. M. Palmer; "Pastimes of Our Business," E. J. Mepsted; "Greenhouse Plants and Park Decoration," Supt. William McMillan; "The Amateur Florist," J. L. Moore; "The Economy of Heating," E. L. Cook; "Division of Labor in Our Business," J. H. Rebstock; "The Ladies of Our Business," William Belsey; "Our Young Members," George Asmus; "What There is in Soil," B. Myers.

THE STANDARD VENTILATING MACHINERY

Received the highest **HONORS** at Buffalo, N. Y. and at Boston, Mass. Florists Conventions. And it was conceded by all judges to be the easiest working and the strongest and most durable machine in the market. A public test made by L. R. Taft of the Michigan Agricultural College in which two of the other leading machines were represented. The Standard received the most flattering honors and has been the result of selling many machines. With my new connections of shaft it is impossible for the top wheel to slip as is the great fault of all others. Remember I discarded the Sprocket Chain Machine two years ago, and have sold since over 500 of the **STANDARD MACHINES**. Send for catalogue of prices and illustrations to

Trade is still very slow but all feel assured of a good Easter trade. That there will be an abundant supply of flowers is certain.

The Horticultural Society of Chicago will give the fall exhibition or chrysanthemum show; at least the exhibition will be given under its auspices and it will supply the cash to provide against any deficiency though members of the Florist Club will have to attend to the details of arrangements.

At the meeting of the Florist Club held last Thursday a committee was appointed to arrange a schedule of premiums for the fall exhibition and other matters in connection with the exhibition were considered. The present status of the horticultural department at the World's Fair was also discussed. One new member was added to the roll in the person of Mr. Samuel Batson now of Maywood Ill., formerly of Orilla, Ont. At the adjourned session 211 was the best score.

Joseph Curran mourns the loss of his baby girl, an only child. The loss is a severe one to Mr. Curran for he was exceedingly fond of the little one.

For the fall exhibition there will be a guarantee fund of \$1,000 provided by the Horticultural Society to be used in case of a deficiency. The society also has under consideration a plan for a Horticultural Hall. The society found the same difficulty that the Florist Club had experienced in securing a suitable place for the holding of exhibitions.

Mr. E. Mailander has purchased the business of C. & A. Frauenfelder at 1602 West Madison St.

READ THE FOLLOWING.

A Heater to be economical must be a combine of the following three elements, HEATING SURFACE, ITS POSITION, and last through not the least, CIRCULATION. Consider any drop tube boiler where, apparently, Heating Surface is delivered in car load lots, and yet it consumes more coal than an ordinary pot of its own diameter where no surface exists but that exposed to the direct action of the fire, hence the improper circulation of the drop tube boiler: again, take the case of the so-called Coil Heaters, where all the water has to pass to and fro from the bottom to the top through each section successfully, creating intense friction, thereby destroying the benefit of that which would have been gained otherwise. What is wanted to make up an economizing Heater is a combine of the above; that is, a maximum of heating surface exposed to the direct acting fire, assisted by clear, unobstructed circulation with the least possible amount of friction, therefore a glance at the illustration of the NOLAN HEATER or an appeal to its unparalleled record is more forcible than common.

The actual rating of all heaters is conceded without a doubt that they are overrated from 20 to 50 per cent., with the single exception of the NOLAN, hence fancy the complete satisfaction this heater will render when it is actually the successor of any other heater with its absolute rating 25 per cent. above its standard rating, therefore the superiority of these heaters was manifested prior to the closing of the very first season, '86, and it stands today without saying, owing to its sterling merits and marvelous degree of economy rapidly approaching the front, as it is universally testified to by those who go to make up the multitude that are using them that it is the PIONEER of all Hot Water Heaters, barring none.

The durability of these heaters are second to none, the world over. The fact that every heater that has ever been manufactured by me is existing and in actual operation today shows conclusively its pre-eminent staying powers.

**911 FILBERT ST.
PHILADELPHIA, PA.**

CHICAGO, ILL., March 19, 1891.

To the Readers of the American Florist—

*Dear Sirs :—*The many illustrations brought before the public in the AMERICAN FLORIST show the style of our work and are a decided proof that our process is the best adapted for illustrations for Catalogues, such as plants, flowers (as above), fruits, bulbs, decorative designs, greenhouses, and in fact all articles the catalogue men desire to bring before the buyer, in the most natural and perfect representations. We make the cuts direct from the object or from a good, clear photograph in any size wanted.

The reproductions of colored lithographs and different colored flowers receives special attention and we can make perfect photographic cuts in black and white like those shown in this publication.

Will be pleased to furnish estimates.

Respectfully,

PHOTO-TINT ENGRAVING CO.,

GENERAL DESIGNERS AND ENGRAVERS,

CHICAGO.

MAY the Easter sales be larger than ever and at fair prices.

WE are receiving numerous congratulatory letters regarding our Easter number.

Spring Show Penna. Hort. Society at Philadelphia.

The Pennsylvania Horticultural Society this week open its doors to the public on Tuesday evening, the 17th, to view one of the best spring shows, yes, in some particulars the best spring exhibition ever held by the society.

The displays of orchids made by both H. A. Dreer and the Evans' Rowlandville Nurseries—while not out in great variety—there were many interesting features of the collection. Mr. Evans broke away from the old and beaten track and displayed his plants on a cedar tree. The tree was secured erect and must have been quite ten feet high; the limbs were shortened to within a few feet of the trunk and the dendrobiums and other plants were suspended therefrom. There were three or four dozen plants of D. Wardianum, well flowered, and among which there were a number of the better varieties. Nearer the base were a few plants of the Mexican tulip (Cattleya citrina) with its beautiful yellow flowers, and some Odontoglossum crispum. Around the base of the trunk were bedded in moss many anthuriums and several species and varieties of cypripediums. The one which attracted the most attention was C. Harrisonianum. Thereason for this was on account of the announcement recently made of the death of John Dominy, at the ripe old age of 75. This hybrid cypripedium was the first one ever raised in cultivation from seed, and Mr. Dominy was the raiser. It is the result of a cross between C. villosum and C. barbatum; Mr. Dominy naming it after Dr. Harris, of Exeter, England, who first suggested the possibility of crossing orchids, particularly cypripediums.

In H. A. Dreer's exhibit were: Angreum citratum, Cypripedium Harrisonianum, C. Lawrenceanum, C. villosum, C. niveum, C. argus, C. callosum, C. Lowii, C. venustum, Dendrobium pruinatum, D. Devonianum, D. transparens, Phaleonopsis amabilis, P. Schilleriana, Leptotes bicolor, Odontoglossum Rossi majus, Cattleya Triane, Oncidium ampliatum, Chysis hutchinsonii, and two very large plants of Cyrtopodium Andersoni. This orchid had never been seen here before. It is an excellent one for exhibition, and decorative purposes generally. It makes such a large plant and its immense spikes of spotted yellow flowers are very attractive.

The new or rare plant for which Thos. Long received first premium was Spathiphyllum pictum. It is an aroid and suggests the dieffenbachia, a member of the same family, but the leaves of the former appear to have more of an erect tendency of growth than the latter. According to Nicholson the proper name of this plant is Rhodospattia picta.

Mr. Long, who is gardener to A. J.

Drexel Esq., had also a rare and choice collection of palms. I noticed in it Chamaedora elegans, Livistona altissima, L. Hoogendorpii, Geonoma Seemannii, Phœnicophorium sechellarium, Arcua Verschaffeltii and several others.

A new azalea named Vervaeckiana was exhibited by James Dean, Bay Ridge, Long Island. It is certainly the best azalea in cultivation. It is similar in marking to old Souv. de Prince Albert, but the flowers are larger and brighter in coloring. It is a double flower of great substance and measures fully six inches over. Mr. Dean has upwards of two thousand plants of this variety. So well did he like it, that when in Europe last summer he secured all the available plants of it that he could get.

Half a dozen of Azalea rustica were shown by Pitcher & Manda, Short Hills, N. J. The flowers are mostly double and they appear to belong to the mollis section. It is perfectly hardy and forces quite readily.

A collection of decorative plants came from the conservatory of the president—Mr. George W. Childs. A large plant of Liatris borbonica occupied a prominent position in the hall; its broad and spreading leaves made it conspicuous and added much to the effectiveness of the decorations. Mr. John M. Hughes, the superintendent at Wootton, is very proud of this plant and justly so, as it is questionable if there is another such plant within many miles that would be available for this purpose.

The carnation display was better than has ever been attempted heretofore. Mr. H. E. Chitty carried off many of the prizes in the different classes. His 25 Tidal Wave were very fine. Mr. J. C. Chambers' Grace Darling was away ahead of Grace Wilder. Mr. Chambers new variety is an acquisition; the flowers are larger than the Wilder, equally as good in color and apparently a stronger grower.

"The Mammoth Pearl" is a new one, though it was put on exhibition by both Mr. Chambers and Mr. Edward Swayne; but whether it came from one place or not, I had no means at hand of finding out. It is very large, white dashed occasionally with pink. Mr. John McGowan had Lizzie McGowan, Louise Porsch and two others on exhibition. One in color reminded us of rose Mme. Cusin, though there was more yellow in the carnation. It was very pretty. Louise Porsch is a yellow of the style of Buttercup, though the flowers of the new one were not as large as the Buttercups put on exhibition by Mr. Chitty and Mr. Chas. F. Starr. It is however more yellow than the old sort, not having so many red stripes. We are assured that Louise Porsch is a healthy grower and a free bloomer.

The seedling carnations sent by Messrs.

E. G. Hill & Co. created a sensation on being presented to the public. Both John Westcott, of Pennock Bros., and Robert Kift, of Jos. Kift & Son, declare they have never seen such magnificent carnations before. Mr. Westcott further said that he is beginning to think that John Thorpe was not joking when he predicted that flowers of the carnation would be four inches across inside of five years. Most of Messrs. Hill's carnations were on stout and erect stems, large flowers, do not burst the calyx and were decided and pleasing in the shades and colors. The petals were not in a confused mass, but were nicely disposed and this is an excellent character to develop in carnations. In noticing the most striking among them, we descriptions shall be as brief as possible.

John Thorpe struck me as being the star of the aggregation. It is large in size and delicate pink in color. Sea Gull seemed to be the best white, though White Dove came very close. Mme. Reynolds, delicate pink; Mme. Albertine, blush, large; Frank McGregor, red, large; Exquisite, white delicately striped pink; Ben Hur, soft pink; Vulcan, crimson, large; Snowbird, pure white; Mary Hill, delicate pink; Fred Dorrer, scarlet, large; Evangeline (22 flowers of this were sent, which were cut from the seedling plant), pure white.

They were received in good order, but the warm exhibition hall and the escape of the death-dealing illuminating gas very soon caused them to wither. Carnations, which everybody knows, generally speaking, remain in good condition much longer than roses, but it was not the case at this show, the Divine Flower showing signs of distress some time before the roses. Mr. Starr's Wm. F. Dreer attracted a good deal of attention; it is large in size and a shade of pink different from any other variety with which I am acquainted. It is lighter in color than Century and that type, yet darker than the Grace Wilder.

The Lilium Harrisii exhibited by Michael Sammon, gardener to Joseph H. Shoemaker Esq., were the finest ever seen in Philadelphia; the foliage was perfect and the flowers were numerous and of greater substance than is usual in this variety.

The "Gardiner Prizes" brought out some very interesting contributions. Henry Surman, gardener to E. W. Clark Esq., secured most of the prizes.

The Japanese miniature trees exhibited by Dr. Edward H. Williams fairly divided the interest with the other main features. It is said that the trees exhibited are from 50 to 125 years old, yet they are only about two feet high. They look as though they belong to the retinospora or cypress family. It is said that there have been none brought from Japan since the centennial year—1876. They have attracted a good deal of attention, proving a good drawing card, as the daily papers gave very full accounts of these artistic creations of the skillful, patient and persistent Japanese.

The cut roses as usual were much admired. They were superior in some instances to any before exhibited. This is true of Mr. John Burton's Ulrich Brunner, Baroness Rothschild, Mrs. John Laing and Mme. Gabriel Luizet. His Mme. Cusin were finer than any ever before seen here, and his Brides and Mermetts were fully equal to the best.

The Waban naturally created a good deal of interest. It was two days late in getting here, though it came through in fair condition. It is identical with Mermet—excepting in color, which is darker

than is seen in the best produced by the old variety.

There were two competitors for the dinner table decoration. Messrs. Jos. Kift & Son had a neat and prettily arranged table, mostly made up of Bride and Pinks. Pennock Bros. was a study in pink; many fine La France and pink hybrids were used in their's, as well as some good Bruners, and a vase of orchids formed the center piece.

There were some well arranged baskets, bouquets—brides and bridesmaids—which were interesting, apparently, to the young ladies.

Another of the most attractive features was a collection of rare and curious cactuses. This exhibit was made by Mr. A. Blanc, who has made the collecting of cactuses a specialty.

The number of plants exhibited was but a small portion of Mr. Blanc's extensive collection, which numbers many thousands of plants. That they are favorites with the ladies was amply shown by the crowd that gathered in this part of the hall, and the many exclamations of astonishment and delight. Some of the plants seem to give cause for merriment also, and indeed there are many curious forms among them. We noticed one marked the "Dude's Cane," and indeed it does look like the carved head of a cane, at the end of a long stick.

The most remarkable and the most valuable plant shown was a monstrosity of the common snake cactus (*Cereus flagelliformis*). This is a freak of nature which occurred on the common sort several years ago, and which by careful selection and the little skill has been propagated by Mr. Blanc, until he has the strain permanently established. The plant is composed of a mass of curiously contorted and twisted heads—nest-like in shape—from the center of which a normal branch of the plant is seen laying coiled up just like a living green snake. The plant is a most valuable and unique specimen, and Mr. B. is said to have refused \$200 for it, being a pet of his.

Perhaps the most beautiful plants shown are two specimens of *Echinocactus Grusoni*, named the "Golden Cactus." At night these plants are shown at a disadvantage, but in the day time their transparent glassy spines give them the appearance of balls of gold. This is considered the most beautiful *echinocactus* known, and was named in honor of Mr. Gruson, the celebrated manufacturer of Magdeburg, Germany, who is a most enthusiastic cactus fancier. It was discovered a few years ago by Carlos Thieme, a German botanist, growing on the side of a Mexican canyon, and in order to obtain the plants he had to be lowered by means of a rope to a depth of 200 feet. As the plant does not appear to bloom until it becomes very bulky, it has been impossible to propagate it as yet, and only one plant of blooming size has so far been obtained.

Close to these were three very curious monstrosities, one of which has assumed the form of human brains. This is called *Mammillaria nivea cristata*, and is without a duplicate.

The giant cactus of Arizona and New Mexico is represented by a bulky plant about four feet high—Mr. Blanc's larger specimens being too heavy and too large to move. This is the Pila-haya or Saguarro of the Indians, and sometimes reaches a height of 50 to 60 feet, with sometimes three or four branches at the top, looking like gigantic candle-brums. The fig-shaped edible fruit grows on the

top of the plant, and from the great height of the latter, it would be very difficult to remove them, did not this remarkable species itself afford means of reaching it. The old stems when decayed split into a number of thin poles, and by the aid of these the traveller is enabled to knock down the fruit. The Pimas at the old mission of Xavier del Bac had a large stock of Saguarro fruit, which is used for food in various ways.

A most curious monstrosity of this cactus is in the owner's collection, but as it weighs nearly a ton, it could not be removed without danger. It is in the form of a large cocombo shaped head, eight feet in circumference. This head was on a plant 40 feet high, growing at an elevation of 200 feet on the side of a mountain, and great difficulty was experienced in obtaining it. It is the only specimen known to exist and is called *Cereus giganteus cristatus*.

Next we noticed two specimens of the diameter of a flour barrel, and called Indian fish hook cactus (*Echinocactus Wislizeni*). The stems of these are recurved and exceedingly sharp, and being furrowed, the Indians readily tie a line to them and use them with good effect for fishing. When water cannot readily be obtained the Indian takes his knife, scoops out the top of the plant in bowl-like form, and this soon fills with the watery juice, affording a very palatable drink to quench the thirst.

In contrast to this huge cactus we find the little turbine wheel or *Echinocactus turbiniformis*, a great curiosity, carved as if it were a pin-wheel in motion. This little gem produces flowers in abundance at this season of the year, each of which is as large as the plant itself. Although only two inches in diameter it is valued at \$10.

The little and rare Hatchet Cactus was also well represented by a cluster of several heads. It is covered with small tubercles each of which when removed is the exact shape of a hatchet.

Many other rare cacti were shown, one particularly beautiful Brazilian sort, entirely covered with white spots. Another (*E. Cornigorus*) with hooked spines so strong that a twenty-five pound weight can be lifted with them.

The young ladies at the hall seemed to be particularly interested in several specimens of the Old Man Cactus. Three of these were nearly four feet high. This is one of the curiosities of plant life which always attracts attention, and its appearance is certainly something strange to the eye. Some surprise, as the plant is entirely covered with long white hairs. In young specimens this gives the appearance of the head of an aged person. This is a native of Mexico. It is called *Pilocereus senilis*. Many other *pilocerei* are shown, several are covered with what appears to be the finest kind of silk.

The rainbow and the candle cactus were also shown. The former bears most magnificent flowers five inches in diameter, exhibiting all the colors of the rainbow.

The plant itself is entirely studded with a regular ring of pink and red spines. The candle cactus is the one of which the Indians say, "The spines fly at you." When touched they actually burrow into the fingers, and are extremely hard to remove. They are also said to be poisonous to some people. The short branches of this plant drop off in great quantity, forming a barrier around the tree as if to warn careless approachers. Rats gather the thick and hard enclosures around their nests as a protection against snakes.

Many of the most curious looking

VARIOUS ORCHIDS.

1. *Cattleya Trianae* var. *Annae*. 2. *Cattleya Gibeziae*. 3. *Vanda Denisoniana*. 4. *Cattleya Labiata* var. *Autumnalis*.
 5. *Anguloa Ruckeri* var. *media*. 6. *Vanda Tricolor*. 7. *Anguloa Uniflora*. 8. *Vanda Suavis*.
 9. *Vanda Superba*. 10. *Vanda Suavis* var. *Lindenii*. 11. *Anguloa Uniflora Alba*.

grafted plants were shown grafted on the top of another. A beautiful one bore the name of *Echinocactus scopia candida cristata*. It is a semi-circular head of closely set whites pines.

The Living Rock (*Anhalonium fissuratum*) looks like a work of art, showing the most intricate and delicate carving. It is one of the most difficult plants to collect, its color and appearance being so

similar to the rocky formation among which it grows that it is scarcely discernible at a few feet distant. Until a few years ago this plant used to be valued at \$20 and \$25 for very small specimens.

The spineless cactuses were well represented by the Bishop's Mitre. This at a glance appears scarcely to be a living plant, so rigid and unplant-like are its forms that we might imagine that it had been carved from a piece of stone.

What seemed to be an artificial subject was an enormous specimen of Testudinaria elephantina, sometimes called Elephant's Foot or Turtle's Back. It is a large mass of what appears to be bark carved into curious angle forms, and this is the body of the plant. From the center of the upper part a number of climbing stems grow to a height of 20 to 30 feet. It is furnished with delicate smilax-like foliage, densely covered in summer with fine acacia-like flowers. The interior portion of the plant is edible and used as food by the Hottentots. This plant was imported at great expense and trouble from Africa, and it is said to be over 250 years old—weighs 150 pounds. A few plants in this collection that are five years old have trunks not larger than a walnut. It is really not a cactus, but is, when obtainable, grown with them.

The collection represented plants obtained from all parts of the world, as well as a few natives of the United States. Mexico furnishes the largest number. South America and Brazil come next. From Asia and Australia there are some few specimens, and Africa is represented by a number of euphorbias. Altogether about 250 plants were shown which does not represent more than a fourth of the varieties in Mr. Blanc's collection, and these, owing to want of space, were small specimens. An exhibit was not intended, and was not decided upon until a few hours before the opening of the show, hence, and owing to the cool weather, some of the large plants, 8, 10 and 15 feet high could not be shown. For next fall a show is promised that will eclipse any thing of the kind ever seen anywhere.

Judging from the interest taken in this show by the visitors it is easy to see why cacti have become so popular. This, however, is due greatly to the ease with which these plants are grown. They stand rough treatment with impunity, live and bloom for months without water and endure the heated atmosphere of living rooms better than plants usually employed for that purpose. Fine beds of cacti are displayed every summer in the rear of Horticultural Hall, Fairmount Park.

The Black Easter lily, or Arum Sanctum, a native of Palestine, where it is found on the Mt. of Olives, was also exhibited by Mr. A. Blanc, although it was past its prime. There was also another curious arum from Palestine shown by him, which had big black spotted flowers. It attracted a great deal of attention.

The exhibition has been extremely well patronized, the number of visitors on the last night being three times larger than last year.

The following premiums were awarded:

PLANTS IN POTS—GROWERS ONLY.

Orchids—For collection of plants in bloom, 1st C. F. Evans.

Falms—For collection of 25 varieties, in not over 10-inch pots, 1st Thomas Long, also special premium of \$10.

Azaleas—For 6 plants, 6 varieties, not over 8-inch pots, 1st W. K. Harris; 2nd H. B. Surman, gar. to E. W. Clark, Esq. Azaleas—For 2 plants, 2 varieties, 1st W. K. Harris.

For collection of 25 plants, different varieties, in bloom—1st H. Graham's Son. For Ferns—12 varieties, 1st Thomas

Long; also special premium of \$15, 2nd Robt. Wark, gardener to C. H. Clark, Esq. Ferns—For specimens, 1st Robt. Wark. Carnations—For 12 plants, 1st J. W. Colclash.

Hydrangeas—For 6 plants, 1st H. Graham's Son; 2nd W. K. Harris.

Hydrangeas—For specimens, 1st W. K. Harris; 2nd H. Graham's Son.

Spirea Japonica (Astilbe)—For 6 plants, not over 8-inch pots, 1st W. K. Harris.

Cineraria—For 12 plants, 1st Thomas Long; 2nd H. Graham's Son.

Marguerites—For 6 plants, 1st W. K. Harris.

For new or rare plant—1st Thomas Long, gardener to A. J. Drexel, Esq., for Spathiphyllum pictum.

Bedding plants in bloom—For 50 plants grown in 4-inch pots, 1st Gebhard Huster, gardener to Mrs. J. A. Heyl.

Hyacinth—For 25 plants, not more than two of a kind, in not over 6-inch pots, 1st Henry Surman; 2nd Wm. Berger.

Hyacinths—For 12 plants, not more than two of a kind, in not over 6-inch pots, 1st Henry Surman; 2nd Wm. Berger.

Tulips—For 6 varieties, 6-inch pots, 6 of a kind in each pot, 1st William Berger; 2nd Henry Surman.

Tulips—For one box of 50, 1st W. K. Harris; 2nd Henry Surman.

Tulips—For 12 varieties, 12 6-inch pots, 3 of a kind in each pot, 1st Wm. Berger.

Narcissus—For 24 single trumpet varieties, 1st Wm. Berger; 2nd Henry Surman.

Narcissus—For 24 double varieties, 1st William Berger.

Narcissus—Tazetta (Polyanthus), 30 plants, 10 sorts, 10 7-inch pots, 3 bulbs in each, 1st Henry Surman.

Spring bulbs—For general display, not less than 25 pots, in not over 6-inch pots, 1st Henry Surman.

Lilium longiflorum—For 6 plants, not over 10-inch pots, 1st W. K. Harris.

Lilium Harrisii—For 6 plants, 1st Michael Sammon, gardener to Joseph H. Shoemaker; special mention for excellence of growth; 2nd W. K. Harris.

Specimen lily, any variety—1st Michael Sammon, for Lilium Harrisii.

THE "GARDINER" PREMIUMS.

Of the special premiums for spring bulbs offered by John Gardiner & Co.—plants in pots—Henry Surman, gardener to E. W. Clark, Esq., received first for 12 named hyacinths, 12 varieties; 25 named tulips, 5 varieties; pot of narcissus, any variety; specimen lily, any variety; pot or box of lily of the valley; specimen cyclamen; pot or box of Ornithogalum Arabicum; pot or box of freesia and pot or box of polyanthus narcissus. William Berger received first for box or pot of trumpet daffodil and second for 12 named hyacinths, 12 varieties, and 25 named tulips, 5 varieties.

CUT FLOWERS.

For carnations, special mention to Edwin Lonsdale for collection of seedlings, and to John McGowan, Orange, N. J., for five vases containing seedlings and the Lizzie McGowan. H. E. Chitty, Paterson, N. J., received first premiums for collection of cut blooms not over 12 of a kind; 25 blooms, scarlet; 25 blooms, white; 25 blooms, striped on yellow ground; 25 blooms, crimson; and 25 blooms, any other color. He also took second for 25 blooms, pink. Joseph Heacock received second for collection cut blooms not over 12 of a kind; J. E. Chambers first for 25 blooms, pink.

For collection cut blooms of pansies, first to John F. Harris, second to Joseph Heacock.

In the rose classes for growers first

premiums were awarded to John Burton for Perle des Jardins, The Bride, Sunset, Mermel, La France, Mme. Cusin, Mme. G. Luizet, Mrs. Jno. Laing, Baroness Rothschild, Ulrich Brunner and Souv. de Wootton. Joseph Heacock took first for Niphetos, W. F. Bennett, Gontier, American Beauty, Mme. Hoste and any other variety (Pierre Guillot).

In the rose classes for florists only first premiums were awarded to Pennock Bros. for Perle des Jardins, W. F. Bennett, American Beauty, La France, Mme. Cusin, Mme. G. Luizet, Mrs. Jno. Laing, Baroness Rothschild, Ulrich Brunner, Magna Charta, Puritan and any other variety (Watteville). To Joseph Kift & Son for Niphetos, The Bride, Gontier, Mermel and Jacqueminot. To Heron & Nisbet for Sunset and Souv. de Wootton.

DESIGNS, ETC., OPEN TO ALL.

For basket of flowers—1st Joseph Kift & Son; 2nd H. Graham's Son; 3d La-Roche & Stahl.

For 6 corsage bouquets—1st H. Graham's Son; 2nd Joseph Kift & Son.

For plateau of flowers, 20-inch basket, oval—1st H. Graham's Son.

For bride's bouquet—1st H. Graham's Son; 2nd Pennock Bros.

For pair bridesmaid's bouquets—1st Joseph Kift & Son; 2nd Pennock Bros.; 3d H. Graham's Son.

For vase of roses—1st H. Graham's Son.

TABLE DECORATIONS, OPEN TO ALL.

For dinner table decorations, 12 by 4 feet, plants or flowers or both, 12 covers (six ladies and six gentlemen), with favors, no dishes—1st Pennock Bros.; 2nd Joseph Kift & Son.

PLANT DECORATIONS—AMATEURS ONLY.

For decoration of growing plants, not over 100 square feet—1st Robert Wark, gardener to C. H. Clark, Esq.

PLANT DECORATION—COMMERCIAL GROWERS AND FLORISTS.

For decoration of growing plants, not over 100 square feet—1st Kift & Son; 2nd A. Lutz.

FRUITS AND VEGETABLES.

For collection of vegetables, not less than 6 varieties—2nd Gebhard Huster.

SPECIAL PREMIUMS.

To A. Blanc, special mention and premium of \$50 for collection of cacti.

To John M. Hughes, gardener to Geo. W. Childs, special mention and premium, \$50, for collection of decorative plants.

To H. A. Dreer, special premium of \$25 for collection of orchids, etc.

Special mention for exhibit of Japanese dwarf evergreens, by H. A. Dreer.

Special mention to Pitcher & Mandaf for new hardy azalea "Rustica." First time on exhibition in this country.

Certificate of merit to James Dean, Bay Ridge, L. I., for new double azalea Veranena. First time shown in the United States.

Special mention to the W. H. Moon Company for evergreens in pots.

On Thursday evening the exhibits of cut roses were mostly renewed and the battles were valiantly fought over again.

In the growers' list John Burton took first for Perle, The Bride, Mermel, American Beauty, La France, Cusin, Mrs. Jno. Laing, Baroness Rothschild, Souv. de Wootton and Mme. Hoste. To Joseph Heacock for Niphetos, W. F. Bennett, Gontier, Sunset and Pierre Guillot. To Edwin Lonsdale for Mme. G. Luizet and Ulrich Brunner. A special prize was awarded to E. M. Wood & Co., of Natick, Mass., for the new rose Waban.

In the florists' list Pennock Bros. re-

VARIOUS ORCHIDS.

1. *Brassia Caudata* var. *Hieroglyphica*.
2. *Galeandra Devoniana* var. *Delphinia*.
3. *Epidendrum Atropurpureum*.
4. *Catasetum Decipiens*.
5. *Trichocentrum* var. *splendens*.
6. *Compactetia Falcata*.
7. *Phaius Humbloti*.
8. *Catasetum Fimbriatum*.
9. *Dendrobium Brymerianum*.
10. *Trichocentrum Albo-purpureum* var. *striatum*.
11. *Sophranitis Grandiflora*.
12. *Bollea Pulvinaris*.
13. *Cirrhopetalum Pulchrum*.

ceived first for Perle, W. F. Bennett, Sunset, Mrs. Jno. Laing, Magna Charta, Puritan and Souv. de Wootton. Joseph Kift & Son for Niphetos, The Bride, Gontier, Mermet, Mme. Cusin, Jacqueminot, Ulrich Brunner, Pierre Guillot and Mme. Hoste. To Heron & Nisbet for American

Beauty, La France, Mme. G. Luizet and Baroness Rothschild.

Great credit is due to John Westcott, superintendent of exhibition, David Bearn, chairman of the committee of arrangements, and his able vice-chairman John Nisbet, who had charge of the cut

flower exhibit in the foyer. Through Mr. Nisbet's system in keeping all the classes together the matter of judging was much simplified and consequently facilitated.

The advertising and the preparation of the advance notices was well taken care of by Mr. George C. Watson, of John

Gardiner & Co., and to him is due very largely the success of this spring show of 1891.

The daily papers gave good notices as the show progressed; especially was this the case with the *Public Ledger*, that is fortunate in having on its staff one who in his early years was devoted to horticulture.

It is a matter worthy of record that while the weather was on one or two days blustery and cool, it did not rain or snow during the whole of the exhibition, which is something quite unusual during our shows in this city.

A fine lot of plants from Mrs. Harry Ingersoll (Fred R. Sykes gardener) suffered so much with the cold weather during transit that they had to be returned.

EDWIN LONSDALE.

The Carnation Controversy.

There is no doubt but what the readers of the A. F. have learned a great deal about profit and loss, about numbers of flowers to the square foot, and many new solutions in arithmetical problems. But there is one thing yet remains to be done, and it will forever remain, and that is to absolutely present the *best* white, the *best* pink and the *best* scarlet, so that without doubt this selection does universally as well in one place as another. For instance, with me Hinz's White so far beats all the whites I have tried; May Queen beats Grace Wilder, and E. H. Hill beats Portia and all other scarlets, and until I can obtain a better one than any of those named I must continue to grow these. And it is this actual experience that makes the difference of opinion and not that all carnations grown have no merit. It is but a short time since I saw a crop of "Snowdon" that could not be beaten, a crop of "La Purite" equally as good; these were the best varieties for the position they are in or they would be replaced by others.

Now coming down to the best white carnation I have ever seen, as I saw Lizzie McGowan growing at Mr. McGowan's during the season of 1890, taking all the good points it possessed, it certainly was the best; but it remains to be seen whether its good properties will predominate over all other whites now that it is distributed. I have seen superb flowers of Mrs. Fisher, but Mrs. Fisher is not doing equally first rate in all places. The same remarks apply to Lamborn, to Swayne and Silver Spray. Now let us reason together over all these positive differences in opinion and experience. Given 100 plants of 10 white varieties growing side by side in the same soil, subjected to the same treatment in all particulars, the one proving the best has a right to be named the best in that competition. In ten competitions at 10 different places it is safe to say there would be a widely different result.

In my opinion and from my experience it is the soil that has a great deal to do with the perfect elaboration of all plants, and this is a very ambiguous statement I will admit.

We talk about light sandy loam, good bodied loam, strong loam and clayey loam. The component parts of all soils

differ according to the number and quantities of material in their composition, and there are as many varieties of soils as there are acres on the continent when it comes to differences. Chemistry will yet help us to solve some of the problems we are now blindly battling with, but it is slow work.

JOHN THORPE.

Lamborn Carnation.

ED. AM. FLORIST:—I was somewhat surprised to read in the last (March 5) issue of the *FLORIST* that Mr. Nicholson, issue of Framingham, Mass., not only doubted but actually disputed the correctness of my figures as given in my statement printed in the *FLORIST* of February 19. For Mr. Nicholson's information I will simply state that all necessary deductions are made before being carried to the net column, and that that column represents only actual results, and I have every reason to believe is absolutely correct in every particular item.

Mr. Nicholson suggests that by some peculiar process of refiguring I could greatly reduce the value of the majestic column of figures set up by me, and that the total should be not \$3,237.50 but \$1,099.50. Permit me to call his attention to just one small item which alone will cause him to change his views on the subject and I think convince him of the weakness of his defenses and the utter untenableness of his position.

It will be observed in my statement of February 19 that I allow and deduct 50 per cent as cost of production in every case, which in the case of rooted cuttings of Lamborn carnations which are sold at \$15 per 1000, would be \$7.50 on each 1000 sold, but in the case of Lizzie McGowans which are sold at \$100 per 1000 I also deduct 50 per cent as cost of production, which will amount to \$50 on every 1000 sold; now as a matter of fact which must be patent to every reader of the *FLORIST*, the McGowans cost me no more to produce than the Lamborns, and as Mr. Nicholson charges me with the sale of 30,000 Lizzie McGowans the difference on that item alone would be \$1,200 in favor of my sales and the magnificent column of figures which I have reared.

And again in Mr. Nicholson's sale price of his carnations which was, I believe, settled at 2½ cents, 50 per cent was deducted as cost of production, which in his case would be 1¼ cents per flower, but in my case I believe I clearly demonstrated that the sale price of my white carnations was 10 cents, a 50 per cent deduction from which would be five cents or almost four times more than the value of the deduction made from Mr. Nicholson's. Now, if Mr. Nicholson has the time he can figure the matter out, and I am satisfied he will find he has considerable to add to instead of deducting from my majestic column of figures, which I can assure him is none too large or too majestic when the necessary attendant expenses are taken into account. I do not think that Mr. N. will find himself prepared to say that it costs me four times as much to grow carnations as it does himself.

I have not the time to go over and dissect Mr. Nicholson's last letter, in fact I think as far as a demonstration of the subject is concerned there is no need of it; neither have I the disposition or desire to take advantage of his exposed position; if he will make a careful survey of his last letter and compare it with a former one he will I think thank me for this hint.

And although he has been sharp in his criticisms I still have nothing for him but the most kindly expressions of good will, and as a new beginner I congratulate him upon the satisfactory results of his enterprise, and if it is ever my good fortune to meet him face to face I shall greet him cordially.

H. E. CHITTY.

Paterson, N. J., March 14, 1891.

The Carnation Controversy.

The editorial remarks on page 540, issue of *FLORIST* March 12, I fully agree with. I believe when a matter of that kind is reduced to a mere exchange of sarcastic and acrimonious innuendoes the sooner it is stopped, the better; I also believe however, that the editor of the *FLORIST*, and its readers generally, will agree with me that whenever I have taken the trouble, and spent the time to write anything for its pages, it has always been with the hope and expectation that it would be for somebody's good and for the purpose of assisting in the elucidation of some question at issue; my letter of January 12, was no exception, and why so many attacks should have been made upon me in behalf of that letter I have never yet been able to comprehend. But I must confess that I am only too thankful for the occurrence, for it has advertised me, and increased my business beyond anything that I could have reasonably hoped for. Being the assaulted party I have the right of firing a parting shot, but for the sake of harmony and good will, I will waive even that right.

To Mr. DeWitt I will simply state that we are all liable to make mistakes, especially when writing in a hurry, and I own up to making one of \$12.50 on my 2½ per cent. annual tax, which he was not slow to notice, and in his hurry to note it down he made a still greater mistake about the same instant.

H. E. CHITTY.

P. S.—I will state here, if I have never done so before, that my soil is quite light, and I find that where it was packed down solid while setting out the plants, there they do the best.

The Carnation Contest.

ED. AM. FLORIST:—I write now to state that I accept Mr. Lombard's terms as specified on page 532 March 12 issue of the *FLORIST*, and that I pledge myself if alive and well to comply with all the conditions he names, provided, however, that Mr. Falconer is willing to accept the task. I have not enjoyed the pleasure of a personal acquaintance with that gentleman any more than has Mr. Lombard, but am perfectly willing to entrust him with my end of the contract. There will be time for Mr. Falconer to notify us in the interval whether or not he is willing to assume this position.

H. E. CHITTY.

Paterson, N. J., March 18.

Cannot Consent to Act.

ED. AM. FLORIST:—While I sincerely appreciate the kind compliment paid to me by Mr. Lombard in the carnation matter, I cannot consent to act as the referee.

Should Mr. Chitty agree to refer the matter to me, as suggested by Mr. Lombard, kindly put my disinclination to serve in as pretty a way as you can. Sincerely,

WM. FALCONER.

[We could think of no better way than printing the letter as received.—ED.]

Notes From Bay Ridge, N. Y.

BY WM. FALCONER.

Bay Ridge is on the south shore of Long Island and adjoins Brooklyn. Taking the Hamilton St. Ferry (at South Ferry) New York, and the Hamilton St. horse cars and a transfer to the steam motor carsin Brooklyn, to the city limits I found myself the other day at the door of my warm and happy friend Mr. James Dean; far from New York to Bay Ridge seven cents, time about half an hour.

Mr. Dean is a quiet but exceedingly genial middle-aged gentleman, thoroughly practical in his calling and successful in business, and one of the largest growers of Easter plants in the country. He is also a member of the executive committee of the S. A. F.

He has a large greenhouse establishment. Most of the houses are span-roofed, 175 feet long by 22 feet wide, and there are also lesser houses of equal length and a long lean-to pit. All are heated by hot water. Genistas, azaleas, trumpet lilies and hydrangeas are grown in immense quantities for the Easter trade, and there are houses filled with palms, ferns, Dutch bulbs and some other plants.

About genistas: Technically I should say *Cytisus canariensis* and *C. c. var. racemosus*, but I might as well try to get the people to call a lemon verbena an *aloesia*, or a scarlet geranium a *pelargonium* as to get them to call a *cytistus* by any other name than *genista*. By common usage we have made *genista* a common name in the same way as we have made *verbena*, *dahlia*, *fuchsia* and *azalea* common names, and as it is easy to speak, easy to remember, apt and beautiful, why shouldn't we stick to it?

Mr. Dean grows thousands of *genistas* from two to seven or eight feet high and aims to have them in full bloom at Easter, which is easy to accomplish as they bloom naturally at this time of the year. For large specimens he prefers the typical *canariensis* because of its freer habit and the more open, arching and graceful arrangement of its gilded branches. The lesser plants are about equally divided between *canariensis* and its variety *racemosus*. Of recent years, however, he has devoted much painstaking to raising new varieties from seed, endeavoring by selection and breeding to get rid of the stiffness of form of the typical *genistas* and secure something of an open drooping habit, for fashion is objecting to stiff forms among all decorative plants. And he has certainly succeeded in breaking up the race, indeed so much that the exact identity of the typical species and its variety is lost, and a progeny of forms intermediate between the two is now being leant to more to the one than the other, and not a few differing materially in foliage and habit from both parents. From among the multitude he has picked out one plant over which he is exultant, and he declares that he will not sell it for a penny less than \$1,000! It is of the *racemosus* type and bushy, but of an open, graceful, almost drooping nature, and its golden racemes are more inclined to droop than stand erect as in the ordinary form, in fact some of them actually hang down like those of a laburnum. "Sell it for less than a thousand dollars!" exclaimed Mr. Dean, "indeed, I won't." "Why, from this one plant alone I can get up a thousand plants by this time next year."

The *genistas* are grown in pots in summer as well as winter because if planted out in summer they don't live well in fall. They are plunged outside in summer,

though. Once or twice in summer and again in early fall the smallish plants are cut in a little to keep them compact and shapely, but the large plants are allowed their natural freedom.

Hydrangeas. I never before saw so many of these grown together. The varieties are Thomas Hogg, Otakasa and "rosea." But this "rosea" is more a form of *Japanica* than the *rosea* which was introduced from Japan a few years ago as a new species; it is a very beautiful variety, however. The hydrangeas are mostly two or three year old plants and according to size are in six, eight or ten inch pots. Their stout, short-jointed wood, fine thick foliage, and massive heads of blossoms speak eloquently for the mastery style in which they are handled. They are raised from cuttings in spring,

BASKET OF SPRING FLOWERS.

planted out in summer and mulched and watered if necessary, and lifted and potted in fall, then kept in a cold frame till New Year's, when they are started on their way for Easter. At lifting time, in order to get them into moderately small pots the earth is pretty well shaken away from the roots; frost is never allowed to reach the plants in the cold frame lest it should injure the blossom buds; the plants are never dried off and no attempt is made to get them to shed their summer leaves, indeed, they don't do it.

Lilies. Just imagine a spacious greenhouse 175 feet long by 22 feet wide soundly filled from end to end and side to side with *Lilium Harrisii* in full bloom and graded on the slope and as evenly as if they had been set to a straight edge, and looking over their heads you could not see one green leaf for snowy blossoms, and you will have a picture of the interior of one of James Dean's greenhouses. Ten thousand bulbs of *L. Harrisii* he grows, and one bulb in a 5-inch pot to several in an 8 or 9-inch pot, and the plants run from about 2½ feet to 5½ or 6 feet high. I did not see any longiflorum or candidum lilies.

The bulbs are received in July or August and at once potted, set close together in a frame out of doors, watered and then mulched over with hay or straw and left there till November, when they are brought into the greenhouse. A night temperature of 40° to 45° is maintained till about New Year's when it is increased to 60° or 65° or a little more in dull weather. He gets them well rooted to begin with, then starts them early enough so as not to have to rush them, and in

order to have stout, stocky stems and good foliage and the flower buds well developed six weeks before Easter. Then by a moderate temperature and increased ventilation he is able to produce just as firm, substantial and lasting blossoms as those of any longiflorum. The first thing done every morning when the lilies begin to open is to go over them and pick out the anthers, so that the snowy trumpets shall not become stained, or the duration of the blossoms shortened by fertilization.

Do you save any of your old bulbs for another year? I asked Mr. Dean. "Never," he replied, "it wouldn't pay. As soon as we are done with them we dump the bulbs into the rot pile and start afresh."

Azaleas are grown in immense quantity and distributed in several greenhouses. One large house was a sight to behold! Along the center of the middle bench was a thin row of tall, flowing *genistas*, and then the whole bench as well as both side benches was one solid mass of medium sized flat headed azaleas, an unbroken sea of bloom. Then there were large specimen plants of various dimensions, and one of Dr. Moore in full bloom, as well flowered a plant as I ever saw.

Something strange about the cultivation of azaleas is the fact that Mr. Dean finds it cheaper to buy his plants in Ghent than raise his own stock. Nice young stock can be bought over there at a reasonable figure, but the prices asked for large plants are prohibitory; indeed, the stock of large plants in Belgium is very limited. And too, he tells me that while common varieties among small stock are low priced enough, the finer varieties are quite expensive; at the same time he insists the finer varieties are the ones that command the readiest sales and biggest prices here, hence are the most profitable to handle, even if they cost a little more to begin with.

Among his prettiest azaleas in bloom were Bernhard Andreas, deep rose, double; Cocarde Orange, bright, deep red; Comte de Chambord, bluish, white edge, upper segments spotted with crimson; Dr. Moore, deep rose, semi-double; Empress of India, white, rose and carmine, double; Herman Seidel, bright purplish rose, double; Le Flambeau, dark claret; Madame Camille van Langenhoven, white striped with crimson; Madame van der Cruysen, rose, deep spot on upper segments; Roi d'Hollande, bright crimson; Sigmund Rucker, rose bordered with white; Souvenir de Prince Albert alba, a splendid white, Madame Bernard Andreas, a remarkably fine double white, and Herman Seidel, a very distinct double camellia-like white. And there were many others, but, sub rosa, I couldn't pronounce their names let alone spell or remember them. But Mr. Dean is to be equal to this emergency, he has set aside a collection of fifty distinct varieties, all properly and distinctly named, and is going to exhibit them at the forthcoming flower show in New York.

The greatest of all his azaleas, however, is *Verveaneana*. This is a new variety with very large semi-double variegated flowers of fine form and substance. The segments are white with a broad central blotch of pink, and pink markings on the central area. Not only has he secured a large stock—many hundreds—of this fine azalea, but he also has got old Mr. Verveane's son to come over here from Ghent to grow them for him.

In the summer months he turns his azaleas out of doors and plunges them in open frames in which he had grown pansies in winter and spring, and in full sunshine.

His palms were of usable decorative size and included *Cocos Weddelliana*, *kentias*, *arcas* and *livistonas*. And his ferns, mostly *adiantum*s, *pterises* and the like, were from seedling state to 6-inch pot plants; just anything needed for mantel banks, border trimmings, filling boxes or baskets, or if need be furnishing cut fronds. A large number of *adiantum*s are used by the retail florists as pretty plants for store or room decoration and to cut the fronds from as they are wanted. A large pit which is used for forcing lily of the valley in winter is used in summer for growing seedling ferns.

Basket of Spring Flowers.

The basket shown in the illustration was arranged by Florist Wm. Burns, New York. In shape the basket is like a wide-open satchel. The handle is thin and made of rush. The basket is filled with yellow pansies, violets and lily of the valley in one side, and Roman hyacinths, mignonette and forget-me-nots on the other, with a cluster of *Mermet* roses.

Our Orchid Illustrations.

We failed to get the complete set of orchid illustrations into last week's issue so we present some more in this number, making practically a continuation of the series of orchid plates. We shall have more to present in later issues.

New York.

Business continues to be extremely dull, the inclement weather adding (if possible) to its dullness.

All the stores are being stocked with Easter novelties in every imaginable shape and design, and the windows are filled with blooming plants. Elaborate preparations are being made for the Easter trade and every store will have an exhibition of flowers and plants.

Easter coming so early this year it was feared the supply of flowering plants would be short, but later reports from all sides assure us that there will be an abundance of everything and the variety and quality has never been equaled.

Many novelties in Dutch bulbous flowers are here for the first time and the new *genistas* and *azaleas* are very beautiful. *Manda's* double *azalea* is a beauty and valuable on account of its fine color and lasting qualities.

Dean has some things under cover that will surprise visitors to the coming show.

Cut flowers are and will be plentiful; plenty of hybrids and little demand.

There was nothing to note in decorations during the week with the exception of the one executed by Alex. McConnell for the dinner given to Gen. Fitzgerald and staff by W. L. Flanagan, 53 West 39th street. The house was handsomely decorated with palms and orchids, the table being adorned with military devices, the center piece being a large field gun made of violets and *Jacqs*.

Never before has there been such interest taken in and good will shown towards any undertaking as the coming exhibition. It is the one absorbing topic among all, and everyone is working with great determination for its success. Every grower and retailer of note has entered in some of the classes, and it is expected that many from a distance will be present. The best reputed judges of the country have been appointed for the different classes of plants and a committee of lead-

ing society ladies will see to the designs and decorations. Canada and the majority of the states will be represented. Don't be left out if you have anything that will add a lustre to your name; send it on. Society in general has taken the matter up and committees within committees are being formed to ensure its financial success; it will be the grand fete of the season. JOHN YOUNG.

Cincinnati.

At the 28th monthly meeting of the Cincinnati Florist Society February 14, the attendance was the largest that they have had for some time.

The special order of business for the evening was to discuss plans for the building of a flower market which were presented by special committee appointed at last meeting, and drawn by a prominent local architect. This building when completed will be the finest and I believe the only one in the United States that is used exclusively by the florists and seedsmen as a place to display and sell the products of their labor. The building will be constructed of glass and iron principally and will cost when completed \$15,000, to be erected under the bequest of Mrs. Holroyd.

One of our growers surprised the society by producing a *Niphetos* rose that measured 6½ inches across. This bloom was supported by a stiff stem, something that is very seldom seen with this rose.

Mr. E. E. Hill, of Richmond, being present favored the society with quite a little talk on the carnation, which at present is taking a leading part in florists' circles. Mr. R. Witterstaeter had on exhibition several very fine specimens of carnations, and to this gentleman is due the honor of growing the finest carnations brought to the Cincinnati market. A paper on the carnation was read by Mr. R. Witterstaeter which I send you for publication. He was tendered a vote of thanks by the society.

Mr. E. G. Hill ventured the opinion that an extra large bloom of the carnation could not be grown without bursting the calyx. Mr. Hill also stated that he thought carnations should be grown from seed and that the stocks should be changed and that carnations should only have a limited amount of water, and especially overhead. E. G. GILLETT.

Sec'y Cincinnati Florist's Society.

Philadelphia.

The collection of cut roses at the spring show of the Pennsylvania Horticultural Society was very fine. John Burton put his best foot forward and out of 13 entries received 12 first prizes. Taken altogether the show was very good and financially much better than last season.

The outlook for Easter is good. There seems to be plenty of stuff about, and at this time, March 21, wholesale men say that their stock is nearly all engaged.

There promises to be lively times in the retail trade. H. Graham's Son has rented the store at 1516 Chestnut street, next door to Pennock Bros., for Easter week, and there are rumors of several other unoccupied stores being taken by ambitious florists. There are also a few of the growers who have arranged for a city store at Easter time. Jacob Becker and Robert Craig have rented stores on Market street, in the center of the city.

Palms are moving very well for this season. Mr. C. D. Ball says he was never before so busy at this time of the year.

New York Floral Notes.

The exhibition by Messrs. Siebrecht and Wadley at the Madison Square Garden, March 4 to 12, was spoken of as an orchid show, but while these were decidedly the main feature, all kinds of flowers were shown.

On the Madison Avenue side of the garden was laid out the Dutch garden, after a plan taken from the period of 1500. This old Dutch garden was enclosed with cedar frames about 10 feet high. The beds of box wood on the inside were finely laid out in the centre with tulips of red, yellow and the Cottage Maid; around the side beds of the Dutch garden were hyacinths, crocuses, and lily of the valley; the double pink hyacinth was there, with Dutch hyacinths of a light purplish color; these contrasted beautifully with the *Rosamundi* tulip, and with the *Leonides*, a salmon colored one. The weeping spruces, the blooming bay trees, and the fine hedge of this Dutch garden were quite a novelty in these parts, and something long to be remembered.

From the Dutch garden we go into the English garden, where the orchid display was made. The collection of orchids from Rose Hill Nurseries occupied three banks and one bank was where the show of Mr. Kimball, of Rochester, New York, took place, and here his gardener, Mr. Savage, was during the whole week of the exhibition. In Mr. Kimball's exhibit were 52 cypripediums of great beauty, and of much value. There were *odontoglossums*, *caeloglossa* and *denudatum* with a new and then a *zygopetalum* or an *oncidium*. This orchid bank and the others of Messrs. Siebrecht and Wadley were surmounted by a fine palm of *Seaforthia Elegans*; in all of these banks the cattleyas were the most numerous orchids exhibited, some of these were very rare, and all of them were exceedingly beautiful.

Outside of the four orchid banks were beds of *azaleas* with *rhododendrons* in the centre; then there were beds of *cinerarias* with *genistas* in the centre, and *primroses* around the edge. These beds the first day they were shown were lovely indeed. On the sides of the English garden were beds of *Marguerites* and *pandanus* and young palms, with here and there a fine lily.

There were also on the sides of the garden six cocoanut palms from Trinidad, and ten cabbage palms from Florida; these palms were decorated with Florida moss, and some were hung with *penepithes*. In the Spanish garden were three trees of *Dicksonia antarctica*, which were especially beautiful. A bird's nest fern in this Spanish garden was also admirable.

Opening from the grand collection of orchids was a scene of the Ponce de Leon Hotel Garden at St. Augustine, which was very beautifully arranged. From this there was a passage up a flight of stairs to the entrance to the Italian garden, where were placed a pair of palms of the rare *Pritchardia Grandis*; these valuable palms were well worth a trip to see, and they were examined by a great many who could appreciate them. In this Italian garden was a bower of greens, which was surmounted by a large stag's head fern; there was water trickling down from one side of the bower which fell into a large vase beneath. The image of Mercury placed conveniently at one side of this Italian garden, was so arranged that it could be seen and studied from the Dutch garden, at the end of the hall. On the rise of the Italian garden, at both sides of the stairway, were groups

of orchids, in which there were many handsome ones placed. A plant of *Phalenopsis amabilis* *Sanderiana* attracted much attention.

There was a fine display of orchids in the Italian garden, which were sent here by Mr. Arnold; these were placed on one of the palms. A *Cattleya Trianae* alba was placed among these, and this attracted much attention, as it was said to be the rarest flower in the garden; it was perfectly white, with only a spot of lemon color on the lip.

The decorations for the Langdon-Carroll wedding March 3, were arranged by Hanft Bros. The hallway of the house was festooned with asparagus and tulips around the woodwork, which were put on the walls very handsomely to where they opened into the library. The wedding pair received their guests in this library, before a handsome group of plants in pots, among which were genistas, azaleas and rhododendrons. On the mantel pieces were American Beauties, lily of the valley, and pots of acacias. The parlors and dining room were only trimmed with flowers on the mantel pieces but here were many fine orchids.

Klunder made a very handsome piece of orchids which was six feet in length for Sloan's dinner; this was a round basket running six feet both ways and was filled with a variety of cattleyas and dendrobiums; there were on the table four gold vases filled also with orchids. F. A. BENSON.

Basket.

The illustration shows a basket arranged by Florist McConnell, New York. The form is spoken of as spade shaped. The large roses are American Beauties and the smaller ones Mme Hoste. Lily of the valley is used in front and on the handle, the latter being tied with a ribbon.

Baltimore.

The annual election of the Florist Club resulted in the following officers for the ensuing year: President, Wm. Fraser; vice-president, E. A. Seidewitz; treasurer, Wm. B. Sands; secretary, Henry Bauer; financial secretary, Jno. Wiedey; librarian, Chas. M. Wagner.

The reports of the treasurer and financial secretary for the past year showed a most encouraging state of things, and taken together with the very popular gentlemen elected at the meeting produced a general jubilation, which was heightened by the remarks of Mr. Stewart secretary of the S. A. F., who at the request of the retiring president favored the club with a very complimentary speech and expressed a wish that the desire to have the S. A. F. meet in Baltimore in 1892 might be gratified.

Owing to the election several important papers and discussions were postponed of which something will be heard in the future.

Business has settled down to something like a Lent dullness, varied by an occasional ripple in the way of a reception, all minds being intent on the usual pre-Easter calculations; "Will my — be in in time?" Fill the blank with what you will. MACK.

Cincinnati.

The 29th monthly meeting of the Cincinnati Florists' Society was held at the Metropolitan Hotel. The attendance was fair. General order of business, the

discussion relative to holding a chrysanthemum show the coming fall, which was finally carried unanimously.

Mr. B. P. Critchell favored the society with a paper entitled "25 years' experience as a florist in Cincinnati." This was very interesting and was listened to with a great deal of pleasure.

Business for the last few weeks has been rather quiet. Still our different florists have all had something to do and have turned out some very handsome and artistic floral work.

The Easter trade promises to be very good, both for the wholesale and retail dealers. E. G. GILLET, Secretary.

March 14.

Older Fuchsias.

With most plants the trouble is over after wintering them, but with fuchsias it is then the trouble begins. They love a temperate and humid atmosphere, but

BASKET

the thing they love is ordinarily missing in this country, and has been very noticeably so during the past few summers. During the spring what beauties we see: tassel-hung and perfect specimens of symmetry and luxuriance. But alas, at the first bright smile of old King Sol their beauty has "faded and gone," and our once flowers, and leafy fairy-tree is transformed into a naked skeleton. Imaginative people may derive some satisfaction from these leafless stems by shutting their eyes and feasting memory on the beauties that once clothed them, but for prosy people there is little pleasure in them.

From what I have seen and heard the purchasers of fuchsias are largely of the latter class. Have you not had your customers look at your fine spring fuchsias, express their admiration and then say: "No, I don't want them; they are beautiful here, but they never grow for me." Yes, you hear it often, and know that it is only too true.

The fuchsia is universally admired, but its popularity and sale, for this reason, is annually declining. Of course there is a large business done in them still as early window plants, but the numbers of those who buy them later on, or to plant in their yards, is yearly growing less.

As beautiful a flower as is the fuchsia, and so much admired by all, it ought if

possible be saved from complete relegation to that class of flowers that only "bloom in the spring," and I think it can be.

The remedy that occurs to me, is to save our luxuriant "yearling" spring plants, so green and beautiful, wholly for early spring or window plants, and under no circumstance recommend them for any other purpose. And recommend for planting out, only plants two years and more old, since my experience is that under the treatment given the young and tender plants these older ones will grow and bloom in the handsomest kind of style.

Last year on the green before one of the stateroom mansions of our town we saw in a tub a fuchsia six feet high, leafy, and a perfect shower of bloom; and that in the midst of the warmest weather. The variety was Black Prince, and for satisfaction the gentleman hadn't a plant he prized more highly. "As easily wintered as a potato," said he. "In the winter I have it in the cellar, and keep it dry; that's all."

This is a matter should be, and in it there is a good suggestion. What think you? ERNEST WALKER.

Louisville, Ky.

New Roses.

Three of the new roses of 1890 have bloomed with us at Western Springs:

Triumph de Pernet, brilliant red, with good habit and fine form, and if it should prove free blooming it is likely to be a very desirable rose for forcing.

Madame Elise Lambert, white, double, with a beautiful rose tint in the center, marked as C. Souperet is occasionally. The flower is of good size and is sure to prove a desirable variety for bedding, though rather too short a bud for a florist's rose.

Eliza Fugie, the bud in shape is like Niphetos and its external appearance almost pure white, but looking into the rose it shows a yellowish tint of the same shade as Madame Hoste and is hardly likely to excel that variety. J. C. V.

Hotbeds.

The following notes on the preparation and use of hotbeds as practiced by head-gardener Stromback, at Lincoln Park, Chicago, may be useful to some at this season.

Horse manure and straw is the favorite material. It is sometimes mixed with tree bark or leaves from soft wooded trees, and not infrequently with both.

For a frame to be started in February or March the manure is laid in a cone shaped pile from six to ten feet high. When starting the pile care is taken to place in the center manure that has not been frozen, and on this is poured from one-half barrel to a full barrel of boiling hot water. It is then covered with the other manure and built up in a cone shaped pile as before mentioned. The object of the hot water is to insure the heating or fermentation of the manure in cold weather, for unless the manure is quite fresh and none of it frozen fermentation might not otherwise take place.

In about six or seven days the pile begins to heat and it is then turned thoroughly from top to bottom, mixing the heated with the unheated parts. It is considered very important that this operation be done carefully and thoroughly. The pile is then again built up into cone shape. In another five or six days the manure is ready for the frames and is of a dark brown color.

For this latitude it is found that for a frame made up in early March and for such plants as alternantheras etc., that require from 70° to 75° bottom heat, a layer of manure about two feet thick is necessary. It is laid in the frame evenly, care being taken to mix the hot and the cold manure together and then packed down hard. If a cooler temperature than that noted is wanted the manure is packed down very hard; the harder it is packed the less heat will come to the surface.

For alternantheras three inches of rotten tanbark or mixed rotten manure and soil is laid on the surface and on this the plants are placed. Other materials are sometimes used for laying on the surface, all that is necessary is that it is something that the heat may readily work up through. Sand is never used for this purpose as it packs too tight.

For cooler frames, for geraniums etc., in March and early April a one foot layer of the heating material is found to be sufficient. It is packed and covered in the way before described.

The frames have caps or shutters, which are placed on the beds every night until danger of sharp frost is past. And as a matter of course ventilation is religiously attended to. In late spring, on fine days, the sash are entirely removed during the greater part of the day.

The Color Chart.

I have been very much interested by the recent articles on color, but confess to a feeling of disappointment. There is a difficulty at the root of the matter, which is probably not appreciated by those who have always associated with those who understand the correct signification of such terms as magenta, solferina, maroon etc., but to those who like myself get these terms from their application by the general public the use is nothing definite about them. Such terms as red, yellow, pink etc., are more definite, yet I find flowers which to me convey the impression of pink are often called "rose" or "light rose." I have tried consulting the dictionary and I find that maroon comes from maroon a chestnut, yet most of the flowers which I find described as maroon are far brighter than any chestnut and to my eye come much nearer to purple or crimson or a mixture of both. I can see no way out of the difficulty short of a set of colors in enamel, as suggested, all properly labeled and in some form convenient for distribution and reference and I for one, hope the "International Color Conference" will "materialize" at an early day.

Wm. F. BASSETT.

Hammonton, N. J.

SAN FRANCISCO.—At a meeting of florists, nurserymen and seedsmen held March 2d, it was decided that the formation of a club would be of great benefit. Eleven new names were added to the roll of intending members of the club and a committee was appointed to call another meeting two weeks later for the purpose of perfecting the organization by the election of officers.

BUFFALO.—W. J. Palmer & Son, successors to W. J. Palmer, have moved into a new store at 304 Main street. The store runs through to Erie street giving two window spaces at each entrance. The new store is furnished with all the latest improvements, including two large and one oak ice boxes and 25 feet of show cases.

WASHINGTON, D. C.—John H. Ley is about to commence business here and will buy land and erect about 10,000 feet of glass, chiefly for ornamental plants and orchids. Mr. Ley was for eighteen years in business at Croydon, near London, England.

SITUATIONS, WANTS, FOR SALE

Advertisements under this head will be inserted at the rate of 10 cents a line (exclusive of each insertion). Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED.—By a practical florist—private or commercial, long experience. Address B. C. 25 South 4th street, Harrisburg, Pa.

EASTER LILIES.

Electro of this Cut (No. 3434, S.).
A. BLANC, PHILADELPHIA, Pa.
Largest stock of Florists' Cuts in the world. Catalogue of 4,000 cuts 35 cents.

DAISY SNOWFLAKE

Daisy Snowflake.—This Daisy, if treated like Violets, will give splendid returns for all labor bestowed upon it. I grow it by the thousands and cannot supply the demand for cut flowers, as it keeps fresh from 3 to 4 weeks after being cut, and then looks as fresh as other white flowers just cut. It grows from a stem on strong long stems, fine white and beautifully quilted, and averages as large as a decent piece; a great acquisition to florists.

Price, \$1 per dozen, free by mail; \$5 per 100 by express.

SEE WHAT F. J. KELLER SAYS ABOUT THIS DAISY:

ROCHESTER, Jan. 28th.
Daisy Snowflake is quite a useful flower both for floral designs and put in with cut flowers, and when tied up in small bunches they sell very rapidly with us for funeral designs. It is cheaper and covers almost the same space, and keeps fresh considerably longer. Be sure and send me every 1 Daisy you can, as I cannot get them fast enough for my customers. They say it is the best cut flower I buy because it keeps fresh for so long. I have not had to say too much in favor of this useful flower.

Yours very truly, F. J. KELLER.

MISSION RIDGE GREENHOUSES.

CHATTANOOGA, TENN., March 1st, '91.
FRED. SOHN, ZENOS, ILL. We received our Daisies yesterday, and Daisies they are! Enclosed please find our check for \$5.00 for 100 plants. Please send them as soon as you can, as we want to get them to blooming well before Easter. Can you supply the cut blooms and at what price? They ship so excellently that we would like to get some for immediate use.

Very resp't. **MAC GOWAN & COOK.**

P. S.—We add our remittance; please send its value in Cut Flowers if the Daisies with shipment.

Address THE AMERICAN FLORIST CO., Chicago.

IN THE HURRY of getting up the late advertisements for last issue a most unfortunate error occurred whereby the engraving of the ventilating apparatus manufactured by the Quaker City Machine Works was placed in the adv. of Mr. E. Hippard instead of the engraving of Mr. Hippard's apparatus. We presume there are red hot letters on the way from both these advertisers. We very much regret the blunder and trust that we shall be forgiven in view of the enormous rush of work at the time. If some of our readers in want of ventilating apparatus will place immediate orders with these gentlemen we have no doubt they will be considerably mollified. Both the apparatuses are good and readers would do well to look into their merits. The advs. will be found in this issue, each with its proper cut.

WE SHOULD have stated in last issue that the engravings of *Croton variegatum*, *anthurium* and *Passiflora Watsoniana* were made from colored plates issued by *L'Illustration Horticole*. Another fact that should have been noted, but was overlooked, is that the arrangement of plants and flowers shown on the title page was by Mr. H. H. Battles of Philadelphia, who very happily worked out for us the idea suggested to him.

AS A SAMPLE of what some people expect Mr. Manda sends us a postal card recently received by the U. S. Nurseries. It reads: "Please send catalogue. If you have plants for free distribution please send me some."

REPLYING TO E., we do not know of such a party at Chicago, and think you are correct in your belief that he is a fraud.

Catalogues Received.

Fred W. Kelsey, New York, nursery stock; Samuel C. Moon, Morrisville, Pa., nursery stock; Ketten Freres, Luxembourg, Europe, roses; Max Deegen, Krotzitz, Germany, plants; Shady Hill Nurseries, Cambridge, Mass., nursery stock; The Jewell Nursery Co., Lake City, Minn., currants; Selover & Atwood, Geneva, N. Y., nursery stock; W. J. Hesser, Plattsburgh, Neb., plants; Gillett & Horsford, Southwick, Mass., hardy plants; Harlan P. Kelsey, Linville, N. C., nursery stock; W. L. Swan, Oyster Bay, N. Y., plants and seeds; Falls City Wire Works, Louisville, Ky., florists' wire designs; Thomas S. Ware, Tottenham, London, England, hardy plants; same, climbing plants; same, hardy florists' flowers; same, hardy perennials and Alpine plants; W. & J. Birkenhead, Sale, Manchester, England, ferns.

Violet Crops.

Will some of the correspondents of the FLORIST kindly give me an estimate of the number of salable blooms that should be cut from a house 100x11, with 800 square feet of bench room, with the Marie Louise double violet, and for the same space from the Victoria Regina single violet from Oct. 1 to April 1. J. L.

Woodlice.

Will some of your numerous correspondents please tell me and others the best way of destroying that abominable pest to orchids, viz: woodlice.

Re Seed Trade.

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president. JOHN FOTTLER, Jr., Boston secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1897.

Seed Warranty.

Have carefully read "A practical guaranty" in your number of March 12. It seems to me any practical man will at once brand it a delusion and a snare. It seems to be a guaranty made out of an old sieve and will not hold water. The best guaranty to get with seeds is, buy them from some good honest, intelligent seed house.

It has been proven to the full satisfaction of every seedsmen that they cannot afford to guarantee seeds, and to undertake to make them do so, would drive out of the business any house that is worth a law suit.

Not many years ago a farmer bought of a New York house a small quantity of cabbage seed. He claimed that he planted the seed, that it grew well but failed to make heads, so brought suit for the recovery of the crop. The case was tried in a New York City court, before a jury of Chatham street clothiers. The plaintiff had a smart lawyer who managed to prove to the satisfaction of the jury that the cabbages did not head up, but if they had headed, he would have had so many thousand heads. He also proved that cabbages were scarce that season and sold readily for 8 cents per head, which would have amounted to so much and gave judgment for the plaintiff for \$2,500 (Two thousand five hundred dollars) for one and one-half pounds of cabbage seed (1½ lbs.), purchase money \$6.00! I recollect right. At that rate it would not take a very large bag of this kind of cabbage seed to ruin most of our seedsmen.

If our friend who wants to give a "practical guaranty" gets a small dose of that New York cabbage medicine, it will either kill or cure him. There were some very strange things shown up in that trial. The plaintiff produced in court the paper bag in which the cabbage seed had been delivered to him some 18 months or two years previous and which he had saved in a drawer until the trial. There was nothing to prevent that man (had he been so disposed) from going to another seed house and buying as much rape seed as he did cabbage, plant the rape and destroy the cabbage seed, only keep the paper bag until he got ready to make the seedsmen pay for his crop, without the trouble or expense of marketing, easily proving by his neighbors that his cabbages did not head and were worthless. It was this case which caused the seedsmen to prepare and adopt the disclaimer so generally used now on invoices and catalogues in the seed trade.

SEEDS.

READERS of the FLORIST who know of positive errors made by U. S. Appraisers in duties levied and collected which have never been refunded, are invited to send us full particulars of their cases. We know there is wide spread dissatisfaction and believe good cause for it. How much we can locate we are anxious to know, and believe if we secure sufficient and effective data it will be the beginning of a much needed reform.

Narcissus and Romans.

In answer to "Enquirer" in your issue of March 12, how best to treat "Narcissus and Romans to have them flower by December 1, or even by Christmas," I would refer him to that very plain and excellent paper read by Mr. Ernst Assmus at the Chicago convention of the S. A. F. If he hasn't that valuable paper at hand, the following brief directions will assuredly bring success, providing bulbs when procured are sound:

As soon as received those wanted for early forcing should be planted in flats at once, top of bulbs about even with surface of soil; one good watering is sufficient. Place the flats out of doors in any dry spot and cover with three or four inches of soil or tanbark—no matter which. If planted end of August, a few can be brought into the house by first of October. These will flower in November. For a Christmas crop bring them in about the middle of November. Their time of flowering can be regulated by the temperature you give them in the house. Roman hyacinths will bear a strong heat without much injury to quality of flowers, but Paper White narcissus should be grown as cool and light as possible. If Enquirer attempted to force Von Sion narcissus for December and Christmas, very little wonder he failed. Von Sion cannot be got in any perfection before the middle of January. Bulbs of the common daffodil are sometimes sold for Von Sion. The bulbs of the former are much smaller than those of Von Sion and the flowers have many green petals in them.

I have often noticed when visiting other florists' places that their bulb boxes consisted of all sizes and shapes, sometimes six inches deep, sometimes only two inches. For some years I have used only a uniform size which is twelve inches broad, twenty-four inches long and three inches deep. They are made of 3-inch strips 1/2-inch thick for bottom and sides, and the ends one inch stiff. These boxes hold fifty Paper White or Von Sion, sixty Roman hyacinths and the larger kinds of tulips and seventy-two of the smaller kinds of tulips. The material for these boxes, sawed out at planing mill, costs about five cents each. I have with the help of a boy, often put seventy-five of them together of an evening, after the men were gone home and other florists were out at "lodge meeting."

Buffalo, N. Y. W. SCOTT.

Mealy Bug on Coleus.

How can I kill the mealy bug on my coleus without killing the plants? Is there any way to accomplish it, other than hand picking?

IMPORTANT^{TO ALL} FLORISTS.

Our new trade list of 50 pages and our descriptive catalogue of 100 pages is now being mailed to you. Should you not receive a copy within a few days, notify us and we will send you one.

Without any desire to brag we assure you we have the largest and best collection of Chrysanthemums in the country.

All stock is bloomed before propagated from. Our list contains over 600 varieties. We also publish a list of 570 onyms in our catalogue.

Pamphlet of "Summer Flowering Bulbs" 20 pages mailed on application. Price \$5 per 100. Our name does not appear in the pamphlet, therefore it is highly valuable for those having a counter trade. Our list of dormant bulbs is the largest and finest of any in the country.

We have so much of interest to florists and others in our catalogue that we cannot begin to mention any.

Blanche Perry Sweet Pea, proved of great value last year as a cut flower. We have a large stock of fresh seed at 10 cents per cz; \$1.00 per lb.

You will bear in mind we told you last year that Chrysanthemum V. H. Hallock was a good one. You will hear from this later on. We also recommended Charity and White Cap on our last year's set as being particularly valuable for florists' use. Prices in quantity on application.

ORIGINAL AND LARGEST GROWERS OF
LILIUM HARRISII, BETTER KNOWN AS **THE BERMUDA EASTER LILY**.

BULBS NOW READY FOR DELIVERY.

THE BEST IN THE WORLD FOR FORCING FOR WINTER FLOWERS. WE OFFER ONLY STRONG FIELD-GROWN BULBS FROM OUR OWN GROUNDS IN BERMUDA.

COPYRIGHTED, 1890, BY F. R. PIERSON, TARRYTOWN, N. Y.

From a photograph taken the week before Easter, 1890, showing a view in one of our new iron greenhouses, here at Tarrytown, 20 feet in width by 140 in length, of a crop of Liliium Harrisii in full bloom. This house produced over 15,000 flowers for Easter.

This is not only the best by far of all lilies for winter blooming, but it is one of the most profitable flowers that can be grown by florists. It is very easily handled, and the flowers being especially effective for decorative purposes, always command large prices. From its name some have thought it was a bulb for florists' use for forcing for the Easter market only. This is not exclusively so; it derives its name from the fact that, in Bermuda, grown in the open ground, it blooms at Easter time—hence the name "Bermuda Easter Lily"—but by growing it in this country in the greenhouse, with successive lots, it can be had in bloom all the winter from early in December until after Easter; in fact, by special culture, all the year round, or as long as cut flowers are in demand. The fact that it can be forced into bloom by the Christmas holidays adds particularly to its value, as it sells in at a time when flowers are usually scarce and in great demand at high prices, but to accomplish this the bulb must be potted early in August, something depending upon after treatment and the temperature the bulbs are grown in. For this purpose our Bermuda-grown bulbs are indispensable, as in Bermuda the bulb reaches its highest development and ripens off perfectly, and is ready for shipment usually by the middle of July—before bulbs in our own country have hardly begun to make their growth. Our bulbs being grown in the open ground, in a climate naturally adapted for their perfect growth, are particularly strong and healthy at any time.

The extent to which this Lily is being forced for winter flowers will be shown by a sale made by us to a large New York grower, who purchased 20,000 bulbs for his own use. We hear it said occasionally that Liliium Harrisii flowers will not keep—this is owing to improper handling. If cut as soon as open they can be kept for more than two weeks, if in a proper place. It bears shipping splendidly, as the two following letters will show. These were written acknowledging the receipt of flowers shipped last Easter.

J. L. Russell, Denver, Colo., writes: "The Lilies came in excellent shape. I don't think I lost one; it is a pretty good recommendation for your packing." The Fort Worth Nursery Seed and Canning Co., Dallas, Texas, writes: "The Lilies arrived in perfect condition, and we must compliment you on your packing. We would not have thought they would have carried so far packed dry."

THIS VALUABLE LILY IS OUR SPECIALTY.

We grow the bulbs by the acre on our own grounds in Bermuda. We were the first to grow it in large quantities and to offer it at reasonable prices, and we have always been recognized by the trade as **HEADQUARTERS FOR THE BERMUDA EASTER LILY**: supplying the trade as we do, both in this country and in Europe, and we hold by far the largest and the controlling stock of the genuine variety in the market.

The extent of our operations in this bulb alone will be best understood when we state that we expect to sell from our CROP of 1890, over

— **HALF A MILLION BULBS.** —

Be sure you get the genuine Liliium Harrisii. In order to secure "the true variety," purchase your Bulbs from original stock, which is known to be pure. The value of this Lily has led unscrupulous or ignorant parties to plant L. Longiflorum in Bermuda, planting it with Harrisii to increase their stock rapidly when Harrisii was very scarce, thus mixing the stock irretrievably; thereby rendering it absolutely valueless for forcing and we have known instances where these mixed bulbs have been sold to large growers as the genuine variety, where large loss has resulted, and dealers should look with suspicion on bulbs offered at prices less than market rates, as the supply has never yet met the demand; "Mixed Bulbs" only being offered at reduced rates.

Large growers or dealers in this bulb should write us for special prices, stating quantity of bulbs desired, and we will give lowest estimate on the same by return mail.

F. R. PIERSON & CO., TARRYTOWN, NEW YORK, U. S. A.

OUR FREESIA BULBS ARE NOW READY FOR DELIVERY. They are of unusually fine quality, nearly twice the size of Bulbs usually sent out. Intending purchasers should write us for samples and prices, stating quantity wanted.

Dahlia Growing.

I submit the following in response to the query about the propagation of dahlias:

About March 1, place the tubers on benches and partly cover them with damp ashes. Keep a temperature of about 65°. When the cuttings get two or three inches long take them off at the base and with a small knife take out the bottom eyes leaving only two or three at the top. By this means bushy plants on a singletem are secured. Prick them out in sandy soil and as they root pot off carefully into 3-inch pots. When well established harden them by placing out in cold frames, protected from frost until the season to plant out. Cuttings struck in February do not succeed so well out of doors as those struck the beginning of April as the earlier struck cuttings make meagre plants as well as taking up house room longer.

In planting out, a firm stake should support the leader and each of the branches should be tied out to lesser stakes as the plant grows. Unnecessary shoots should be pinched out.

By following this plan fine flowers are produced on bushy, shapely plants, such as to be creditable to any garden.

E. W. WEIMAR, Mt. Vernon, N. Y.

Hot Water Circulation.

My greenhouses lay on a side hill facing south. The grade is about three feet in twenty. I want to build two more houses and the only available space is on the grade above my present establishment. I can grade down so that the level of new greenhouses will be only four feet above that of the old ones. Is it advisable to attempt to heat the new houses from the boiler now in use in my old houses? Boiler carries 1,800 feet of 4-inch pipe and the new houses will require 1,100 feet more. ENQUIRER.

Elm Grove, Wis.

To Drive Ants Away.

I have waited a week to see if any solution to the trouble of "ignominis" was offered. He complained of an invasion of ants in his greenhouse. I know of one, as I have found it sure deliverance and that is tansy leaves—just common green garden tansy. Lay or scatter the leaves about wherever the ants are, and they will depart. Would it not be a good idea to grow a little tansy in greenhouses? HORTENSIA M. BLACK.

Park Ridge, Ill.

Calystegia Pubescens.

The plant advertised in the catalogues this year as *Calystegia pubescens*, if it is the plant I think it is, is the meanest thing to spread that ever was planted. It is known here as the "California rose" and if the ones that plant it in the open ground are not scratching around to get rid of it next spring, I miss my guess. Planted in pots or boxes it makes a very nice plant as it can be trained on some kind of support. It has a very handsome double pink flower about the color of a Hermosa rose. Mrs. E. Kirkville, Mo.

IN THE DIRECTORY change Elmer Reeves, nurseryman, from Waukon, Iowa, to Waverly, Iowa.

PLANTS

WANTED.

1000 Plumbago Capensis.
1000 Rhynchospermum Jasminoides.
1000 Canna Ehemanni.
1000 Clerodendron Balfouri.

In small plants. Send sample and price. Smaller quantities accepted.

A. BLANC & CO.,

PHILADELPHIA, PA.

We will buy all Cactuses offered at a fair price. None but well grown plants wanted. Our stock of 200,000 plants is going off faster than we expected.

APPLE SEEDLINGS.

We now have on the road a large supply of FIRST CLASS APPLE STOCKS suitable for grafting or budding, which will arrive about the latter part of this month.

Price \$2.00 per 100, boxed and freight paid when not less than 5,000 are taken.

FRENCH CRAB SEED.

We expect our last importation to arrive the last of this month. It has been kept moist and will be in excellent condition for Spring planting. No frost necessary to germinate it. Price \$12.00 per bushel.

THOMAS MEEHAN & SON,

March 18th, 1891. GERMANTOWN, PHILA., PA.

HOW TO PROPAGATE:

THE NURSERY BOOK has been prepared with the utmost pains. It embodies the experiences of many experts. The author has been engaged in its preparation for many months and has visited nurseries and men for the particular purpose of acquiring knowledge upon technical points. The whole volume has been read and criticised by Professor B. M. Watson of the Bussey institution, one of the best propagators in this country. All available authorities have been consulted, and particular parts have been submitted to experts. The fruit matter has had the criticism of leading nurserymen, and the head propagator of probably the most important nursery in America has been freely consulted. The orchid matter has been prepared by W. J. Bean of the Kew Royal Gardens. The instructions in the nursery list—which gives the definite methods for each plant—have been read by at least four persons. It is written in a simple, practical style. It contains in compact form about all the knowledge there is on propagation of plants of every kind, hitherto scattered in many books or entirely unwritten. Every florist wants it. About 300 pages; numerous illustrations.

PRICE, in library style, Cloth, wide margins, \$1.00. Pocket style, paper, narrow margins, 50 cents.

— AND —

JARDINIERES IN GREAT VARIETY.

NOTE.—Although forced to play a minor part in the Prize Pantomime, we nevertheless produce the best STANDARD POT in the country, and members of the S. A. F. soon found that to get such they must send their orders to

A. H. HEWS & CO., N. CAMBRIDGE, MASS.

AM EAD OF EVERYTHING.

We Follow None, Prize or No Prize.

Our latest improvements in machinery produce a Standard Pot which for lightness, smoothness and durability, has never been equaled. Customers buying of us will

SAVE ONE-THIRD IN FREIGHT.

And to prove this, we give below a table showing number in Crate and **WEIGHT** of same, which speaks for itself:

Size.	No. in Crate.	Weight.
1 3/4-inch.....	3,000	250 lbs.
2 1/4.....	2,400	250 "
2 1/2.....	1,750	250 "
3.....	1,450	250 "
3 1/2.....	1,250	250 "
4.....	800	350 "
4 1/2.....	600	350 "

It will be seen at a glance, that our pots are one-third lighter than formerly, and yet we claim that owing to the superior quality of our clay and improved machinery, they are stronger than any pot in the market, and we frankly ask you to make the test. **SEND FOR PRICES.**

Steam Heating.

ED. AM. FLORIST.—In answer to enquiries in regard to automatic working of steam trap described in article on rose house, page 516, will say: From 20 lbs to 30 lbs of steam is carried and so long as the pressure does not fall below 20 lbs the action of the trap is as regular as clock work, taking all the condensation directly to boiler. If pressure falls below 20 lbs the trap works slowly and water will gradually back up in pipes, but as soon as steam is raised the trap works it all off without trouble. All fittings should be absolutely tight and if so there will be little or no waste of water and the boiler will very seldom require pumping up. NEMO.

Heating Hotbeds.

Will some one of the readers of the FLORIST tell me what has been done in the way of heating "hotbeds" by steam or hot water? There should certainly be many advantages in this method of heating frames. JAS.

THE CHEAPEST AND BEST OF ALL.

FIR-TREE OIL
INSECTIGIDE—soluble.

FOR PLANTS.—To make a solution for washing or cleaning purposes—Half-a-pint of Fir-Tree Oil to ten gallons of water.

For Green and Black Fly, Thrip, American Blight, Woolly Aphis, etc.—Half-a-pint of the Fir-Tree Oil to two or four gallons of water, or two or three table-spoonfuls to the pint.

For Red Spider and Caterpillar—Half-a-pint of the Fir-Tree Oil to two gallons of water, or three table-spoonfuls to the pint.

For Mealy Bug, Brown or White Scale—Half-a-pint of the Fir-Tree Oil to four or six quarts of water, four to eight table-spoonfuls to the pint.

For Mildew and Blight on Fruit or Foliage—Half-a-pint of the Fir-Tree Oil to a gallon of water, or six table-spoonfuls to the pint.

Used with warm water it is quicker in its action than when cold is used.
Soft or rain water is necessary, and Applied in Wood, Tin or Pot Vessels.—Galvanized Iron Vessels must not be used.

FOR ANIMALS.—For Skin Diseases and Killing Vermin mix one part of Fir-Tree Oil with three parts of warm water and wet the affected part each day. In some cases it may be used stronger. For Ring-worm apply full strength with a brush each day.

FOR BIRDS INFECTED WITH PARASITES.—Put a table-spoonful of Fir-Tree Oil in one quart of warm water and dip the bird in it, taking care that its eyes are protected, hold the bird in one hand for one minute, then dip into clean tepid water; this may be repeated. If necessary a much weaker solution may be used with a soft paper.

Sold in Bottles and Tins.

Manufacturer—E. GRIFFITHS HUGHES,

MANCHESTER, ENGLAND.

SOLD BY ALL SEEDSMEN.

The Carnation.

[Read before the Cincinnati Florist's Society by R. Wittersladter.]

I firmly believe that the carnation is on the eve of a glorious future, and it will be our duty to promote the popularity that she is now being favored with by giving her better treatment and bringing her before the public in the most perfect condition. I think the carnation will run the race a closer race than the chrysanthemum, for she possesses a grace the chrysanthemum can never lay claim to. With the advent of newer and improved varieties, I hope to see Mr. Thorpe's prophecy fulfilled in regard to his ideal 4-inch flowers.

The interest which is being taken in the carnation by the public was never more evident than at our late chrysanthemum show when the visitors lingered with admiring glances at the different vases of the carnation and could not resist the temptation of inhaling their fragrance. This was quite a contrast to the chrysanthemum tables with their vases of ill smelling flowers. When the chrysanthemums first came into popular favor, quite a number of growers in the east were crying down the evil as they thought because it was not a paying crop. Will this be the case with the carnation? I think not; for she will have friends without number to see her put forward and she will repay us by increased profits, as was the case with the chrysanthemums.

The carnation up to within a few years has been a secondary crop with most of us, and treating her in most cases to the poorest house room we had. But now things are changing as the demand for fancy blooms is proving, and the grower will find it to his interest to give her as good a house as the rose. A light dry house is the carnation's delight and will repay the grower if he will give her the same attention the rose is receiving today. We all know from experience that whatever we grow to perfection, success has only been attained by studying the wants and nature of the plant and strictly giving the attention which it requires. Such I found in the case of the carnation. When I first began the growing of the carnation, I threw away as many cuttings as I rooted, simply because I did not know or study its needs. I tried to root in a temperature of over 60° and using almost any kind of

wood; now my practice is entirely the opposite. My propagating bed is over a brick flue and on the west side; the house is heated by a line of pipes under the bench of an adjoining house on the east, the furnace only being used in very severe weather, the temperature of the house being kept between 45° and 50°. Here they root within four to six weeks, according to variety; the Buttercup will always take a week to ten days longer, being one of the most stubborn to root. There are always a number of cuttings in taking out a batch to be put back for another trial. In selecting my cuttings I prefer those on the flowering stem from the flower down to within the last two or three shoots, which I consider too valuable for cuttings, as they make the next crop of flowers. After placing the cuttings in the sand I press the sand firmly about it, and water heavily, and never let the sand show a lighter color, from that time until they are rooted. With this treatment I never have to throw away any more cuttings.

After they are rooted I put them in 2-inch pots and plunge them in cold frames and harden them. I think this practice very beneficial for clay soil. In lifting the plants in the fall, in very sandy soils I don't think there is anything gained in potting. I generally plant in the open ground as soon as it is dry enough to work, or about the latter part of April. I plant in beds of five rows, sixteen inches apart, and ten inches apart in the rows, allowing twenty-four inches between the beds. Should there be danger of the ground becoming too hard, before the weeds appear I begin cultivating, using the Planet Jr. wheel hoe which I consider indispensable in working my out door crops. Of course where ground is no object the easier way would be to plant further apart and use the horse cultivator. I use the wheel hoe as often as necessary to keep down the weeds and the soil in a mellow condition and in the dry summer months, as often as we have a rain no matter how light it be, for this helps to retain the moisture.

To get compact plants, topping must be attended to during the growing season every ten or fourteen days. The last topping to be done depends on the time the blooms are wanted and according to variety. If blooms are wanted for late fall and winter months, of such varieties as Grace Wilder, Wm. Swayne, Prest. DeGraw, Silver Spray and Tidal Wave, the last topping should be done between August 15 and September 1; that will bring them in about the first part of November; and such varieties as Hinze's White, Sunrise, Portia and E. G. Hill about August 1, and Buttercup between July 15 and August 1. Carnations should always be housed before frost, generally beginning about September 20, or sooner if the weather is cool enough.

I shade the house if the glass is clear by going over it with a hand brush and a bucket of muddy water. This is very easily cleaned off by the rain and it is very desirable should the rain be followed by a day or two of cloudy weather. Take off the shading as soon as the plants can take the direct rays of the sun without wilting. I never lift more than a hundred plants at a time and clean off all the dead leaves before planting and again after the plants are established. Keep them as clean as you would your roses.

I plant the back row of the bench the full length of the house first, then stake and tie with white twine, every plant, no matter if they have flowering shoots or not; the plant should never be allowed to become wilted as it can be easily prevented by throwing water on the paths and under the benches, and frequent syringing with the hose. Keep on the ventilation night and day until there is danger of the thermometer falling below 40°; then the house should be closed down for the night. Never let the thermometer rise above 60° before the ventilation is put on in the morning; this should be practiced until severe weather sets in.

No matter how badly flowers are wanted never force your plants at this time of the year, for they are in no condition to be forced. Our main object is to get them as strong as possible before the dull weather sets in. At this period watering should be carefully done. Never water overhead or syringe them, as the water settles in the axils and can never be evaporated in the brightest day at that time of the year. Should this occur very often you will notice that the stem and leaf at that point will become a reddish brown in color, after which the carnation dies. Buttercups show this sooner than any other variety.

Watering is done in the winter months only when the top soil shows a decided light color, and only enough is given to penetrate two-thirds the depth, unless be the bench over the flue, and then just enough to show through. Your success largely depends upon the judgment you use in watering during the winter months. In this respect you cannot be too careful especially on the bench over the flue. Your soil should be in condition to work without balling within four or five days, if not, then they have received a little too much water. The night temperature is kept at 50° and very particular if it should fall to 42° to 45° by morning. But on the night of the first and second day the plants are watered. I am most particular at keeping the temperature at 50° all night. The day temperature is kept at 50° and 55° on days that fires are needed and 60° to 70° on bright days, and ventilation given for a couple of hours at noon or sooner, should the thermometer run higher than 70°.

The demand for long stem carnations is so great now that we can not use at the most about one-fourth short stems to the whole amount. There is no difficulty in cutting Grace Wilder, Silver Spray and Lamborn without sacrificing many buds. The contrary is the case with Wm. Swaney, Tidal Wave and Buttercup, consequently these will have to be cut in sprays, cutting the first flowers short, which will leave two to four blooms to the spray, according to the strength of the shoot.

To get good size flowers in these sprays, I prefer to have plants with from five to eight strong flowering shoots when lifted in the fall; my choice of Buttercup is from four to six shoots.

The greatest evil that exists among us today is crowding the plants on our benches. The sooner we do away with this the better, for the carnation needs as much air to circulate around it as most anything else.

Cultural Notes.

Peristeria elata is a terrestrial orchid from Panama; the native name is *El Spirito Santo*—the Holy Ghost Plant. The center of the flower is in the form of a dove, from which the plant also gets the name "dove flower." It is very successfully grown and flowered at Whitinsville, Mass., by Mr. Geo. McWilliam, gardener to Mrs. J. W. Lasell. At the convention in Boston last August, he exhibited two plants; one in a 12-inch pot had 12 spikes, 34 flowers, and buds to open on the longest spike; and a smaller plant had 8 spikes all very well flowered. The flowers are very sweet-scented. To grow it successfully a stove temperature is required. Mr. McW. does not dry off his plants thoroughly as some growers do. In winter weak liquid manure water is given about twice each week, which keeps the bulbs plump, and gives them strength to send up their flower stems in the summer.

Cyclopogon cristata is a very useful orchid. From two plants in 8-inch pots purchased in 1885 Mr. McWilliam has increased the stock to 26 10-inch pans. These now produce from 30 to 55 spikes, some bearing six flowers, the average being five to the spike. Where fine white flowers are required, these will fill the bill perfectly. When in growth a temperature of 55° is given; in summer plenty of ventilation is given both side and top of the house, and the plants watered with weak manure water; when finished growth, more light and some sun to ripen off the bulbs are given, with only enough water to keep the bulbs from shriveling. The cyclopogon should be more extensively grown in every orchid collection, the pure white of the flower, with its rich yellow stripes in the throat, make it fit for and gives a rich finish to any floral arrangement.

W. S.

At Toronto Next August.

Opinions seem to be somewhat divided here with regard to what has been said and written about the entertainment part of the convention. Some are disposed to advocate less jollification than has been the rule in the past, while others think that the pleasure part of the annual meeting is very important, and consider as it is an acknowledged fact that florists are a hard-working stay-at-home class of men and to such an annual relaxation from business is to be encouraged.

The trouble seems to be that each city where the society has met has vied with the preceding one in showing what they could do when they tried. If this is to be the rule, Toronto is in a rather less favorable position than any place where the society has met before. Coming as it does after Boston, it is to be feared the rule will be broken, badly broken, as we have neither the wealth nor experience to compete with the Hub of Creation.

However I do not think we will be guided by Mr. Mendenhall's advice and give our visitors a diet of porridge, although Mr. M. can have porridge if he wishes it, and we will not press him to indulge in anything stronger than tea and city water. But if Mr. M. means that the entertainment this year must of necessity be meagre, all I can say is he don't know Canada. We "sturdy Canadians" do not live on porridge, corn cake and maple syrup; it might perhaps be better for some of us if we came a little nearer that diet.

But joking aside I think the Toronto Club will try to be guided by what is thought best for the welfare of the society and endeavor to curb any ambitious desire to eclipse Boston, and on the other hand not allow them to go home and say Toronto is the meanest place they ever struck. For my part I intend advocating giving our attention to the ladies and leaving the male persuasion to care for themselves, which they are generally quite able to do.

Would it not be well to have a little discussion on this subject in your paper, if you are willing?
Toronto, Ont.
W. J. LAING.

[We are quite willing to give space to a discussion of the subject.—Ed.]

New York Floral Notes.

Easter this year has come so early that there are but few novelties in the flower market. Genistas are quite plentiful and are well filled with flowers; these have never been grown of such a fine size before; they are the one yellow flower of which we have an abundance. *Acacia pubescens* is quite behind hand this season, the little we have seen of it is not showy at all, and it is very high priced as usual. The *Acacia paradoxa* is in market quite plentifully, but this is not a beautiful flower. The bulbous flower, *Star of Bethlehem*, is in market, and pretty magnolia bushes are brought in; these have eleven and twelve flowers on them. The only real novelty of the season is moss roses and baskets of sweet clover, which comes in white and pink, and is brought in by a Jersey grower for a few of our florists who can afford to pay for it.

The clover basket is quite the rage, it is small and flaring, and is filled with white and pink clover, which has a satin ribbon about it with a bow on the bottom of the basket. Mr. J. D. Boden of 120 Broadway, lately made a design six feet high for Mr. Enos's funeral, which was elaborate and decidedly new; on the top portion of it was a wreath of La France roses and lily of the valley; the space all the way down the shaft was covered with *Asparagus tenuissimus*, which was very handsomely put on; then there was an anchor about 24 inches composed of violets. The base was made resting on white lilies; a satin bow of white ribbon was tied on the wreath at the top of this piece, the ends of which extended to the bottom of the design. This piece was a very beautiful one.

The Klunder Company made an especially beautiful Easter decoration at Grace Church, where the white trimmings and stone work of the altar looked particularly fine trimmed with the lilies. A crown of these was placed on the altar, which had a garland of Jacqueminot roses thrown over it, and a group of genistas on each side of this. A cross 9 feet in height was placed on the communion table. This company also arranged the flowers at St. Bartholomew's Church, where there was an elaborate cross of pink and white roses.

VARIOUS ORCHIDS

1. *Dendrobium Stratiotes*. 2. *Ionopsis paniculata* var. *maxima*. 3. *Restrepia Antennifera*. 4. *Miltonia Bleuana*. 5. *Lycaste Skinnerii* var. *alba*.
 6. *Aganisia Cyanea*. 7. *Aganisia Tricolor*. 8. *Miltonia Spectabilis*. 9. *Sianhopea Ruckeri*. 10. *Aeranthus Grandiflora*.
 11. *Spathoglottis Augustorum*. 12. *Zygopetalum Gibezei*.

Mr. William Burns made an excellent display of plants and flowers in the conservatory which adjoins his store, and which opens from it with folding doors. The genistas and palms were placed high up in the conservatory at the back of the other flowers, and there were

beautiful azaleas among the many plants here shown.

Thomas Gordon has succeeded his brother, Fred Gordon, at No. 71 Broadway. He has had a fine stock of Easter plants, and has made up many pretty designs for sale. The bandeaux of flowers

now seems to be the fashionable trimming for the neck of a bridal dress; this makes a beautiful trimming if done with lilies of the valley, and it will probably be very much worn during the Easter weddings; it can also be put on with daisies, which is always a favorite flower in spring.

Mr. McConnell has had a very fine stock of Easter plants and pretty designs in baskets. He decorated the Fourth Street Methodist Church with a large cross of flowers over which a wreath of roses was placed. The Rev. Dr. Eaton's Church was also trimmed with lilies, genistas and palms. McConnell's store was elaborately trimmed on the outside with beautiful genistas, which made the whole block fragrant.

Thorley took a store in 28th street for his Easter display of plants, as his own store was of insufficient size to hold them all. Bogart also had an additional store located quite near his regular sales-room. Other florists were obliged to lure extra stores over Easter to display their stocks of plants. F. A. BENSON.

Washington, D. C.

Our Easter floral trade in Washington is greatly stimulated by the constantly improved displays some of our more enterprising florists annually make during the last week in Lent. Fisher, Freeman, Garden and Hale, Gude, Studer, Strauss and others all make a fine display, and evidently are well repaid for their trouble, but the Smalls this year have excelled all their previous efforts.

In their large double show window, deepened by an additional platform extending back, they depict the familiar egg rolling scene which for years has been a special feature of Washington child-sport and takes place every Easter Monday in the well turfed grounds south of the Executive Mansion, where the gently sloping mounds are peculiarly adapted for the purpose. In the place of turf lycopodium in its various shades in shallow pots on sand has been most artistically employed by the Smalls, the effect of gently sloping mounds being rendered strikingly natural. The walks are of selected gravel and various dwarf varieties of ferns, palms, azaleas and a few clusters of Rothschilds were made to serve an excellent purpose as evergreens and flowering shrubbery, with tall single specimens of palms in the background to represent trees. Prettily colored little trees lay around and miniature nurses and children in gay attire are earnestly engaged in sport, while from afar peer forth two astonished white rabbits. The whole scene is as it were encased by arched walls of trailing plumosa, while overhead from a gothic dome lined with the berried wild southern smilax hung pendent an immense floral egg, studded with precious gems from which tall electricity colored beautiful rays of light. A mirror on one of the walls imbedded in maiden-hair ferns gave depth and effect to this fairy scene from real life.

Along the center of the spacious store room on a low stand some thirty feet in length are banked from both sides potted cinerarias and hydrangeas, cordon upon cordon of superb Harrisiiis, from the ridge emerging in the center a magnificent C. australis with at either end equally perfect specimens of C. revoluta. At the base boxes densely packed with growing hyacinths of every shade of purple and blue, red and white alternating with variegated tulips, narcissus and jonquils constituted a brilliant and effective border.

The tall mirror in the establishment was encased in a frame of potted Spirea japonica laid on slanting shelves with gracefully inserted tufts of ferns, a huge specimen overhanging the top in luxuriant plentiful rays of light. At the side stood a fine large L. auratum in bloom and to match on the opposite side a tall

Arcen lutescens, while a marvelously perfect roscate azalea covered the entire front, the reflection of its bloom adding greatly to the general effect.

The rose bank was another attractive feature of this display. It consisted of one of the long tiled counters being tiered to the walk as a border a continuous line of the exquisite broad leaved fern was used; to impart variety two large circular baskets, one filled with lilies of the valley, the other with purple violets, were set midway in the back of this border; all else was made up of potted maidenhairs, Spirea japonica, and in hidden vases great clusters of the choicest roses, specimens which any florist show would command prizes were Magna Charta Beauty, Albany, Watteville, La France, Neroli Bride, Puritan, Jacq. Mermet, Ulrich Brunner, Rothschild and others, a veritable embankment of the most superb specimens of roses. A floral representation of the east front of the U. S. Capitol served as a frieze and background to this rare bed of roses.

A very artistic feature, and perhaps the most perfect, consisted in covering on slanting shelving one of the walls completely with Adiantum gracillimum, cuneatum, decorum and other varieties of maidenhair ferns, inserting an oval mirror in the center, the bordering or frame work of which was an exquisite piece of artistic work. Below the mirror on a low counter was a display of orchids of rare beauty—a dozen or more vases filled with cattleyas, more especially of aurea and Warneri, and one large hanging basket filled with odontoglossums, including the highly variegated Wilckema album, Harryannum and Grandiflorum. At either end of the counter stood large round baskets, the one filled with lilies of the valley, daisies, etc., the other with large yellow daisies, mammoth sprays of mignonette, etc.

Two other projecting windows on the north front were banked, the one with assorted hydrangeas of unusual size of bloom, flanked by deep purple cinerarias and a background of palms; the other window had as center piece a well proportioned ivy cross twelve feet high, a growing vine twining around it and a white floral tablet diagonally across the front, studded with precious gems which at night emit electric rays. An assorted foreground of flowering plants with palms and crotons formed a background.

In the rear of the storeroom rises a dense bank of growing tulips, narcissus, jonquils, massed in closely packed boxes. Litanias, A. lutescens and genistas occupied every available space.

All this show in the heart of the city, free to all for a week or more, no wonder the place is crowded from early morn until late at night. Such a display is not only highly educational to a community, but also has a most wholesome effect upon trade in general, and while it benefits the enterprising firm conceiving it at the same time it stimulates business all along the line for their less fortunately situated professional brethren. Z.

The Winter in France.

The winter of 1890-91 has been a hard one for all Europe, and in France it will be long remembered as one of the most destructive in the annals of horticulture. The harm has been caused not so much by the severity of the cold as by its sudden and repeated attacks, and the entire lack of snow during most of the season.

The winter of 1880 was more severe as to actual cold and of longer duration,

but did far less damage. Last summer was cool and rainy and the autumn very late so that in November roses were still blooming in the open air as far north as Paris; toward the end of the month, the thermometer fell in 48 hours nearly and in some places quite to zero F. Work as they might, few growers could shelter and protect more than a very small proportion of their stock and the losses were immense, most plants being in full vegetation. This sudden lowering of temperature was repeated twice, each thaw being followed by a worse "cold snap" than its predecessor. It will be some months yet before the damage can be estimated, but it is certain that there has been sad havoc made among the roses, a large proportion of the soft-wooded ones, teas, Noisettes and Bengal being entirely lost.

Many private gardens have been completely desolated. Rhododendrons are looking very badly, laurels, ornamental Japanese shrubs, photinias, indeed most ornamental plants have suffered. In the park at Versailles, I noticed a hedge row in which nearly half the plants were killed. Young peaches and almonds have suffered, while most other fruit trees have escaped.

In the north, plane trees, chestnuts and most nut bearing trees have sustained considerable damage, the bark and trunks bursting from top to bottom during the severe frosts. The market gardeners lost terribly, and salads were almost beyond price, even at the great Halles Centrales; there was almost a famine of potatoes and carrots, which sold at immense prices; cabbages, leeks, spinach, turnips and beets, indeed all vegetables were insufficiently protected and are almost a total loss.

The following estimate of the losses of the growers for the Paris flower markets only, was furnished by the secretary of the society, and we translate from the *Revue Horticole*: "The four hundred regular growers for the Paris open air markets may be divided into 3 classes: 1st, rose growers; 2nd, those who sell plants from the open ground; 3rd, those who sell pot plants or their flowers."

"The rose-growers, about 50 in number, have lost most, and it will take three or four years to renew their stock in good condition as before. Their losses are estimated at \$200,000.

"The second class contains about 150 growers, all of whose plants were destroyed. Forty of these estimate their loss at \$80,000.

"The last class, about 200 growers of pot plants, will sustain a loss of \$10,000 to \$180,000, and a great many of them will be forced to give up their business, having lost their stock plants as well as young stock.

"Beside these 400, there are estimated to be about 6,000 florists and nurserymen in the immediate vicinity of Paris, to many of whom the winter has been truly disastrous." F. L. V.

Baltimore.

At the last meeting of the Gardeners' Club Mr. Seidewitz read a paper on the profits of rose growing. He showed that the margin is very small, even under favorable circumstances, and that there is nothing to justify the investment of capital in rose growing as a business. One gentleman in our neighborhood who was earning a salary of \$2,000 a year and who thought there was a mine in rose growing has returned to his former calling well satisfied there is nothing in it. Fifty years ago and \$8,000 tell the tale.

Plans were matured for the carrying out of our spring show and our secretary

VARIOUS ORCHIDS.

1. *Filumna Nobilis*. 2. *Trichopilia Suavis* var. *alba*. 3. *Epidendrum Nemorale*. 4. *Leptotes Bicolor*. 5. *Coelogyne Pandurata*.
 6. *Miltonia Spectabilis* var. *Moreliana*. 7. *Zygopetalum Rostratum*. 8. *Catasetum Disco'or*. 9. *Catasetum Bungeorothi*.

instructed to invite our brethren from Washington to come over with the request that they select three of their number to act as judges.

Our Cut Flower Exchange is working admirably under the auspices of the club. We were unfortunate at the start

in getting a dishonest manager, but since we secured the present incumbent every one is satisfied. Nearly all the growers and dealers are in it and it has become the recognized channel of trade in our city.

One firm of commission men in Philadelphia has done us great injury by send-

ing large weekly consignments of cut roses here. They send a man with them who on reaching Baltimore hires a wagon and makes the round of the stores. They are sent on to be sold (and the storekeepers are aware of it) on the principle that half a loaf is better than no loaf,

and if the writer knows or is conversant with the cost of production he questions if there is that same in it, especially when we take into consideration the railway fare, a man's wages and wagon hire. We don't want to be understood as hindering any of our brethren in sister cities from working off any of their surplus stock in ours, what we wish is that they consign their stock to the recognized channel of trade, viz., the Florists' Exchange, No. 120 N. Liberty street. Our manager, J. J. Perry, has reason to believe he could handle the produce that is flooding our stores once a week, and make equally if not better returns to the consignors than they are getting under the present system and so regulate matters that a living price can be had for all. I only wish our brethren in other cities were conversant with the benefits to be derived from an exchange as it exists here. I went into it reluctantly at the beginning and soon pulled out, having detected dishonesty. Now I am thoroughly of the opinion it is the proper way to conduct our business; the supply and demand can be nicely regulated by an adroit manager and living prices maintained. It is a boon to us; the only flaw I have seen is the one mentioned, and I for one regret to see members of the craft in other cities being so badly hurt, as they must of necessity be according to the prices at which they are selling the produce sent to Baltimore. If it is over-production I suppose it will rectify itself, if it is capital that is doing the mischief, that also will in time be the same. The trouble is the innocent often suffer with the guilty. Most other callings are passing through a crisis and we ought not to expect ours to be an exception to the rule. Certain it is we are passing through something when roses are consigned in large quantities to our city and are being sold at the purchaser's own price, which is half price, and from the rich cities of the north.

JOHN DONN.

London.

The new bouquet called the "Shower," was carried by several of the debutantes at the Queen's last drawing-room. It is an elaborate affair, of the most graceful and airy lightness possible, and its dainty sprays fall to a length of 12 to 20 inches. One was yellow, entirely of *Narcissus ovaliflorus* combined with the rich brown foliage of mahonia and ivy leaves, lightened by tiny bunches of the natural *Agrostis pulchella*, which was almost as effective as *Asparagus tenuissimus* in a light bouquet. The *narcissus* were arranged into a semi-round bouquet, falling into a long full spray, behind and below which hung on narrow yellow ribbons several small sprays of *narcissus* and *agrostis*. A bow of yellow ribbon at the hand completed a very artistic effect. Another of cattleyas and *odontoglossums* with maidenhair ferns and lavender ribbons was very beautiful.

F. L. V.

Scarlet Easter Flowers—Cannas.

What have you got? Geraniums are hardly "quality," carnations or nasturtiums are out of the question except as cut flowers; *Begonia coccinea* and *B. semperflorens* var. *gigantea rosea* could be used to good advantage, still they are not enough. Now, just imagine how a group of Star of 1891, Madame Crozy or T. S. Ware cannas in full foliage and full bloom would look assorted with the rich green palms or snowy lilies. Azaleas are gay but stiff; about the

cannas in pots there is no stiffness and they have fine foliage and brilliant gay blossoms. And there is this also in their favor. In the case of lilies, azaleas, hydrangeas, etc., as soon as Easter is past their season of profit is past also, but this is not the case with our finer cannas; serving at Easter does not materially injure the plants, and we take them back and divide them and grow them on with all our might for they are gilt edged stock to handle. Happy indeed on this score is the florist this spring who has a good stock of these three cannas. For years to come you can not overstock the market with this quality of material, for remember, they are plants that appeal to the million more than to the millionaire. It costs very little to grow them in summer and you can winter them under the benches, no crop is easier to handle.

W. F.

Coming Exhibitions.

March 31-April 3, Boston.—Spring exhibition Mass. Hort. Society.

April 7-11, New York.—Spring exhibition New York Florists' Club.

April 14, Los Angeles, Cal.—Rose show Southern California Floral Society.

April 16-17, Syracuse, N. Y.—Spring exhibition Central New York Hort. Society.

April 22-23, Baltimore.—Spring show Gardeners' Club of Baltimore.

May 6-8, San Francisco.—Annual flower show California State Floral Society.

June 6, Boston.—Rhododendron show Mass. Hort. Society.

June 23-24, Boston.—Rose and strawberry exhibition Mass. Hort. Society.

September 1-4, Boston.—Annual exhibition of plants and flowers Mass. Hort. Society.

September 2-3, Galt, Ont.—Fall exhibition Galt Horticultural Society.

September 15-17, Boston.—Annual exhibition of fruits and vegetables, Mass. Hort. Society.

November 3-6, Boston.—Chrysanthemum show Mass. Hort. Society.

November 10-13, Philadelphia.—Chrysanthemum show Penna. Hort. Society.

November 10-13, Chicago.—Fall exhibition Horticultural Society of Chicago.

November 10-13, Minneapolis, Minn.—Chrysanthemum show Minneapolis Florists' Club.

November 10-14, Indianapolis.—Chrysanthemum show Society of Indiana Florists.

November 11-12, Galt, Ont.—Chrysanthemum show Galt Hort. Society.

November —, New Orleans, La.—Chrysanthemum show New Orleans Horticultural Society.

November —, Buffalo.—Chrysanthemum show Buffalo Florists' Club.

November —, Washington, D. C.—Chrysanthemum show Washington Florists' Club.

Returns Per Square Foot.

In determining the comparative profitability of the various roses and other flowers some growers have adopted a system which gives them the cash returns per square foot. This has several advantages as it gets to the point at once and shows all such matters as productiveness at the best selling season, quality of bloom, etc.

A large and successful eastern grower

has favored us with a copy of his record for one season and we print it below.

In his accompanying note our correspondent says: "It is necessary to state that the Bon Silènes, Gontiers and Mermetts were thrown out about two months earlier than the other kinds in order to make room for plants. About 5 per cent of my stock was sold at retail and is not included in this list, but would I judge cover all varieties. The measurements cover the entire ground space of the houses, paths as well as benches. I paid no commission for selling, sales being by contract or on orders direct to the place. I have not carried out the fraction in calculating the receipts per square foot."

	Sq. ft. of space.	Total Receipts.	Receipts, per sq. ft.
Perle and Sunset.....	2,500	\$1,582.58	\$.63
Bon Silène.....	700	276.80	.39
Niphetos.....	450	368.03	.81
Bennetts.....	1,100	732.54	.66
La France.....	1,540	1,063.14	.69
Bride & Mermet, 2,000		1,148.06	.57
Am. Beauty.....	1,440	1,003.05	.69
Gontier.....	500	215.49	.53
Mme. G. Luizet.....	1,800	949.30	.52
Bar. Rothschild.....	600	286.15	.47
Heliotrope.....	500	158.38	.30
Smilax.....	6,500	2,641.45	.40
Asparagus ten.....	1,500	695.37	.46

Begonia Clementinae.

We present herewith a beautiful illustration of this begonia which bids fair to be one of our most popular ornamental leaved sorts. The leaves are olive green tinged with reddish brown and blotched with silver. It is so easily grown that it will no doubt be very useful as a pot plant.

Leaves of Advice From a Limb of the Law.

(For Young Florists)

XXV.

A BOILER TRANSACTION.

Pray calm yourself, you are as red as a paeony. You are fairly boiling over. Boiling over? Yes, that expresses it exactly. Oh, I see, trouble with that boiler of yours. Well, when you have let off sufficient steam to render it safe for me to sit down and talk it over with you I'll do so.

But before you say a single word let me remind you of a warning I gave you at the time. Don't want to hear it? Of course not, no man likes to be reminded of his mistakes, but I shall not be silenced. I am either your legal adviser or I am not. When you purchased that boiler and told me that your contract with the seller was that he should send a man over to your place to set the boiler I said to you: Don't fail to have a memorandum from him containing specifications of what work is to be done and how it is to be done, quality of brick, number of layers, quality of cement, and also a guaranty that the boiler will do certain service. You pooh poohed the idea, said it was a very simple thing and that the man had assured you it would work satisfactorily.

Well, you went ahead and now you see the consequences. You are at loggerheads with him. You have been obliged to call in another man to do the work or wait again before the boiler would work satisfactorily. Now comes the afterclap. The first man renders a bill for the full amount due him just as if his work had been performed properly.

You ask me whether he has a legal claim for the full amount. It all depends

BEGONIA CLEMENTINÆ

upon the contract you had with him. I assume that he guaranteed that he would set the boiler properly so as to make it answer the purposes for which it was bought. In that case you have a right to deduct from his bill all the extra expense to which he put you, and if you could prove that your stock suffered from

his failure to set the boiler as agreed you would have a claim for damages against him for all loss directly occurring from his neglect or lack of skill.

This is a plain proposition, but in the event of a law suit it would be necessary for you to have expert testimony to show that he failed to do his work in a proper

and skillful manner. Such a law suit might easily call for the expenditure of more money than the boiler is worth. Therefore I advise arbitration if possible. Let both of you agree upon some one expert to examine the matter and report what deduction if any should be made. Or possibly you and he by talking the

whole transaction over might be able to reach a settlement yourselves without the interference of any outside party.

"I'm a lawyer, but an honest one. Don't laugh, it is not a joke. I am not trying to be funny."

Now I come to another phase of this question. If it be that after the boiler was set in accordance with the contract with the seller, then for some reason over which he had no control it would not work—say because there was not draught enough, or because from the peculiar position of your houses, then in that case you would be obliged to make all the changes at your own expense.

You see this puts a different aspect on the matter. I may sell you a good stove, but I don't guaranty that your chimney has a strong enough draught to make it draw. I may sell you some patented device, but I don't guaranty that it will work well under all circumstances, but only under given circumstances.

So if the boiler man said, "I'll set that boiler so and so," and you acceded, but upon the trial being made you couldn't get the result you sought for, why you'd have no right to fall back upon him and say: "I find your boiler doesn't work well, you must set it over again." You perceive it all depends upon whether there was any breach of contract upon the boiler man's parts. If a man changes his mind that is his own business and he must pay for it.

Now it may be that you made a "loose contract" with this boiler man. What I mean? Well, I'll explain. Suppose you contracted with him that he should set the boiler properly and no more. In that case it would be for experts to testify whether he kept within his contract or not. "Properly" might mean one thing or it might mean another. It might be properly set when it only yielded one half of the steam you needed.

Loose contracts are often worse than none. In no transaction should a man be more careful than in making a contract with a mechanic. Have everything set down in black and white, everything specified. A mechanic has an advantage over you. He may lien your premises for an unpaid account. A mechanic's lien may be foreclosed; it means a legal contest. It is vexatious.

Therefore, in case you can effect a settlement of this matter you must not pay the bill until you first examine the record to see whether the boiler man has liened your premises or not. In case he has you must secure a satisfaction of the lien before you settle with him.

Anyway, this transaction should teach you a lesson. While it may be true that disputes do arise even when there is a written contract, yet they are not so apt to occur, and if they do arise you stand so much better when the matter comes up in court.

The law loves a careful business man—one who keeps his accounts in perfect order and who never allows himself to be caught napping by a dishonest or subtle adversary.

I once knew a man who kept a daily journal for twenty years before he gained a single material advantage by so doing, but at last his reward came. By reference to an entry in the journal it was possible for him to prove a will made by his uncle to be a forged one, and thus by a single stroke of a pen he earned a cool \$20,000, for with the will out of the way he was the sole heir to his uncle's estate.

I'm glad to see that your high color has gone down. You are now in a better condition to think the boiler matter over.

Don't force a fight unless you are quite sure you are right.

UNCLE BLACKSTONE.

A Visit to James Dean's, Bay Ridge, L. I.

Every florist who has read Mr. Jas. Dean's most practical essay on the "Importance of the Easter Plant Trade and How to Prepare for it" will naturally think that Mr. Dean's place is well worthy of a visit at this season of the year, and so Mr. J. N. May and Mr. Robert Kift and the writer found it to be.

Lilium Harrisii occupied a great deal of space and they were in excellent condition. Mr. Dean pointed out the evil effects in undue forcing of these standard Easter plants. He had occasion to prepare some plants that were to be used in decoration a few weeks before Easter, and the plants in order to get them into bloom in time were subjected to a temperature of 75° at night; the result was the plants were tall and thin and the flowers lacked substance. Not so with his regular Easter stock. They had been brought on in a night temperature of 60° or a little more, and the difference was quite marked. The plants were ample foliage of a deep rich green and the flowers were large and of great texture. The question was raised about the superiority of *longiflorum*, as having naturally more substance than its close relative, but Mr. Dean was quite confident that the older variety could not be any better in that respect than those before us, and we certainly agreed with him.

The azalea is accorded a very prominent position here, and they were a grand lot; a pair was pointed out to us that had been sold to one of the leading New York florists. The price per pair was \$100, and every beautiful pair they were, fine in bud and bloom and symmetrical in shape.

We also saw the new one, about which we have heard so much, and not one word more in its praise has been said than it deserves. It is certainly a remarkable plant, one that every person who has a greenhouse will want at least one. Its name is *Vervaneana*. Mr. Dean liked it so well when he had it in bloom last year that he went over to Europe last summer and bought up all the plants of it that he could find. This is sufficient evidence of its value, for Mr. Dean is one of the most conservative men in the business. The flower is very large and double, it measures six inches over, in color it is variegated, delicate and bright pink with a crimson blotch in the center. We congratulate Mr. Dean on being able to control upwards of two thousand plants in various sizes of this notable greenhouse plant.

The *cytisus* or *genistas* are another prominent feature here. Plants from ten feet high to the tiny plants in small pots were here in large numbers, especially the long and slender batch in bench pots were a very useful size, as they were a nice shape and well flowered. But what proved to be very interesting were a lot of seedlings which the proprietor has undertaken to raise with the end in view of improving this useful class of decorative plants. Out of some hundred, which were in bud and bloom, there were no two alike, some were remarkable for the larger racemes, others for the individual florets being of larger size, while again some plants assumed a graceful weeping habit. One in particular struck us all as being of rare merit, and we do not hesitate to say it will be heard of in the not far distant

future. A valuable quality in the *genista* is the facility with which it may be propagated, so that, if this plant retains its valuable peculiarity, we will not have to wait very long before it is put upon the market, which will be welcome news to all who are interested in spring flowering decorative plants.

There were other things of interest to be seen here; ferns in great variety and in good shape, also the leading species of palms for florists' use were in various sizes and in excellent health. A lot of *Cocos Weddelliana* were the best I had ever seen. They were growing in 3-inch pots, a foot to eighteen inches high, and of a healthy dark green color. A lot of *Latania borbonica* were pronounced the finest batch in or around either New York or Philadelphia. I cannot conclude without saying that I was more than pleased with my visit.

EDWIN LONSDALE.

Not So Criminal.

Mention is made in an exchange of the "criminal waste in spending thousands of dollars for the flowers that decorated the rooms at a recent Philadelphia wedding." It is strange that some people conceal their ideas of wastefulness in penitences for objects that cannot be eaten on such occasions. We hear very few complaints of the wastefulness in spreading salads, creams, terrapin, croquettes and pates before people who have all breakfasted well, and all expect to have their dinners when they go home. But the flower trade, that employs hundreds of estimable and enterprising men and women, is held to be the one extravagance because its efforts and the effects of its skill are almost as fleeting as the hues of an exquisite sunset. All the same, money spent in floral arrangements and decorations is well spent, if the spenders can afford to spend money at all. Of course this is opposed to our native Philadelphia ideas—Quaker-Anglo-Saxon and German descended—that heavy feasting is akin to godliness and permitted, while other things are vanities. It is becoming the custom to send wedding flowers to the hospitals afterwards, and who shall say that the costliness does not, in two ways, redeem itself? First, because flowers are the most beautiful things with which we can surround ourselves or welcome our guests among; and secondly, because just that little taste of being participants in the wedding—by the roses, if not by the cake—must have made a joyous day wherever those flowers went. Extravagance is a purely relative term. There is high authority, you know, for condemning the grudging spirit over a certain alabaster box of precious ointment, "which might have been sold for much and given to the poor." Now, to patronize the poor raisers of flowers, now widespread over the country, is certainly as proper an object as to help the food caterers along. Most things are relative in this world, and it may be less extravagant for a millionaire to spend five thousand dollars on one orchid than it is for Stokes Newington to order a plate of ice cream. All the luxuries of life, in their preparation, furnish employment to somebody, and it is entirely an individual accountability how much money is spent in keeping good trades going and artisans flourishing. To overfeed people who do not need food is much more of an extravagance, but even that keeps the enterprising dealers in choice provisions alive and thriving. One might as well say that it is criminal to put wood carvings up as the wainscot of a room

TABLE DECORATION

because paper, plaster or paint will do as well. That we have artist-artisans in West Philadelphia who can follow out even the elaborate teak-wood carvings of India, in this rich wood, is certainly matter of pride, but if nobody was sufficiently proud of his library to wish to stall his books in these exquisite surroundings such artists would not make their bread by their skill.

While the *Household* puts as the highest individual quality of all, that sort of integrity which always makes its home within its means, and is never ashamed of whitewashed walls and rag carpets, but very proud of them and happy in them when they mean independence of debt, it is folly to insist that people with large incomes, beyond their needs, shall give all this away as alms. It is far better to give most of it in orders for work; in employment to all the trades and occupations that ingenuity can devise. And so let the flower grower and seller rest assured that the Court is with them.—*Philadelphia Public Ledger*.

Table Decoration.

The accompanying illustration shows a table decoration recently arranged by Florists A. M. & J. B. Murdoch, of Pittsburgh, regarding which they write:

"This royal luncheon in purple and pure gold was given by Mrs. Robert Pitcairn,

wife of the vice-president of the Westinghouse Air Brake Co. Mr. Pitcairn is also prominent in railroad circles. A few such orders would soon rob Lent of its accented dullness.

"The design is a wheel of violets nine feet in diameter placed on a King Arthur's table; the cloth was of violet satin overlaid with white gauze edged with lace. Eight thousand violets were used.

"All the details of the table were carried out in the same color; little baskets of violets in which were hidden purple confections were at each plate.

"Raised a little above the hub of the wheel on wire supports was a Jack Horner pie containing the favors. To these were attached ribbons leading to each plate. This at first somewhat concealed the beauty of the wheel, but 'when the pie was opened' and the ribbons removed it showed to good advantage surrounded as it was by a service of pure gold said to be one of the costliest in the country.

"Purple tapers surmounted by shades of the same tint shed their soft light from golden candelabra upon a table which for beauty and richness could not have been surpassed.

"Among the parlor decorations were seen some fine specimens of *Dendrobium thyrsiflorum* and *D. densiflorum*, the pride of Thomas Fitzgerald, Mrs. Pitcairn's gardener."

Philadelphia.

EXHIBITION ECHOES.

There are two distinct classes in which roses are exhibited, one for the dealer who has the right and privilege of buying his flowers where he pleases, the other for the grower who is in *honor* bound to exhibit nothing but what he has himself grown. It has come to light that some roses have been purchased by growers and have been exhibited in the growers' class. This is disreputable and the management of these exhibitions should see to it that if it is not stopped the unscrupulous grower must not only be disqualified but publicly exposed.

Mr. Chas. P. Lambis wearing a supreme smile these times since Mr. John Burton carried off so many first premiums for cut roses at the recent show. The Hon. John is to be congratulated that he has the services of so worthy a manager as Mr. Lamb during his absence attending to his public duties at Harrisburg.

A mistake was made in reporting the weather in connection with the spring show. It rained in torrents on Friday—afternoon and evening—the last day.

E. L.

YOU WILL benefit the FLORIST by mentioning it every time you write one of our advertisers.

New York.

Mr. Parsons, Superintendent of Parks, says there will be new attractions in the shape of flower beds in all the parks next summer. It is about time Mr. Parsons. Of all the principal cities of the world New York is the poorest in floral decoration of its parks. It is true we have a beautiful park in Central Park, abundant as it does in lovely bits of natural scenery its equal may not be found in any city of the Union, but it is only a natural park. New York is surrounded with similar scenery and the mechanic and the shop girl find but little relief in studying turf and tree. It was recently proposed to spend a very large sum in widening the bridge road to facilitate society's fads, the muddy paths and monotonous grass was good enough for the poor. Men are appointed park commissioners who know nothing whatever of horticulture, and the florists here have shown a marked indifference to the matter. What is wanted—what we must eventually have—is flowers, flowers to gladden the soul of the weary, flowers to smile with the light of the sky. We may have a fine collection of flowering shrubs, but many of them are dead or dying. The herbaceous plants are very poor. There are no specimen conifers or rhododendrons or azaleas, no herbaceous borders with here and there a clump of *Yucca Filamentosa* and iris. There are plenty of rocks where *Sedum* acre could spread its golden mantle in early spring, or which could be covered with our own *Lysimachia Nummularia* or *Aubretia* purpurea, or the thousands of beautiful Alpines. There are cosy nooks where the most delicate of flowers could be enticed to bloom; there are lakes and ponds where aquatics would be in their glory. The plots each side and along the mall could be and should be made a picture of loveliness. There is every facility in Central Park to make it one of the finest and most interesting in the world. The New York Florists' Club, I am glad to be able to say, will take the matter in hand and bring pressure to bear in the right quarter.

JOHN YOUNG.

Chicago.

The Easter trade was very satisfactory. Florists report an increase in the total volume of sales of from 25 to 100% over last year, and the average increase is certainly not less than 40%. The bulk of the sales were of loose flowers and blooming plants. Of those who do not handle plants sales are reported to be from 75 to 95% loose flowers, but little made up work being called for. Retail prices ruled about 10% lower than last year, but immense quantities of flowers were sold and taken all together it was the most satisfactory Easter we have ever had. Every one sold out clean and could have sold more if it had been obtainable late in the day. There was a shortage of Jack-roses—many more could have been sold; the same may be said of white carnations. Violets sold well at 50 cents a bunch. Candelums were poor but Harrisii were fine. Tulips were the only noticeably slow stock. There was but a limited call for them and the supply was with difficulty worked off.

Florist Tom Rogers was struck by a State street grip car while driving recently and sustained a bad bruise on his head and a compound fracture of the right leg.

An office boy at Vaughan's seed store stole the cash box one night recently and fled the city. He was caught the next

day in Missouri and all but about \$75 recovered.

Among recent visitors to the city were Paul Berkwitz, of H. Bayersdorfer & Co., Philadelphia, and Chas. Dannacher, of Haverport, Iowa.

Secretary W. J. Stewart, of Boston, paid the city a flying visit just before Easter.

Samuel Pearce has a sport from the Bennett that resembles that rose in every way except that it is a climber.

The schedule of premiums for the fall exhibition of the Horticultural Society has been adopted and will soon be printed and distributed. A total of \$2,000 is offered and there will undoubtedly be a lively competition in some of the classes. There will be two competitions in cut flowers of roses and carnations, one on the first day and a repetition on the third day of the exhibition, thus keeping up the display in these classes to the end of the show. While chrysanthemums will still be one of the leading features it is intended to give greater prominence to other flowers than heretofore, so that it will be a general late fall exhibition rather than purely a chrysanthemum show.

Nothing new regarding the Hort. Dept. of the World's Fair. Director-General Davis is in Florida and nothing will be done until his return.

Boston.

When the figures are all in it will be found that the Easter trade for 1894 will compare favorably with any of its predecessors. The weather could not have been improved had it been made to order, and the weather is quite an item at such a time, not only to the grower who looks for its assistance in hastening or retarding his crops, but to the dealer who fears most of all the disastrous possibility of a stormy Easter Saturday, and knows from experience the inspiring effect of a bright sunny spring day upon the transient "shoppers" upon whose patronage so much of Easter success depends.

The flower stores were simply packed with buyers all day long and far into the night, and the loaded delivery wagons constantly departing bore ample testimony to the liberality with which the customers were spending their money. The demand for violets was unprecedented and it seemed as though there was no limit to the number that could be disposed of.

The sale of lilies, principally Harrisii and longiflorum, surpassed all previous records. This is true of both cut blooms and plants. There seems to be a decided reaction in favor of the longiflorum as compared with Harrisii. Customers are beginning to know the difference between these two, and they are learning that the Harrisii, although much larger and whiter, is no equal for its rival in keeping qualities and in general tidiness as a pot plant. One or two of the larger dealers found their store space too small and hired extra accommodations when available. There had been considerable speculation in advance as to the result on the market of the increased supply of lilies. It was plain to see that the number of Harrisii in readiness for Easter was very much greater than ever before, and all reports from other parts of the country bore a suggestive similarity, and predictions of a disastrous collapse in the lily trade were freely made.

Early in the week there were a good many frightened ones, but by Friday

night it became apparent that the scare was groundless, and instead of a glut there was in many quarters a positive scarcity, and no doubt a good many more lilies might have been sold could they have been obtained at the last moment. One of the large growers, finding the dealers unwilling to take chances by buying or engaging his stock in advance, and being himself disinclined to take the responsibility of holding the same till the last minute at his own risk for their accommodation, decided to "take the bull by the horns," and straightway secured a vacant store in an eligible location for Easter week. Advertisements of Easter plants at wholesale prices did the work only too well. The stock melted away like magic and would have been easily cleaned out had it been twice or three times as big.

The general quality of flowers in the market was remarkably good. This was no doubt owing largely to the early date and the steady cool weather. Violets and pansies were excellent, so were carnations. Of stocks, spruce, heath, lily of the valley, hyacinths, etc., there was an abundance. Roses averaged well in quality and there was a fair supply of all the leading varieties, with the exception of Bon Silences. Prices were somewhat lower than in previous years. Very little design work appears to have been done.

In addition to the supply of lilies of various kinds the market was well furnished with seasonable plants, such as azaleas, genistas, spiraea, tulips and hyacinths in pans, primulas, cyclamens and the like.

W. J. S.

OBITUARY.

In the death of Mr. Allen Lloyd of Indianapolis, there has passed from our midst one who was in all probability the oldest living representative of floriculture in this part of the country.

Born in the state of New York in 1808, he settled in Lafayette Ind. soon after his marriage, and being a great lover of both floriculture and horticulture, nearly fifty years ago he gave up his entire time to its pursuit, following it almost uninterruptedly until his death, March 10.

He was one of the first to see the advantages of, and to advocate holding a state fair, and after it was an established fact, was one of the first to exhibit flowers, fruits and vegetables, his exhibits being not only a credit to him as a grower, but going far to create a taste in others, in those early days when so little was known of them in a sparsely settled and comparatively new country.

Since its inception, he has been very much interested in the state chrysanthemum show, and though for the past few years he has been in feeble health, his interest never flagged.

While living at Lafayette, on the place now occupied by Mr. F. Dörner, he often shipped plants to both Indianapolis and Chicago, and was doubtless the first outside grower to appear in either of these now great markets.

A kind husband and father, a good neighbor, a genial gentleman, he will be greatly missed, not only by his companion who survives him, but by all who have had the pleasure of his acquaintance.

H.

Mr. H. E. CHITTY is contributing a very interesting series of articles on orchids to the *Paterson N. J. Call*.

WHEN WRITING advertisers please say that you saw the adv. in the AMERICAN FLORIST.

BALL DECORATION

News Notes.

PHILADELPHIA.—Louis C. Baumann, a well known florist of Germantown, died March 20, aged 65 years. A wife and daughter survive him.

ST. LOUIS.—S. Kehrman Jr. secretary of the Ellcard Floral Co. is confined to his bed, the result of an accident while on his way home on a cable train, but he expects to be able to attend to business in a week or ten days.

DETROIT.—Fire in the Detroit Opera House March 18 resulted in damage by smoke and water to the amount of several hundred dollars on the stock in the store of Mr. S. Taplin, whose place of business is at the right of the foyer.

OAKDALE, L. I.—The conservatories on the estate of Wm. K. Vanderbilt were destroyed by fire the morning of March 21. Many rare plants were ruined and several unique specimens were lost. The fire originated from a defective flue. The loss is estimated at about \$75,000.

JERSEY CITY, N. J.—Patrick H. Nugent, the florist, died March 19, of pneumonia. Mr. Nugent was born in Ireland and came to this country when a young man. In 1861 he was employed by Andrew Reid and learned the business with him. Mr. Nugent leaves a wife, daughter and three sons.

NEW ORLEANS.—The New Orleans Horticultural Society will hold a chrysanthemum show next November. An advance list of premiums to be offered has been issued. The premiums foot up to \$252. Copies of the list may be had on application to the secretary, Mr. Chas. Wise, Third and Prytanee streets.

HARTFORD, CONN.—The exhibition of spring flowering bulbs held by the Hartford County Hort. Society March 24 and

25 was a decided success. There was a splendid display, one of the best ever made here. The leading prize takers were A. N. Pierson of Cromwell, Captain J. W. Crane, John Coombs, J. H. Bardain, Stephen Delbar, all of this city, and B. E. Beemer of Wethersfield.

JAMAICA, N. Y.—The Linnaean Club of Jamaica is an association that has just "been organized for the diffusion of botanical knowledge, the encouragement of practical floriculture and the preservation and cultivation of our native plants, shrubs and trees. In addition to lectures and publications adapted to adults, it is proposed to furnish instruction for children in the rudiments of botany and the best methods of cultivating flowers and fruits, and to have semi-annual flower-shows at which prizes shall be given." Miss M. L. McCormick is president and all the other officers also are ladies.

"The Catalogue Tax" in Canada.

I would say to J. E. K. page 542, that the origin and history of this tax are well known here among the trade, and I don't think some of our "mail" men object very much to it. You see the flood of "States" catalogues is stopped immediately they enter Canada, and the persons to whom they are addressed are notified and asked to pay the duties; many of them pay not knowing beforehand what they are paying for, and when they receive the catalogue they are thoroughly disgusted and won't then order from that catalogue at any price. But our wide-awake mail men not only send their catalogues to Canada but also pay the duties on them. The recipients get a beautifully gotten up and interesting catalogue with all expenses prepaid; this at once makes a good impression and inspires confidence. W. F.

Add to the directory list Fred C. Smith, Ashland, Wis., as F.

Ball Decoration.

The decoration illustrated was for a dance at the Hotel St. George, Brooklyn, N. Y., and was arranged by Phillips. The flowering plants used were azaleas, genistas and daisies. The large palms concealed canary birds which sang beautifully and added much to the interest of the occasion. The festoons were of ivy, smilax and roses. The large square window was dressed with palms and genistas.

Society of American Florists.

COMMITTEE ON NOMENCLATURE, EPL.

WILLIAM FALCONER, Glen Cove, N. Y., Chairman.

SUB-COMMITTEE ON ROSES:

 No reduction made for large space.

The Advertising Department of the AMERICAN FLORIST is for Florists, Seedsmen, and dealers in wares pertaining to those lines ONLY. Please to remember it.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Monday to secure insertion in the issue for the following Thursday.

Address THE AMERICAN FLORIST CO., Chicago.

WE ARE STILL GROWING.

This issue completes 652 pages of Volume 6, which is 20 pages more than the whole number of pages in Volume 5. And there are 18 numbers yet to come in the present volume. These will add at least 400 pages, making a total for Volume 6 of over 1,000 pages. Quite a book for one dollar.

Admirers of the FLORIST will no doubt be interested in the following illustration of its steady growth:

Volume 1,	438 pages.
Volume 2,	532 pages.
Volume 3,	586 pages.
Volume 4,	610 pages.
Volume 5,	632 pages.
Volume 6,	1,080 pages.

As will be noted the current volume shows an increase of more than 600 pages over Volume 1.

NEW YORK is going to have a Botanical Garden in one of its new parks, and it is going to be gotten up on such a magnificent scale that it will rival the Botanic Garden at Kew, England, the most important botanical garden in the world. Good. We want such a garden and there is no reason on earth why we should not have it. And it is mooted that the assistant director of the Kew gardens may be proffered the directorship of the New York garden. Can it be true that in this progressive and prosperous country with a population of seventy millions of people no one can be found able enough and willing to fill such a position? So far as ability is concerned we have abundant material in this country without importing it from England. Give us American citizens whose hearts and interests are American for American institutions.

UNDER the heading "Not so criminal" we print in another column some comments on the use of flowers, which recently appeared in the Philadelphia Public Ledger, and regarding which a correspondent sending us a copy says: "This deserves more than a passing notice. Let it be read over and over again; and when one is told of the fearful waste of money, and 'what a sin it is to spend so much for things that only last a day,' have this article handy."

ARRANGEMENTS for the sixteenth annual meeting of the American Nurserymen's Association at Minneapolis, Minn., the first Wednesday in June, are being rapidly completed. President S. M. Emery, a Minnesota man, is stirring up the twin cities of the northwest and the association will undoubtedly be well entertained on the occasion of their visit. The governor of Minnesota and the mayor of Minneapolis will formally welcome the association.

WE HAVE received from Messrs. C. B. Whitnall & Co., Milwaukee, Wis., a copy of a pamphlet recently issued by them and entitled "Floral Art." It is filled with illustrations of floral arrangements and contains some very pertinent comments on the use and abuse of flowers. It is, we judge, intended for free distribution to their customers and those likely to become customers and will undoubtedly prove a very effective advertisement.

WE HAVE received a copy of the first number of the *Southern Floral Magazine* to be published monthly at Clarksville, Tenn., by Morton & Titus. The subscription price is 50 cents a year. It is neatly gotten up, and as Mr. Morton is undoubtedly thoroughly familiar with the needs of southern amateurs he will certainly make it very useful to them. We should imagine that there would be an excellent field for such a periodical.

W. T.—Don't recollect the number and as present volume not yet indexed it would take considerable time to look up. If specially interested send to Prof. Wm. Trelease, Missouri Botanical Garden, St. Louis, Mo., for the pamphlet in which rules and regulations are given. This would be preferable to our synopsis.

A CALL reaches us for Schoenbrunn violet plants. Any one having these would do well to advertise them.

IN THIS ISSUE we continue our series of orchid plates. There are others yet to come.

Catalogues Received.

Harry Chapel, Williamsport, Pa., plants and seeds; Astoria Nurseries, Astoria, N. Y., seeds, plants and bulbs; Orcutt Seed and Plant Co., San Diego, Cal., seeds and plants; J. J. H. Gregory, Marblehead, Mass., seeds; Ellwanger & Barry, Rochester, N. Y., roses; W. W. Barnard & Co., Chicago, florists' seeds and supplies; A. M. C. Jongkindt Coninck, Dedemsvaart, Netherlands, hardy plants and trees; John Hartje, Indianapolis, Ind., chrysanthemums; John Henderson Co., Flushing, L. I., roses; Van Zanten & Nieuwerf, Beverwijk, Holland, Dutch flower roots.

Sensible and Pleasing.

Commenting upon the flower show to be given by the New York Florists' Club assisted by an influential list of patronesses, in aid of a New York hospital, the New York *Town Topics* says: "It is a much more pleasing and sensible idea than the perpetual theatricals, which are used to obtain funds for charities."

Cyclamens.

There is nothing like a visit to a trade cyclamen grower's to enable tyros to pick up practical information, as any good gardener can take in at a glance what are the essentials to success. It is one of the oddities of cyclamen culture, that rarely are better plants produced than are those which go into the London markets, and of these none again perhaps are better than are produced on the west side of the metropolis. That such should be the case is all the more remarkable, because the plants are usually at their best during the dead of winter in these trade-growing establishments. Although a fog-ridden locality, where of late it has been found needful to retard somewhat until the chrysanthemums have become exhausted. Cyclamen production in West

Middlesex has somewhat changed hands of late, some old growers having fallen out and others have taken their place. One of the oldest and best still is Mr. Warren, of Isleworth, and one of the newer and best is Mr. May of the same locality. Each has a number of long low span houses erected for cyclamen culture at St. Margaret's. Probably there is little difference in methods of culture in both cases, but there is some in strain. Mr. May has certainly bred a remarkably fine dwarf giganteum strain, those of the pure white and persicum types being wonderfully fine and compact. The old legginess of the giganteum forms has been eliminated, the stems are not less stout, or the blooms less fine, but the relative height of foliage and bloom is far more evenly balanced, and indeed the plants so far as habit, robustness and size of blooms are concerned, seem to be perfection. Thus looking over Mr. May's or indeed other cyclamen houses, one is struck with the fact that the plants are very easily grown to such perfection. The houses are generally span in form, rather low, so that just head room is obtained and no more. There is the maximum of light, with a minimum of wasted plant space, and as the stages are not more than 3½ feet wide, the whole are easily commanded from the center alleys. The stages are of broad trellis or open wood work; warmth from the pipes below is thus more readily passed to the plants above, more air is accessible and not least, when fumigation is needful, and fly will visit even the cleanest and best cultured stock; the smoke can pass up under the leaves with greater facility than in the case when the stages are close boarded. Greenfly is perhaps the most troublesome pest of the cyclamen grower, and therefore he wisely fumigates the plants before there are numerous evidences of the pest abounding. It is easier to prevent than to cure when the pest has got good foothold. The houses are heated relatively; one or two have double the heating power others have. The cooler houses serve to keep the plants slowly growing, the warmer ones serve to fetch up a batch into bloom rapidly when specially required. Did not our trade grower possess such facility he would often be in an awkward fix with respect to the supplying important offers. Only in the case of old corns left on hand the previous year do we find many in pots, beyond the customary 48's. All the earlier of the yearling production of some 6,000 are in these 48's and the earlier are in full bloom, while myriads of others are coming on in various stages of growth to keep up the demand which concludes about the end of April. Mr. May finds it needful to secure his loam from Banstead Downs, so that it is evident West Middlesex gives soil which has unsuitable properties. He sows his seed in pans during the months of August and September, pricks off the seedlings when strong enough to handle into 5-inch pots, about the middle of January, in light and not at all damp soil. Keep them in these until good growth has been made, then shift singly into 60-pots and later into 48's, in which they bloom with wonderful profusion. When some ten to twelve blooms are open the plants go to market, usually selling at good prices. In private gardens where, however, cyclamens are rarely done well, the blooms are valuable for pulling and they endure well. To gardeners, therefore, at this winter season a good batch of cyclamens in fine clean bloom is invaluable.—A. D., in *Gardeners' Chronicle*.

Re Seed Trade.

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president; JOHN FOTTLER, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1891.

Customs Regulations.

At the close of a communication with the caption agricultural seeds in the Easter number of the *FLORIST* the editor states "that the present tariff law" "is subject to the individual interpretation of each custom officer in America in applying the law," which with due deference to the editor's better experience, I do not think is in accordance with the facts.

The chief officer of customs is undoubtedly the one who enforces the law, but the class and rate of duty is ascertained and reported to him by the appraiser and his decision is in turn subject to review by the Board of General Appraisers. That board is guided in its decisions by the statutes as to law, and by the evidence of reputable merchants, as to facts.

The following decision will perhaps illustrate the method, and show that the collector of customs is not an irresponsible autocrat in the imposition of duties on imports.

R. C.
DECISIONS OF THE BOARD OF GENERAL APPRAISERS.

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY.

WASHINGTON, D. C., Feb. 6, 1891.

To Collectors and other Officers of the Customs.—The following decision of the Board of General Appraisers at New York as to the classification of imported goods are published for your information and guidance under the provisions of section 18 of the act of June 10, 1890.

O. L. SPAULDING.

(G. A. 273.)

PLANTS, FREE AND DUTIABLE—RHODODENDRONS, ROSE PLANTS AND CLEMATIS.

Before the U. S. General Appraisers at New York, January 26, 1891.

In the matter of the protests, 2851 A and 2852 A, of Chase Brothers' Company, against the decision of the collector of customs at Rochester, N. Y., as to the rate and amount of duties chargeable on certain live plants, imported per *Odium* and *Persian Monarch*, December 13 and 15, 1890.

Opinion by Sharretts, General Appraiser.

The grounds of objection presented in these protests which relate to the constitutionality of the act of October 1, 1890, having been fully discussed and ruled upon by the board in G. A. 242, will not be considered by us in the present case.

With regard to the claim of the appellants that five cases of rhododendrons, imported per *Persian Monarch*, December 15, 1890, should have been admitted free of duty under paragraph 666, it appears that the collector assessed duty thereon at 20 per cent. ad valorem, under paragraph 282, for the reason that the importers are in the nursery business and do not use any plants under glass. We are of the opinion that the importers' intention is not material, if the plants are of the kind specified in paragraph 666, and are chiefly used for forcing under glass for cut flowers or decorative purposes.

The *Encyclopædia Britannica*, referring to rhododendrons, states that no adequate distinction can be drawn between this genus and azaleas; we find also, as matter of fact, that they are of a kind chiefly grown under glass. The claim of the appellants relative thereto is therefore sustained.

Concerning the rose plants and clematis

in question, which were also returned for duty at 20 per cent. ad valorem, under paragraph 282, we find, from the evidence before us, that they belong to a class of plants which are chiefly used and generally known as nursery stock and are rarely grown under glass. The assessment of duty upon them is accordingly affirmed.

[Our correspondent R. C. is correct to this extent that all importers have a right to protest, (but few however have the time and disposition to make and follow such claims) but it is a fact well known to many of our large importers that the Secretary of the Treasury has in many of his decisions leaned toward the support of the local appraiser. The case mentioned in this paper some time since in which the local appraiser saw fit to claim a canna root to be a bulb is an example. This case was appealed and the Secretary of the Treasury sustained the decision of the appraiser (that it was a bulb) notwithstanding the Superintendent of the Botanical Garden at Washington furnished the importer a written note that in his judgment the canna was a plant. Such decisions as this prove that the secretary of the treasury has been in the habit of bolstering up the decision of the local appraiser, rather than seeking for facts in the case.]

Now that all appeals go to the Board of General Appraisers at New York, we may hope for better things, but look at the last clause in above decision of January 26 in which it is stated concerning rose plants "they belong to a class of plants which are chiefly used and generally known as nursery stock and little grown under glass." The assessing of duty upon them is accordingly affirmed." Now while we are not in a position to give a copy of the invoice referred to, may we not fairly assume that although some of the roses in question were suitable and might be used for growing under glass, the determination was to assess 20% duty on the whole invoice. Asimilar case to this has just occurred in this city. The appraiser holding that because a certain lot of H. P. roses were received in the spring, therefore they were for planting out of doors and were assessable at 20% whereas the same stock in December was passed by him free, because as he says they might then be used for forcing under glass. The absurdity of such a position throws ridicule upon the whole system. Of course the duty was paid under protest and when the decision of the general board at New York is made on the case it will be reported in these columns.

It would be well indeed if as R. C. says, the Board was "guided by the evidence of reputable merchants as to facts." We have ample proof that the Secretary of the Treasury was not; if the Board is, we have yet to learn it.—Ed.]

The Bulb Dealer's Talk on Shipments.

Occasionally a bone of contention, or perhaps a bone of misunderstanding, occurs between the florist and shipper of bulbs when an order includes bulbs that mature at different times. For instance, if X, Y, Z & Co. receive an order from Mr. Smith, florist, for, say freesias, which are ready in June, Roman hyacinths and other French bulbs which are ready in August, Dutch hyacinths, tulips and other Holland bulbs that are ready in September, and lily of the valley, spirea, etc., who are ready in November, in absence of instructions when are they to ship? If X, Y, Z & Co. make various shipments of these bulbs at the time they arrive,

Mr. Smith complains and probably makes a claim for extra expenses incurred by making so many shipments. On the other hand if X, Y, Z & Co. should hold Mr. Smith's order until September when it could all be filled with the exception of the lily of the valley and spirea, so as to save Mr. Smith the expense of receiving so many consignments, ten chances to one X, Y, Z & Co. would be hauled over the coals for keeping the early bulbs back. Now which is at fault in this matter—X, Y, Z & Co. or Mr. Smith? The bulb dealer thinks the party who orders is. Why? Because the dealer states in his list the different times at which the various bulbs are ready for shipment and in the absence of instructions from Mr. Smith he uses his best judgment in which several things have to be taken into consideration.

The first is the distance which the bulbs have to be sent; the second is the proportionate quantities of early and late maturing bulbs ordered. For instance, if John Brown, florist, several hundred miles away, should order \$20 worth of August bulbs and \$100 worth of September bulbs it is fair for the dealer to suppose the August bulbs are of minor importance to Mr. Brown, and considering the distance the bulbs are to be shipped, he probably holds them to forward with the September lot. Mr. Brown very likely writes X, Y, Z & Co. something like this: "My neighboring florist, Mr. Jenkins, bought his bulbs from A, B, C & Co. and received and planted them three weeks ago. I placed our order with you expecting that you could ship as early as any other dealer, but am exceedingly disappointed. My flowers will now come in three weeks later than Mr. Jenkins', and consequently I shall lose a thousand dollars." and the letter probably ends with a big claim for damages. X, Y, Z & Co. investigate the matter and find that Mr. Jenkins' order to A, B, C & Co. was only for August or early maturing bulbs, which of course would naturally be shipped on their arrival from France, or if Mr. Jenkins' order was of a general nature he was smart enough to give instructions when to make the different shipments.

NOW THE BULB DEALERS REQUEST that as the time for booking orders is approaching, that florists bear in mind in making out their orders the time when the various bulbs will be ready for shipment, and give their instructions when they wish their bulbs forwarded. This will then relieve us poor bulb dealers from the odium of having been neglectful in regard to shipments, when in reality we have been studying the interests of the florists.

BULB DEALERS.

[Bulb dealers have struck a key note. There have been many misunderstandings; surely some, if not all, may be avoided by reasonable attention, and oil poured on troubled waters if instructions are carefully made when ordering. We expect further suggestions.—Ed.]

Seed Warranty.

Ten times out of twelve failures are caused by too much or too little moisture, too deep sowing, protracted cold and often with rain, insects adapted to every species of vegetable growth. I asked one man how he had sown his flower seeds, which failed to come up. "Oh, two inches deep, same as the peas and beans," he replied. If our injured friends would lay the failure ten times in twelve to these causes and the other two times to us they would come about right. For these rea-

sons it is readily seen that a seedsman can not warrant his seed to grow, however well assured he is himself of its vitality, and on this account we are obliged to distinctly disclaim any responsibility. If the purchaser could warrant to us a knowledge of the proper treatment of his purchase, and venter suitable for germination, and also, freedom from depredations by insects and birds, then it would be right to warrant them to grow and produce a crop.

This is the unpleasant feature of the business—when a customer honestly believes you have imposed on him when you are quite certain of the contrary.—*James King, in Produce Trade Reporter.*

Mr. F. HOWCROFT of Howcroft & Watkins, London, will visit America in April.

Floral arrangements have for been even less conventional in form than ever before. Loose flowers at funerals, and long stemmed roses, orchids and occasionally great clusters of tulips, narcissus and jonquils interspersed with plenty of maiden hair ferns and backed by palms at receptions and dinners seem to be the rule. At funerals the casket is almost filled with flowers, most frequently lily of the valley, and when closed the cover is often strewn with the same flower.

An inexpensive but very effective basket of cut flowers was the centerpiece in the window of one of our leading florists. It was a round green straw basket four inches in depth and about three feet in circumference and attached to it a long handle. In one side was a short stemmed cluster of six Harrisii lilies, next a cluster of bright red and then one of bright yellow tulips, just above yet in the midst of these was a single stalk of purple hyacinths and uppermost a cluster of a dozen or more jonquils, the whole interspersed with sprays of asparagus. Attached to the handle near the top was a bow of delicate pink satin ribbon four inches wide with two long pendent streamers.

Ed. Schmid has removed to 712 Twelfth street, a few blocks north of his old location. He has a splendidly appointed store at the new place.

It is understood that the "White La France" will make its debut next season.

Providence.

The Rhode Island Horticultural Society has voted to hold a chrysanthemum exhibition in November and will spare no pains or expense to make it the leading exhibition in the New England States. The exhibition given by the society last fall was a revelation to many of the visitors and has created a greater desire than ever before for exhibitions of the wonderful flower.

The society has just held a very successful exhibition of spring flowering plants, and will hold a rose and strawberry exhibition in June.

This old society seems to be roused from the lethargy into which it had fallen and is striving to take a front rank in the long line of horticultural societies in this country. C. W. SMITH, Sec'y.

Minneapolis.

At the last meeting of the Florist Club it was decided to hold a chrysanthemum show November 10 to 13 inclusive. A committee consisting of Wyman Elliot, S. Y. Haines and E. Nagel was appointed to have full charge of the exhibition. They propose to have out a premium list at an early date.

Whether the state society will hold a chrysanthemum exhibition next fall is still undecided. According to previous agreement St. Paul has the right to the show this year, as Minneapolis had it last fall, and if the St. Paul florists want it Minneapolis will turn in and help. A committee was appointed by the state society to work the matter up among the St. Paul florists and report at this meeting but failed to do so. N.

An Unpleasant "Development."

A well-known young man-about-town called at a leading florist's the other morning and mentioned that he had received a bill requesting him to pay \$20 or \$30 for flowers, and stated that he had never ordered the flowers and knew nothing about them. The florist looked up the order that had been received and found that it was a letter written in a female hand, inclosing the man's card and directing that the flowers in question should be sent to the address of a young and popular married woman in society. The note had been delivered by a District Messenger boy. On seeing the order, the young man insisted that it was all a mystery to him and that he had not written the note nor inclosed his card. He said that he had met the young married woman quite recently at Delmonico's and that she had thanked him for a box of lovely flowers, but he did not know what she was talking about. He asked, of course, what he should do about it and the florist responded that if he had not ordered the flowers he could not of course be expected to pay for them. The bill was accordingly marked paid and the account was written off. Several other tradesmen have met with somewhat similar experiences and the question that has arisen is of course whether or not this is a new and ingenious device for running up trifling bills without the necessity of liquidating the indebtedness thus incurred. Nineteenth century civilization certainly shows a very quaint development.—*New York World*.

IF YOU LIKE THE AMERICAN FLORIST give it your fullest support by confining your orders to those who advertise in its columns and mention the paper when ordering.

SCHILLER & MAILANDER,

NILES CENTRE, ILLINOIS.

THE LATEST AND GRANDEST NOVELTY OUT.

NELLIE LEWIS CARNATION.

Flowers very large and full, and of a color never before seen in Carnations — AN EXQUISITE SHADE OF PINK.

W. J. PALMER & SON,

Florists of Buffalo, N. Y. say:

"I had an opportunity of seeing Nellie Lewis Carnation in full bloom on Jan. 15th, and a grand sight it was. I consider it a better and finer Pink Carnation than Grace Wilder. Though the flowers do not demand \$1.00 each as we read about of late, they will get there just the same."

For decorative purposes and corsage bouquets, they are unsurpassed. A bowl filled with them used at a dinner a short time ago, lighted up the entire table. Don't fail to place your order at once, as we control the entire stock and have only a limited number of plants.

Price, Rooted Cuttings, per 100, \$10.00.

Plants, 2-in. pots, per 100, \$12.00.

McGREGOR BROS., Springfield, O.

Mention American Florist.

Providence.

Thomas Curley on Harkness street had all of his stock ruined a few days before Christmas by the bursting of a gas main in the street. This is the second time he has suffered by the same cause. The gas company will settle.

P. McCrea on Smith street has a new rose house that he built last summer that is doing immense; the house is 275 feet long, 25 feet wide, $\frac{3}{4}$ span, double thick glass, 16x24, heated by hot water under pressure, and is much admired here by all the florists as a model house. He grows for the trade.

Johnston Bros.' flower store on Westminster street has a very large business in choice cut flowers and their window makes a very attractive display.

Henry Cairns of East Providence started a store on the principal street here, but had to give up after a month's struggle.

E. D. Clark, rose grower on Tockwotten street, has some very fine roses this season. His long stemmed Beauties are well grown.

Wm. Appleton Jr., successor to R. Hogg on Broadway, is doing very well since he started two years ago. He is ably assisted by his foreman, Robt. Johnston Jr., who has things looking well. B.

Taste in Arrangement.

During a recent correspondence with a friend on the subject of decorations, the use of foliage with flowers, masses of color, etc., the following expressions were used and as I consider them too valuable to be buried in my coat pocket I send them to the FLORIST. Here they are:

"It is true that savage and uncultivated minds ask for quantity of color in ornament and sound in music, quantity of food, etc. In short they believe that all they need in order to be happy is an abundance of those things which have given them pleasure. The child—either young or grown—being pleased by the bright colors of flowers that meet its eye at comparatively long intervals of time and dispersed over much space thinks to enhance its pleasure by getting the greatest quantity of color together. But time and much experience of dulled nerves force him at last to recognize the true laws governing the pleasurable exercise of all our senses."

I think that some of our brother florists who put 2,000 roses on a table ought to have an opportunity to read the above. C. B. W.

A Carriage Bouquet Holder.

The New York Journal gives an illustration and description of a device for holding my lady's bouquet while in her carriage on the way to balls, the theater, etc. It is like a small vase with a flaring top, of a shape to fit the handle of a large bouquet and is attached to one of the front panels of the carriage.

Violet Plants.

Will some violet grower please tell me whether violet plants bloomed one winter in cold frame will do as well another year as young plants? C.

ALWAYS mention the AMERICAN FLORIST when writing to advertisers.

DON'T FAIL to secure a few plants of that wonderful **VERBENA CLIMAXER**. Have never seen anything better, all points considered. See our January No. 3 Ready now, 6 for 6c; 12 for 12c; 25 for \$1.30. Heavy stock, perfectly healthy. By the 100 and 1,000 in March and April. See other special offers.

DAISY SNOWFLAKE

Daisy Snowflake.—This Daisy, if treated like Violets, will give splendid returns for all labor bestowed upon it. I grow it by the thousands and cannot supply the demand for them as it keeps fresh from 2 to 3 weeks after being cut, and then looks as fresh as other white flowers just cut. The flowers are borne on stout long stems, fine white and beautifully quilted, and average as large as a 50-cent piece. It is the best of all the white daisies I have ever seen.

Price, \$1 per doz. free by mail; \$5 per 100 by express

SEE WHAT F. J. KELLER SAYS ABOUT THIS DAISY:

ROCHESTER, Jan. 20th.
Daisy Snowflake is quite a useful flower both for floral designs and put in with cut flowers, and when tied up in small bunches they sell very rapidly with our customers. We are a great many in place of carnations as it is cheaper and covers almost the same space, and keeps fresh considerably longer. Be sure and send me every 2 boxes you can cut, as I cannot get them fast enough for my customers. I am in the habit of buying Daisy Snowflake because it keeps fresh for 2 to 3 weeks. I feel I cannot say too much in favor of this Daisy. F. J. KELLER.

MISSION RIDGE GREENHOUSES.

CHATTANOOGA, TENN., March 1st '91.
FRED, SCHNEIDER, DEAR SIR:—We received our Daisies yesterday, and Daisies they are! Enclosed please find our order for 1000 Daisies and 1000 plants. Please send them as soon as you can, as we want to get them to blooming well before Easter. Can you supply the cut blooms and at what price? They ship so excellently that we would like to get some for immediate use.

Very resp't MAC GOWAN & COOK

P. S.—We respect our customers; please send us its value in Cut Flowers of the Daisies with shipment.

Regarding the "Problem."

In regard to the article in the *FLORIST* of March 12, headed "A problem," I wish to state my experience with one of these combination concerns.

For several years I had been sending flowers to a firm that is doing both a retail and commission business. The returns had for some time been very unsatisfactory, so last Easter (1890) I concluded to send part of my stuff to another commission man on the same street, some two squares west of the combination concern. The following returns that I received speak for themselves: I sent each one 2,000 daisies, 2,000 alyssum and 500 mignonette. From the combination concern my returns were \$17 and from the commission man the returns were \$27. I wrote to the combination concern asking for an explanation, but am still waiting for a reply.

The only solution to the problem, at present in sight, is to let these combination concerns severely alone.

A GROWER.

A New Use For Flowers.

Under the above heading the *Pittsburg Post* prints the following:

"The fad of one fashionable woman is to wear, not silver clasps on her garters, but roses of the color of her stockings, says an exchange. A gay maiden, who is blessed with a tiny foot, wears flowers at balls, dinners and receptions on her dainty slippers. A bunch of violets on a white satin slipper, and worn with a white gown, is a charming toilet. A pale pink rose on a suede slipper, with a gray and pink gown, is another bewitching toilet worn by this inventive young woman. Lilies of the valley also go well, with their green stems showing. Of course it is best to select a small flower for this purpose, a bud, or half-blown rose, or a small bunch of violets, the latter being more easily managed and more becoming to the foot. But in any case the foot must be small."

Wood for Propagating.

Would like to ask through your paper if roses propagated from blooming wood or shoots are better for winter forcing than those propagated from blind shoots? Have not plants propagated from blind shoots a tendency to bear fewer buds and more blind wood than others? J. F. A.

[This matter has already been very thoroughly discussed and the preponderance of opinion was that there was no difference.—Ed.]

When writing to advertisers please mention the fact that you were induced to write by the advertisement in the *AMERICAN FLORIST*. You will benefit us by letting advertisers know that it is the *FLORIST* that is bringing them trade.

HOW TO
PROPAGATE:

THE NURSERY BOOK has been prepared with the utmost pains. It embodies the experiences of many experts. The author has been engaged in its preparation for many months and has visited nurseries and men for the particular purpose of acquiring knowledge upon technical points. The whole volume has been read and criticised by Professor B. M. Watson of the Bussey institution, one of the best propagators in this country. All available authorities have been consulted, and particular parts have been submitted to experts. The fruit matter has had the criticism of leading nurserymen, and the head propagator of probably the most important nursery in America has been freely consulted. The orchid matter has been prepared by W. J. Bean of the Kew Royal Gardens. The instructions in the nursery list—which gives the definite methods for each plant—have been read by at least four persons. It is written in a simple, practical style. It contains in compact form about all the knowledge there is on propagation of plants of every kind, hitherto scattered in many books or entirely unwritten. Every florist wants it. About 300 pages; numerous illustrations.

PRICE, in library style, cloth, wide margins, \$1.00. Pocket style, paper, narrow margins, 50 cents.

THE RURAL PUBLISHING CO., Times Building, New York.

SHEEP MANURE, a natural invigorator for plants and lawns. This is a plant food of great merit, prepared with a view of supplying all the elements necessary for the perfecture of plant life. **QUICK, LASTING and ECONOMICAL.**

STANDARD FLOWER POTS

—AND—

JARDINIERES IN GREAT VARIETY.

NOTE.—Although forced to play a minor part in the Prize Pantomime, we nevertheless produce the best STANDARD POT in the country, and members of the S. A. F. soon found that to get such they must send their orders to

A. H. HEWS & CO., N. CAMBRIDGE, MASS.

AHEAD OF EVERYTHING.

We Follow None, Prize or No Prize.

Our latest improvements in machinery produce a Standard Pot which for lightness, smoothness and durability, has never been equalled. Customers buying of us will

SAVE ONE-THIRD IN FREIGHT.

And to prove this, we give below a table showing number in Crate and **WEIGHT** of same, which speaks for itself:

Size.	No. in Crate.	Weight.
1 1/4-in.	3,000	250 lbs.
2	2,400	250 "
2 1/4	1,750	250 "
2 3/4	1,400	250 "
3	1,200	250 "
3 1/2	800	250 "
4	600	250 "

It will be seen at a glance, that our pots are one-third lighter than formerly, and yet we claim that owing to the superior quality of our clay and improved machinery, they are stronger than any put in the market, and we frankly ask you to make the test. **SEND FOR PRICES.**

THE CHICAGO daily papers again make the now familiar statement that Director-General Davis will organize the horticultural department of the World's Fair next week. "Quien sabe."

SOME of the leading features at the spring exhibition of the Mass. Hort. Society will be illustrated next week.

FULL REPORT of the exhibition of the New York Florists' Club in next week's issue.

WHEN WRITING advertisers please say that you saw the adv. in the AMERICAN FLORIST.

Reports from all Sections.

ORANGE, N. J.—Easter trade was far ahead of last year. The churches made some very fine displays of flowers and plants.

TERRE HAUTE, IND.—Probably 25 per cent better than last year. Never had a better supply. Retail prices same as last year. Nearly all loose flowers—very little made-up work. A very satisfactory Easter.

NASHUA, N. H.—About 30 per cent larger. Supply of home-grown flowers much larger. Retail prices about same. Increase in call for blooming plants. Plenty of flowers. More satisfactory than in previous years.

MADISON, Wis.—Somewhat larger than last year. Supply of home-grown flowers about equal to that at last Easter, but retail prices were a little higher. No change in call for blooming plants. More satisfactory than previous seasons.

PORTLAND, ME.—Larger than last year. Supply of home-grown flowers was larger, quality about the same. Retail prices were about same as last year. The increased call was entirely for loose flowers. More satisfactory than previous Easters.

PROVIDENCE, R. I.—About 25 per cent larger than last year. Supply of home-grown flowers was short but quality good. Retail prices were about 10 per cent higher than last year. Increase in call for loose flowers. The best Easter we ever had.

FT. WAYNE, IND.—Larger. Home-grown flowers first class, but not enough of them. Retail prices about same as last year. can get all we ask for good stuff. Good demand for plants. Increased call for loose flowers. Most satisfactory Easter have had.

MEMPHIS, TENN.—About 25 per cent larger than last Easter. Better supply of home-grown flowers. Some increase in call for blooming plants, especially for Harrisii lilies. Sold more loose flowers than ever before. It was more satisfactory than previous years.

NASHVILLE, TENN.—Much larger than last Easter. Supply of home-grown flow-

ers was short and quality rather poor. Retail prices 25 per cent higher than last year. Decrease in the call for blooming plants. Demand was all for loose flowers. Decidedly best Easter we have had.

QUINCY, ILL.—Easter sales double those of last year. Supply of home-grown flowers was much finer than usual on account of clear weather. Prices just the same as last year. Increase in the call for made-up work for churches. Had all the stuff we wanted. Best Easter we have had.

ATLANTA, GA.—Total sales somewhat larger, though supply of home-grown flowers was not so good as last year. Prices same as last Easter. Sales were all loose flowers. No more satisfactory than in former years. The cold spring rains have been most trying to the florists in this section.

LAWRENCE, KAN.—About 25 per cent larger than last year. Supply of home-grown flowers larger and of better quality than last Easter. Prices about equal to last year. Increased call for blooming plants. More loose flowers sold—but little made-up work. Much more satisfactory than any former Easter.

TORONTO, ONT.—About 30 per cent larger than last year. Supply of home-grown flowers larger and of better quality. Retail prices were about same as last year. Increased call for blooming plants. Sales were nearly all of loose flowers, hardly any call for made-up work. A very satisfactory Easter.

NEWPORT, R. I.—About one third larger than last year. Supply of home-grown flowers was large and of good quality. No change in retail prices from last Easter. More call for blooming plants, especially lilies. Very little made-up work was wanted—sales nearly all loose flowers in boxes. Most satisfactory Easter we have had.

NEW BEDFORD, MASS.—Much larger than ever before. Best Easter we have ever had. Supply of home-grown flowers larger than last year and of finer quality. Prices about same as last year and no change in call for blooming plants. Plenty of stock to be had at fair prices. Didn't have to buy away from home. Big call for Harrisii lilies.

GRAND RAPIDS, MICH.—About 15 per cent increase. Supply of home-grown flowers was larger than last Easter, and retail prices were lower. Increase in the call for blooming plants and for loose flowers over made-up work. Most everything was low in price and the people bought freely. Yes, most satisfactory Easter we have had.

BLOOMINGTON, ILL.—About 10 per cent increase with prices about same as last year. The supply of home-grown flowers

was better than usual, but would have been still larger and better but for the dark and rainy weather during the week before Easter. However, even with this drawback this Easter was more satisfactory than any previous one.

OTTAWA, ONT.—About 20 per cent larger than last year. Supply of home-grown flowers large and of good quality. Retail prices about the same as last year. Increased call for blooming plants. Outside of plants' sales were nearly all of loose flowers. Lost on what flowers were bought. On the whole this Easter was better than previous ones.

NEW HAVEN, CONN.—More in bulk, almost the same in money. Supply of home-grown flowers was larger and better. Retail prices a little lower. Increase in call for blooming plants. More loose flowers, less made-up work. No difficulty in getting all the flowers wanted. Compared with former seasons, buying was much closer but general volume the same.

SALT LAKE CITY, UTAH.—About 20 per cent increase over last Easter, and a better supply of home-grown flowers. Retail prices a little better than last year. Increased call for blooming plants, especially *Lilium Harrisii*. Increase in call for loose flowers as compared with made-up work. Had all the flowers we needed except roses. Much better than any previous Easter.

ROCHESTER, N. Y.—About the same as last Easter. Supply of home-grown flowers rather less than last year, but quality was better. Retail prices were a little lower on many things, but increase in call for blooming plants. Very few set pieces were ordered. With the exception of roses there was a sufficient supply of flowers. Total receipts about equalled those of last Easter.

CLEVELAND.—From 10 to 30 per cent larger than last year. Supply of home-grown flowers was larger and better. Retail prices about the same as last year. Good call for blooming plants. More call for loose flowers, but little made-up work. Carnations were scarce and high priced. Taking everything into consideration this Easter was more satisfactory than any previous one.

INDIANAPOLIS, IND.—About 10 per cent better than last year. Supply of home-grown flowers larger and better. Retail prices about same as last year. Increase in call for loose flowers and blooming plants. Got all the flowers we wanted at fair prices. *Bernuda lilies*, carnations and hyacinths sold better than last year. Violets were slow. Yes, more satisfactory than any previous Easter.

SPRINGFIELD, ILL.—One florist reports sales a little less than last year; supply of home-grown flowers not as good nor as many; retail prices and call for plants both about same as last year; demand was for loose flowers—no designs; could not buy any cut flowers that I could sell at a profit; good plants in bloom sold well; demand for cut roses and other flowers exceeded the supply.

OMAHA, NEB.—Easter trade about the same as last year. We have had more and finer flowers this year than ever before, but the prices were not so good. No noticeable change in demand for blooming plants. Sold more flowers loose this year and not so many pieces. Would have had a much better trade had the weather been fine. It rained and was generally disagreeable here.

MINNEAPOLIS, MINN.—About 30 per cent larger than last year. Retail prices about same as last Easter. The supply of home-grown flowers was larger and generally of better quality. Quite an increase in the call for blooming plants. Call was mostly for loose flowers, but little made-up work. Taking everything into consideration it was decidedly the best Easter we have ever had.

PITTSBURG, PA.—From 25 to 40 per cent larger than last year. Supply of home-grown flowers was nearly double that of last Easter and the quality was better also. Retail prices were about the same as last year except on roses which brought a little better prices. Calls were almost entirely for loose flowers to the exclusion of made-up work. The most satisfactory Easter we ever experienced.

DENVER, COLO.—Two florists report the Easter trade as from 33 to 50 per cent less than last year. The decrease was undoubtedly due to the execrable weather. Snow and hail fell on Saturday and there was a snow storm on Easter Sunday. The supply of home-grown flowers probably equalled that of last Easter, though short on roses. Retail prices were about the same as last year. What call we had was nearly all for loose flowers.

UTICA, N. Y.—About 20 per cent increase over last Easter. Retail prices about same as last year. Increase in call for choice blooming plants. Also increase for loose flowers—made-up work falling off. Supply of home-grown flowers was good. More satisfactory than previous seasons. Buyers are getting much in the bad habit of leaving their orders for Easter stuff to the last day, and the last stragglers are often greatly disappointed—as they deserve to be.

LONDON, ONT.—Sales were larger than last year. The supply of home-grown flowers was also larger and of superior quality. Retail prices about the same as last Easter, or a trifle better. No change in call for blooming plants. All loose flowers—no made-up work. Owing to the earliness of Easter and the bad weather up to the day before, it was almost impossible for us to take out plants. Saturday being fine let us out of the hole to a certain extent.

NEW ORLEANS.—Easter trade about one-third larger than last year. Supply of flowers was very large. Loose flowers are coming more and more into use. Very few blooming plants except bedding stuff. Palms and ferns were used for decorations. Very much more satisfactory than previous seasons because we had an abundance of flowers. Whenever out door flowers are scarce here sales are small as few buyers will pay more than usual rates.

CINCINNATI.—About 20 per cent less than last Easter. Five days of rain cut sales badly. Supply of home-grown flowers was about equal to last year but prices were not as good. In blooming plants lilies and choice stock were more called for. What trade we had came in a rush on Saturday as it was the only dry day in the week. Plenty of flowers were to be had at fair prices. Would have been a good Easter for us if we had been blessed with good weather.

MONTREAL, CAN.—From 30 to 35% larger than last Easter. The supply of home-grown flowers was good, almost meeting the demand. Retail prices about same as last Easter. There was a decided

increase in the calls for loose flowers. Bulbous rooted stuff was rather too plentiful this season, but it has been good except in the case of Dutch hyacinths which have not been up to the average. Taking everything into consideration the Easter trade of 1891 was the best we have had.

BALTIMORE.—A small increase over last Easter. Better quantity and quality of home-grown flowers. Retail prices were considerably lower than last Easter. A great increase in the call for blooming plants. The weather on Friday and Saturday was indescribably bad, weather that the ladies would not venture out in, and retail sales were very small until Saturday night. No more satisfactory than previous seasons, though probably would have been had we had pleasant weather.

PHILADELPHIA.—About 15 per cent larger than last Easter. Increase would have been larger but for the unfavorable weather. Supply of home-grown flowers was very large. Retail prices were same as last Easter except on lilies, which were sold at prices about 30 per cent lower. Increase in call for blooming plants. Most stock was in full supply and to be had at fair prices. Even with the unfavorable weather it was a more satisfactory Easter than previous ones and had pleasant weather prevailed it would have been much more so.

LEAVENWORTH, KAN.—About 20 per cent larger than last Easter. Home-grown flowers were about the same in quantity but of better quality. Prices were generally lower except on lilies. Increased call for blooming plants. More calls for loose flowers and less for made-up work. We can not buy elsewhere and make a profit. The churches seemed to decorate more than usual in the past. Most of the churches here were decorated principally with palms and blooming plants. Taken altogether it was most satisfactory Easter we have had.

DETROIT, MICH.—From 30 to 50 per cent larger than last year. Supply of home-grown flowers compared favorably with that of last Easter. Retail prices ruled about the same as last year. Large increase in the call for blooming plants. One florist reports that such plants as fine roses, rhododendrons, azaleas, hydrangeas and geranias were more in demand than last year. There was plenty of stock on lack of anything. Quite an increase in call for roses and violets. The universal verdict is that it was decidedly the best Easter we have ever had.

RACINE, WIS.—Easter sales considerable more than last year, probably about 20 per cent. Supply of home-grown flowers was larger and quality better than last year with prices a little lower, especially on callas. Large increase in the call for *Harrisii* lilies in pots. Cut flower sales in about same proportions as last year, but little call for made-up work. As satisfactory as any other Easter. Sales of pot plants would have been considerable more if good stock outside of lilies had not been short, the open season having brought other bulbous stuff in too early.

ALBANY, N. Y.—Total sales larger, especially on plants. Increase probably about 10 per cent. Of the supply of home-grown flowers there was not quite so many roses, but twice the usual quantity of violets, carnations and bulbous stuff. Prices were about the same as last year. Increase in call for blooming plants. All the cut flowers were sold loose. The

VARIOUS ORCHIDS.

1. *Calanthe vestita*.2. *Calanthe Regnierii*.3. *Warrea Lidenianna*.

supply of roses was rather short. Among plants azaleas were more in demand than hydrangeas. A great demand for plants averaging in price from 75 cents to \$1. More satisfactory than any previous Easter.

LOUISVILLE, KY.—Much larger than last year, one florist reports his sales to be about double those of last Easter. Supply of home-grown flowers was short, and as many as to be had here as last year. Retail prices were higher, roses selling at from \$2 to \$5 a dozen. A big increase in the call for blooming plants of lilies, hyacinths and geraniums. Proportion of loose flowers sold was about same as last year. Had trouble to get flowers from other cities. Every florist had all the work he could do. Could not fill all orders. The best Easter trade we ever had.
